Within the last few weeks the Governor has made use of his executive power for an act of clemency which should entirely exonerate him from your charge of conniving at race oppression. Two negroes were convicted of murder; they had "lynched" a white man who, they were informed, had criminally assaulted a colored girl. His Excellency did not *commute* their punishment, but gave them full and free pardon, and on the ground that they were negroes. I venture to say that no white man convicted of applying lynch law in this State will ever be treated with the same clemency.

Again, in a recent case here, two negroes, Fraser and Criss, were tried and convicted of murder, under the following circumstances: They went together into the grocery shop of a respectable old German one Saturday night. While Criss engaged the attention of the proprietor in the back part of the store, Fraser seized the money box. He was detected by the old man and his daughter, who happened to come in at that moment, whereupon Fraser fired first at the woman, without effect, and then fired on the man, killing him in two shots. They then retreated with their plunder. They were both arrested within a few hours while making their way from the city. Each one was taken with a pistol on him and money answering the description of that stolen (a preponderance of small change, one-cent pieces, etc., as is commonly taken in on Saturday nights by shops of that class). They both confessed the facts substantially as above, but Criss claimed that while he did enter into the conspiracy to rob, he had not conspired to kill. He further claimed, but failed to adduce any evidence, that he had purchased the pistol found upon him after the killing. The judge charged the jury that there must be something more than the fact of Criss's presence to make him guilty of the murder; that he must at least have known that Fraser was armed and would have taken life, if necessary in the accomplishment of their joint purpose. The jury found both guilty and they were sentenced to be executed; but the Governor commuted Criss's sentence to imprisonment for life, and Fraser, a few days since, alone suffered the extreme penalty of the law. Instances like these indicate that Governor Richardson's tendency is to be lenient to a race whose moral and intellectual nature and development are inferior to those of the white man.

I admit that white men are slow to convict a white man charged with killing a negro, but it is sometimes done, as shown by the case of Marshall Amaker above noticed; but, so far as the charge of oppression of the negro by hasty and improper convictions is concerned, my experience is that the white men of South Carolina, as jurymen and as officers administering the law, are absolutely and entirely free from such aspersion. On the contrary, nine negroes out of ten who are tried for the graver offences themselves exclude their own color from the jury-box, and prefer to leave their fate in the hands of their white fellow-citizens.

Respectfully, W. St. Julien Jervey.

Charleston, S. C., April 27, 1889.

[The additional facts relating to Marcus Horlbeck, though interesting as giving a full statement of the case, do not meet the point of our criticism. The law knows no such verdict as that of Probably Guilty, which was rendered in this case. The jury have said, in effect, that whether the prisoner was guilty or not they did not know, as the witnesses were unworthy of belief; but as he seemed to be a disreputable fellow, it would be well to shut him up. Whether the same decision would have been reached in the case of a white man cannot be told, but the reports we have been quoting from do not show any such cases.—Ed. Nation.]

"ANTIGONE" AT SWARTHMORE.

To the Editor of The Nation:

Sir: Perhaps you may feel willing to chronicle, in the interest of classical scholarship, the performance recently, at Swarthmore College, of the "Antigone" of Sophocles in the original Greek. It was presented by young women, members of the "Somerville Literary Society," at their annual reunion, and was considered such a success that it was repeated later before the entire college and a number of invited guests. The costumes worn were from classic models, and those of the leading performers were of great beauty. The actors delivered their lines with great force of expression, and the choruses were sung to music selected for the occasion. The entire performance was characterized by grace, dignity, and beauty, and was a delight both to the eye and ear. While listening to the melodious language and gazing at the succession of beautiful groupings presented during the several scenes of the play, one could not but be impressed with the perennial beauty of Greek ideas and their dominant influence in the realm of the æsthetic. If we could have more work of this sort done at our colleges, would it not be of service, not merely in stimulating their students in their Greek, but in interesting those outside of academic circles, many of whom are inclined to look with disfavor upon the study?

W. H. Appleton.

Swarthmore College, May 3, 1889.

A HARD CASE.

To the Editor of The Nation:

Sir: Has the wretched contributor no rights that magazine adventurers are bound by law to respect? Is there no redress for wrongs done the wretched contributor?

A magazine has lately "failed" in New York. It "failed" owing its wretched contributors for the three last months of its existence. Not only that, but it failed with quantities of MS. on hand, examined and unexamined. These MSS. are heaven only knows where, for the "management" utterly ignores all letters concerning them and requests for their return. Can nothing be done under such circumstances besides holding such "management" up to the contempt of all honorable men?

A year and more ago an article was published in said magazine with illustrations. The article cost its writer a journey, hotel bill, and two days of steady work. The water-color sketches were from nature, by an artist of some repute, and cost the writer of the article ten dollars apiece, being four in number. When the article was published, the artist's name was found to be carefully erased from the drawings and that of one of the magazine's job-workers inserted in its place. For the manuscript and sketches the contributor received a check, three months after publication, for *fifteen dollars!* C. H. W.

Notes.

D. Appleton & Co. have in press or in preparation 'The Garden's Story; or, Pleasures and Trials of an Amateur Gardener,' by George H. Ellwanger; and 'Days out of Doors,' by Dr. Charles C. Abbott. They have just issued a "centennial inauguration edition" of their useful 'Dictionary of New York and Its Vicinity,' the eleventh revision, in which even a superficial glance discovers a close bringing down to date.

Chas. Scribner's Sons will soon publish the second volume of Prof. Chas. W. Shields's 'Philosophia Ultima'; and 'Progress of Religious Freedom as Shown in the History of the Toleration Acts,' by the Rev. Dr. Philip Schaff.

Ginn & Co., Boston, will add to their "Library of Anglo-Saxon Poetry" Cynewulf's 'Elene,' edited by Prof. Chas. W. Kent of the University of Tennessee.

John C. Nimmo, London, is bringing out in four volumes a second edition of S. Laing's translation of the 'Heimskringla,' revised and annotated by Prof. Rasmus B. Anderson, lately United States Minister at Copenhagen. Only 520 copies are printed, and these from type.

"Nineteenth edition" is stamped on the title-page of a new issue of the late William A. Wheeler's 'Dictionary of the Noted Names of Fiction,' etc., a reader's hand-book which first appeared in 1865 and was at once welcomed (Houghton, Mifflin & Co.). Mr. Charles G. Wheeler, a nephew of the compiler, has now added an appendix, which not merely is measurably a continuation to date, but repairs omissions in the body of the work, as appears from such entries as Abou ben Adhem, Baalam's Ass, Banker Poet, Black-eyed Susan, Jim Crow, Sword of Damocles, Gordian Knot, Cranes of Ibycus, Jewels of Cornelia, Lever of Archimedes, Tom Brown, Handy Andy, Midshipman Easy, Eva (in 'Uncle Tom'), etc. All George Eliot's prominent characters and some of Dickens's are cared for; Dr. Jekyll and Mr. Hyde and Robert Elsmere are admitted, while "She" is ignored. In American fiction, Elsie Venner keeps company with Daisy Miller, but we have looked in vain for Silas Lapham or any character of Howells's, or for Aldrich's Marjorie Daw. Uncle Remus is in his place. Among the new pseudonyms are the Autocrat, Josh Billings, Charles Egbert Craddock, Mark Twain, and P. V. Nasby. Political terms, like Bloody Shirt and Mugwump, are recorded. Much might be said concerning omissions, as in the case of Dumas and Victor Hugo, both neglected by the elder Wheeler; and Turgeneff and Tolstoi, unknown to the younger, who misses Anna Karénina along with Bazaroff. The index to the real names of pseudonymous characters has not been enlarged to take in the appendix, as it should have been. On the whole, the new portion, though useful as far as it goes, can hardly be called a first-rate performance.

T. A. Archer's 'Crusade of Richard I.,' in the admirable series called "English History from Contemporary Writers" (Putnams), for which no words of commendation are required from us, must be one of the most popular. Its execution is certainly all that could be desired. It could not have been difficult to make interesting selections to illustrate an event so conspicuous and romantic as the Third Crusade; but all the accessories—notes, tables, bibliography, illustrations, and historical introduction—are of the best. Every reader of Scott's 'Talisman' ought to read these selections. He will find, we think, that, whatever may be the errors of the novelist in detail, the spirit of the times is well maintained.

The Tenth Census is at last completed by the publication of two volumes, xxi and xxii, of no little interest in very different ways—the first dealing with the Defective, Dependent, and Delinquent Classes; the second with Power and Machinery employed in Manufactures, and the Ice Industry. Mr. Frederick H. Wines is the competent special agent responsible for the social statistics of vol. xxi. In vol. xxii, Prof. Wm. P. Trowbridge has looked after power and machinery, and Mr. Henry Hall after the ice business—a relatively short chapter; both topics are illustrated. We reproach ourselves with not having acknowledged sooner the appearance also of vol. xvii, the second on Water-Power, by Mr. James L. Greenleaf; and of vol. xix, the second of Col. Geo. E. Waring, Jr.'s report on the Social Statistics of Cities, comprehending the Southern and the Western States. In both these instances, also, illustrations abound.

Speaking of cities, we may here call attention to the document emanating from the State Board of Health on the 'Potable Water Supply of the City of New York.' Text and maps are supplemented by a large series of drawings from photographs indicating the sources of pollution on the borders of the tributary watercourses. The demonstration is complete.

The picturesque and architectural aspect of this metropolis is well caught in a volume of albertype views styled, somewhat oddly, 'Select New York' (Adolph Wittemann, 58 Reade Street). As in the case of smaller albums from the same publisher which we lately noticed, these plates are more admirable in the choice of subjects and point of view than in the mechanical execution. They are "instantaneous," and may possibly have undergone enlargement.

The *Technology Architectural Review* closes its first volume with No. 8, in which the several *projets* illustrated by the drawings are an Italian villa, a reformatory prison, an art-club building, and a Doric doorway—this last, one of Mr. Emmanuel Brune's exceptionally able renderings. Hereafter the letterpress will take on a greater importance, including letters from travellers in foreign parts, series of original articles, translations from the French, etc. The Rotch Trustees will make the *Review* the medium of publishing the *envois* of the *pensionnaires* of its travelling scholarship. The success of this periodical has been most creditable and gratifying, and, in connection with that sterling weekly the *American Architect*, the *Review* fixes the reputation of Boston as the seat of the profession on the side of training, learning, literary expression, and *esprit de corps*.

The singular *Magazine of Poetry*, "a quarterly *review*," as it purports to be, has reached a second number (Buffalo: Chas. Wells Moulton). It tickles the love of notoriety of all the poetasters, by giving respectful or laudatory biographical accounts of them, printing gems from their verse, and engraving their likenesses. They vary in degrees of good and bad, and what the total effect on the taste of subscribers must be we will not undertake to say.

A publication remote of kin to the foregoing comes to us from the other side of the Atlantic—*Men and Women of the Day*, "a pic-

ture-gallery of contemporary portraiture" (London: R. Bentley & Son). But the aim and the execution are higher. In the April number, Mr. J. L. Toole, the famous comedian, Miss Mary Moore, one of the younger actresses, and Sir Edward Watkin, M. P., the railway magnate, are severally portrayed in permanent photography on a large scale, with readable sketches of their lives. The fifteen earlier issues have embraced Cardinal Newman, Gladstone, Hartington, John Morley, Lubbock, Tennyson, Browning, Chamberlain, Spencer, Hallé, Ellen Terry, the Kendals, Bright, Ruskin, Mme. Schumann, etc., etc.—a series of no mean value for time present and to come.

The fourth number of the *Green Bag* (Boston: Chas. C. Soule) has an article on the Columbia Law School with many portraits, and a sketch of the late Sidney Bartlett, the Nestor of the American bar, together with his portrait. Some of the general statements as to Mr. Bartlett's age, undiminished intellect, and uninterrupted practice of his profession are too sweeping, and overlook the closest and nearest parallel in the person of the late Samuel E. Sewall of Boston.

The prospectus of the *Bibliotheca Platonica* is before us; its chief aim is announced to be "the critical and philosophical examination and interpretation of the writings of Plato, Aristotle, and the neo-Platonists." The editor-publisher will be Thos. M. Johnson of Osceola, St. Clair Co., Missouri. "Papers may be written either in English or Latin."

Trübner's Record, entering with No. 243 on a third series, proposes to expand its original design as a journal devoted to the literature of the East, by "assigning ample space to literary and scientific articles on subjects within its scope," under the editorial direction of Dr. Rost of the India Office. Reviews will be more extensive, and there will be periodic statements of the advance made in the various fields of Oriental research. Provisionally, six numbers will be issued yearly, till a monthly issue is warranted. In the present number we remark Prof. Charles Lanman's reception by the Bombay branch of the Royal Asiatic Society on January 16, he being the first of American Orientalists to visit the Society; a review of Sir Monier Monier-Williams's recent work on Buddhism; E. Forchhammer's description of the remains of Pagan in Ava, and other interesting matter.

At the recent excavations at Platæa in Greece, under the auspices of the American School of Classical Studies at Athens, a large fragment of a Latin inscription was found. Prof. Tarbell, the Annual Director of the School, finds that this contains part of the famous Edict of Diocletian *de pretiis rerum venalium*. The two copies of this preamble already known are imperfect, and the new-found inscription will fill some of the gaps. All the fragments of Diocletian's Edict hitherto found in Greece have been in Greek.

— The *Atlantic* for May is most noticeable for its leading article, the beginning of Mr. Bynner's novel of Knickerbocker life, which, from its first pages, shows a fresh and truly original strain, and has a vigor and attractiveness that must win readers, apart from its local and antiquarian interest. The staying power of his Knickerbocker dialect, however, has certainly yet to be tested, for it labors heavily under its uncouthness. The solid paper, and a very excellent one, is Mr. Clark's temperate and able discussion of the uses and limits of temperance legislation. It comes a little late into the arena of practical politics, but it may serve as a storehouse of reasons after the fact to those who defeated the amendment in Massachusetts, and represents probably with considerable fulness the sound sense of the real situation, and the practical counsels which guided the thinking voters in the recent contest. It is not local in its interest, nevertheless, and may be recommended to friends of temperance legislation in every State as a careful brief summary of opinion and suggestion upon the general topic of the reform. John Fiske writes with even more than his usual brilliancy and force of the battles of Brandywine and Germantown, and of the fate of Burgoyne. A very charming piece of sentimental travel, apropos of Goethe and Frederika, is contributed by Bliss Perry, who makes Sesenheim attractive for pilgrims. Prof. Royce begins a series of reflections upon the state of society and its development in Australasia, and in the first paper brings out the characteristic difference between the State-growth in Australia and this country; the main trait being the dependence of the colonies on Government and its probable more socialistic results.

— *Harper's* opens with a new chapter of Russian life, which is a pleasing change from our usual diet, introducing its readers to the court festivities at the Winter Palace, the salons, and clubs of the city of the Neva, and the amusements of society generally on its quays and in its environs. The sketch is admirably proportioned, and seems extraordinarily true to the facts of human nature that lie behind the trappings and the circumstances. The Russian temperament itself, as one gets at it in the best imaginative work of Russian literature, is presented with a penetration and almost an artistic feeling that quite differentiate this article from the class of superficial or perfunctory subjects in which expectation would place it, and make it really luminous with knowledge. The Tartar base in this world, the sensuousness of it on the physical side, the militarism of it on the social side, the contrast of its tropical and warmly colored interior with its frozen environment, are brought out not by emphasis and forethought, but as naturally as in a photograph, and the whole effect hangs together like life. In the remainder of the number, perhaps the most interesting contribution is Mr. Blowitz's tale of how he got the text of the Berlin Treaty for the London *Times*, in which his unconscious portrait of himself is not the least entertaining matter. Mr. Brander Matthews's survey of the present state of play-writing exhibits thorough acquaintance with a subject somewhat difficult to handle; and since his favorable augury for the future of the drama is based upon such excellent observation, we may take more comfort of it than we usually do in such prophecy. Mr. Stedman told us some time ago that we were to have dramatic literature in America next, but it has not yet put in an appearance. The paper on the Royal Academy has several good portraits, and in the text there is interesting artistic reminiscence.

— *Scribner's*, in the first of its sporting articles, delights the eye with a profusion of softly-toned or picturesque illustrations of wild water and headland, with a fish or two for spoil; but the descriptive paper suggests a time and place when one is glad to read what he can get, and has plenty of leisure to devour his findings. Mr. Eugene Schuyler contributes the inevitable Russian topic, dealing with Tolstoi twenty years ago, at which time the writer visited him upon his estates. The prefatory part, describing the home and manners of Prince Odóiefsky and Princess Olga, being more fresh and showing a phase of Russian civilization of which we hear too little in proportion to the rest of what we learn of the country, is more entertaining. Of Tolstoi there is nothing specially new in this new glimpse, but doubtless in the succeeding paper his personality will be more felt. It is worth noting that Mr. Schuyler corrects the current impression that the series called 'Childhood, Boyhood, and Youth' is autobiographical; he says that Tolstoi denied that there was "the slightest" vein of that interest in those sketches. The Freight Department, in the railroad series, is despatched in the thorough and solid treatment which has characterized this entire block of articles; and the subject of Photography is written of by Prof. Trowbridge, in not too technical a way, and with the aid of several striking illustrations, especially of surf and fire. Mr. Mabie's critical summary of the literary form of fiction is an unusual example of how tightly a man may bind himself to the wheel of the Juggernaut of the hour, from which he is very likely to escape only with broken bones. The interesting final articles, which are one of the most attractive features of the magazine, are represented by a paper of some brief reflections by Prof. Norton upon the lack of old homes in America, a characteristic of the country which he treats of almost entirely on the social side; but it is to be remarked that if there are necessarily few old homes among us, the tradition of New England breeding has not been broken to anything like the extent which might be inferred: the new hearths are kindled from old fire.

— The *Century* devotes much space to the Samoan question. Mr. Whitaker describes the islands of the Navigators' group and the customs of the natives, and, by the assistance of several illustrations, succeeds in giving ample information upon both branches of his subject. The people are represented as a faithful, simple, and gentle race, of whom the deposed king, Malietoa, is a more developed type. Mr. Bates, in his article, is appreciative of the good qualities of the natives, and more particularly of their chief, to the point of enthusiasm; he was especially struck by the warrior type, such as Asi and Seumana, of the latter of whom he says that, "taking in the whole range of physical, mental, and moral attributes," he seemed "a man of as fine nature as can be produced anywhere." Malieota is represented as an entirely unselfish man, who, through Christian influences, is completely absorbed in the welfare of his people, and is only to be reproached, if at all, for the too great willingness he showed to abandon his own kingship among them, in the hope that they would be relieved from injury and suffering and prosper better under a civilized protectorate. The sketches of the character and disposition of these native chiefs, however they may be flattered by consideration and sympathy in the mind of the writer, are useful and instructive; the mere fact that the Samoans are capable of exciting such interest and sympathy speaks well for them, and in their history they have not evinced the savage nature. A third article contains some documents relating to our introduction to the islands in 1875. The three together make a kind of brochure of the main points at stake in the Conference now in session. The other noticeable contribution is one of reminiscences about Millet, in which we come very close to the home life, the habits, and the temperament of the artist, in himself one of the most attractive modern figures in art; and the sketches, here reproduced, of his drawings for his children, are a delightful bit of autobiography.

—It is with regret that we announce the decease, on April 19, of our able and esteemed English correspondent, Colonel Robert Durie Osborn. Col. Osborn, an officer of the Eleventh Bengal Cavalry, after being in the thick of the Indian Mutiny of 1857, retired from active service several years ago on the pension of his rank, and returned to England. A fluent, graceful, well-informed, and, for the most part, foresightful writer, and withal indefatigable, he was long a valued and copious contributor to periodical and journalistic literature in India and in England, as also, to some extent, in this country, as the *North American Review* and our own columns bear witness. He was, besides, the author of 'Islam under the Arabs' and of 'Islam under the Khalifs of Baghdad,' two volumes alike eminently readable and of sterling merit, which we reviewed in 1878. His death was at once sudden and peculiar. Lawn tennis, at which he was a practical adept, and on which he published an authoritative manual, was his favorite outdoor recreation. As a member of the Hyde Park Lawn Tennis Club, he was engaged in playing a match with Mr. James E. Renshaw, the champion tennis-player of all England, when he staggered, fell, and expired without speaking in the course of five minutes; the cause of his death being syncope, induced by undue exertion combined with the great heat of the day. His age was fifty-three. He is survived by a wife and two daughters.

RECENT ENGLISH POETRY.

THERE is something of interest in comparing even the second-class poetry of two kindred nations—England and America, for instance—as it reveals itself by monthly instalments to the long-suffering critic. In the English volumes there is apt to be more of smoothness, or, rather, when this quality is wanting, it is more generally the result of waywardness, not of ignorance. There is generally more of classical allusion—more that is religious, or at least churchly—and more that is the fruit of foreign travel, this last often redeeming a volume otherwise flat or tedious. On the other hand, the American book is apt to have a little more freshness of impulse and motive, a more salient personality, more that speaks of new scenes and fresh life—and, on the whole, when the balance is struck, more of vitality. The American harvest, however, shows greater extremes of crudeness, and consequently of affectation, than the English; and we have before pointed out that, the more inexperienced an author, the more apt he is to give high-sounding names to his heroes and heroines. It is further to be noticed that the American poet, and especially the frontier poet, while not more imitative than his English contemporary, is apt to be a generation behind him as to his school of taste, and still bores us with Poe and Swinburne, while the Englishman only bores us with triolets. On the whole, it must be conceded that, while it is a matter of serious fatigue to spend an evening among second-rate Americans, even in books, the same time given to second-rate Englishmen is often a worse infliction. If we cannot change the *animum*, in such cases, it is a temporary alleviation to have changed the *coelum*.

The high-water mark of second-class London poetry is attained, doubtless, when we have a new volume by Andrew Lang. Yet no one illustrates better the limitations of London life—its hurry, its swift transitions, its shallow use of what might seem great opportunities. Mr. Lang, tested at almost any page of his 'Grass of Parnassus' (Longmans), holds his lineage from the delicate whipped syllabub of Leigh Hunt rather than from the traditions of any stronger poet. His writings offer to us the highly wrought surface of a rather trivial intellectual experience; they sound no depths, and suggest those libraries which are chiefly interesting because they hold masterpieces of binding. It seems an odd meeting of extremes when we find a poet so dainty praising the cheap extravagances of Rider Haggard; but both are equally the fruit of a somewhat monotonous period, and of a metropolitan life that is limited by its very excess of opportunities—by the way in which one hurries from one London exhibition and dinner-party to another, bringing away nothing but a few anecdotes. Mr. Lang was born to translate old French verses, though he draws from the whole of them less of wealth than Keats put into his single unfinished sonnet from Ronsard; and he was born to translate Meleager, but not Homer's 'Odyssey,' which he should leave to Professor Palmer. After all, it is when he is furthest from London and Oxford that he is at his best, as in his graceful "Scythe Song":

SCYTHE SONG.

Mowers, weary and brown and blithe,
What is the word methinks ye know,
Endless over-word that the Scythe
Sings to the blades of the grass below?
Scythes that swing in the grass and clover,
Something, still, they say as they pass;
What is the word that, over and over,
Sings the Scythe to the flowers and grass?

Hush, ah, hush! the Scythes are saying,
Hush, and heed not, and fall asleep;
Hush, they say to the grasses swaying,
Hush, they sing to the clover deep!
Hush—'tis the lullaby Time is singing—
Hush, and heed not, for all things pass.
Hush, oh, hush! and the Scythes are swinging
Over the clover, over the grass! (P. 55.)

Mr. Lang is almost always careful about his literary execution—unlike his friend Mr. Haggard—although he rhymes "again" with "rain" and "vain." For this he has Lord Tennyson's example; but when the Hon Roden Noel, in 'A Modern Faust, and Other Poems' (Scribner & Welford), rhymes "color" and "corolla," it is certainly a strain upon the ear. Mr. Noel does not, however, float willingly upon the surfaces of life; he grasps the myth of Faust, but does it feebly, and no Helen of his, any more than of Mr. Lang's, would ever fire the topmost towers of Ilium. Neither the verse nor the prose of this conglomerate romance affects the reader with a sense either of power or of clear vision; but there is real sympathy with human suffering and a generous optimism. Here, too, as with Mr. Lang, the author is at best in the country; and "The Merry-go-round at Fowey" (p. 224) is really a charming glimpse of the better side of that English rural life which is beginning to assume for us such grim aspects.

Mr. Alfred Austin, in 'Love's Widowhood, and Other Poems' (Macmillan), rises a little above the smooth commonplace of his earlier volumes, and in the poem called "Two Visions" (p. 109) touches with some strength, though with many halting lines, the great social problems. Mr. Arthur Symons, whose name is less known to us than those preceding, writes a volume which should make him better known, under the rather vague title 'Days and Nights' (Macmillan). He dedicates it to Walter Pater, which is something—for we judge of an author partly by his sponsor—and although he too must have his share of Helena and Faustus, and of French translations, he puts really solid and imaginative poetic work into his pictures of life. The poems "Esther Bray," "Red Bradbury's End," "An Interruption in Court," and, above all, "The Knife-Thrower," have the strength of Tennyson's, or even of Browning's, rustic tragedies; and for a piece of condensed and terrible vividness, take this:

THE OPIUM-SMOKER.

I am engulfed, and drown deliciously.
Soft music like a perfume, and sweet light
Golden with audible odors exquisite,
Swathe me with cerements for eternity.
Time is no more. I pause and yet I flee.
A million ages wrap me round with night.
I drain a million ages of delight.
I hold the future in my memory.

Also I have this garret which I rent,
This bed of straw, and this that was a chair,
This worn-out body like a tattered tent.
This crust, of which the rats have eaten part,
This pipe of opium; rage, remorse, despair;
This soul at pawn and this delirious heart.
(P. 18.)

Other late English and Irish poems need not detain us so long. Jeanie Morison, whose long poem 'The Purpose of the Ages' was reviewed in these columns, now writes a shorter one, 'Gordon, an Our-Day Idyll' (London: Kegan Paul). Many English poets have tried their hands on General Gordon, whose pathetic death made him more a hero—that, and the political use to which it has been turned—than his continued life might have done. To us in America, accustomed to the quiet and reticent heroes of our own civil war, there was something a little turgid and melodramatic about Gordon; and it is not fair, perhaps, to complain if this book has something of those qualities. Another Englishwoman, Caroline Fitz Gerald, sings a song of Venice in 'Venetia Victrix' (Macmillan), and with more sustained and even vigor; she dedicates her book "To my friend Robert Browning." Two poets handle the thoroughly poetic traditions of the Irish Bardic period, Mr. W. B. Yeats, in 'The Wanderings of Oisin' (Kegan Paul), and Dr. John Todhunter, in 'The Banshee, and Other Poems' (Kegan Paul); the chief part of this last volume being, however, given to the beautiful legend of "The Doom of the Children of Lir"—the children changed to swans—a legend already so admirably rendered by Aubrey de Vere that every other versifier is at a disadvantage. The same disadvantage extends, though less directly, to Mr. Yeats's 'Oisin,' but some of the shorter poems have remarkable dramatic power. There is plenty of vigor, also, if carrying a little sense of impetuous exuberance, in Mr. Wilfrid Scawen Blunt's 'In Vinculis' (Scribner & Welford). The sonnets written in jail have also a defiant quality which the author's prefixed portrait does not belie. The following was actually written in Galway or Kilmainham jail, upon the fly-leaf of the author's prayer-book:

SONNET.

A prison is a convent without God—
Poverty, Chastity, Obedience
Its precepts are. In this austere abode
None gather wealth of pleasure or of pence.
Woman's light wit, the heart's concupiscence
Are banished here. At the least warder's nod
Thy neck shall bend in mute subservience,
Nor yet for virtue—rather for the rod.

Here a base turnkey novice-master is,
Teaching humility. The matin bell
Calls thee to toil, but little comforteth.
None heed thy prayers or give the kiss of peace.
Nathless, my soul, be valiant. Even in hell
Wisdom shall preach to thee of life and death.
(P. 5.)

Another of those who are born to translate French poetry is Mr. W. J. Linton, who must now be ranked as an Englishman again, we suppose, and whose thick volume of 'Poems and Translations' (London: Nimmo) is beautifully printed, and is prefaced by an admirable likeness of the author. Yet he fails in his Béranger—almost as untranslatable among the moderns as Horace among the ancients—and is best with the older French verse. His own English poems have a fair amount of ease and smoothness, but add little to our stock of thought. Dr. Thomas Campion's 'Works' appear under the editorship of Mr. A. H. Bullen (London: Chiswick Press), who had previously celebrated this author in his 'Lyrics from Elizabethan Song-Books,' long since eulogized in these columns. Mr. Bullen does well to give us the

whole works of this poet, undoubtedly the best of his Elizabethan "finds," but, after all, he gave us the cream of Campion before. One attractive feature of the present volume is the full text and stage business of many of those curiously elaborate masques of which the Elizabethan era was so prolific. Mr. Frank T. Marzials, in his 'Death's Disguises, and Other Sonnets' (London: Walter Scott), represents what may be called the Grosvenor Gallery school of younger English poets, whose ink is constantly intermingled with painters' pigments. His "sonnet-songs" are a pretty experiment, not quite successful. In any collection of William Allingham's verse, 'Flower-Pieces, and Other Poems' (London: Reeves & Turner), one inevitably turns first to the striking poem of "The Touchstone" (p. 127), which Emerson applied to Capt. John Brown, and which appears here with one closing verse not included by Emerson, and scarcely strengthening it:

"North, south, in rings and amulets
Throughout the crowded world 'tis borne;
Which, as a fashion long outworn,
Its ancient mind forgets."

The volume gains added value from including two designs by Rossetti, to whom it is dedicated. 'A Reading of Earth,' by George Meredith (Macmillan), has that author's accustomed rude strength, but contains no single poem to be compared with "The Nuptials of Attila." Mr. William Sharp, well known as an editor of sonnet literature, publishes a second edition of his striking 'Romantic Ballads' (Walter Scott), with a valuable preface, in which he predicts a reaction in favor of romanticism as opposed to the realistic school. 'Leaves of Life,' by E. Nesbit (Longmans), draws its title from the well-known line in Omar Khayyám; the author is evidently a woman, and writes with strength and much feeling. The 'Poems' of the late Dora Greenwell, dear to many hearts through her "Patience of Hope," are reprinted in the "Canterbury Poets" series (Walter Scott), and have a uniformly elevated and serene, sometimes mystical quality; her biographer, Mr. Dorling, indeed, calls her "The Last of the Mystics" (p. xv). In 'Chess, a Christmas Masque,' by Louis Tylor (London: Unwin), we have an elaborate and somewhat perplexing allegory of white pawns and black, white and black bishops—something between a newly-discovered poem by George Herbert and a hitherto unpublished chapter of 'Alice through the Looking-Glass'; but the moral significance is good, and so sometimes is the poetry.

It is unnecessary to go back and reassign the precise poetic character of Lewis Morris's 'Epic of Hades,' which has now reached its twenty-fifth edition (Boston: Roberts), and still less that of Wordsworth, a thin volume of whose poems thus tardily appears, the first book of the first part of his 'Recluse' being now for the first time published *in extenso* (Macmillan). It gives a curiously mingled sensation—as if Mr. Edward Bellamy's hero, instead of stepping forward, had stepped backward, to be reading Wordsworth's early blank verse as if it were a newly published book. On the whole, it stands the test. There is something curiously archaic here and there in its language: an Alpine valley is "some Helvetian Dell" (p. 32), a gun is "the deadly tube" (p. 18); these, and the use, in quite the American sense, of "I guess" (p. 17), carry us back to the transitional literary period from which Wordsworth emerged. On the other hand, the beautiful tribute to his sister takes us back to that morning of their existence when their lives were one:

"Mine eyes did ne'er
Fix on a lovely object, nor my mind
Take pleasure in the midst of happy thoughts,
But either She whom now I have, who now
Divides with me this loved abode, was there
Or not far off. Where'er my footsteps turned,
Her voice was like a hidden Bird that sang,
The thought of her was like a flash of light
Or an unseen companionship, a breath
Of fragrance independent of the Wind." (Pp. 6, 7).

SOME GERMAN BOOKS.

Geschichte der Alten Philosophie. Von Dr. W. Windelband. Pp. 222. Nördlingen: C. H. Beck. 1888.

System der Ethik. By Friedrich Paulsen, Professor at the University of Berlin. 8vo, pp. 868. Berlin: Wilhelm Hertz. 1889.

Grundrtss der Romanischen Philologie. Herausgegeben von Gustav Gröber. III. Lieferung. Strassburg: Karl J. Trübner. 1888.

Kurzgefasste Albanesische Grammatik, mit Lesestücken und Glossar. Von Gustav Meyer. Leipzig: Breitkopf & Härtel. 1888.

Die Entstehung der Deutschen Stadtgemeinde. Von Dr. Georg von Below. Düsseldorf: Voss & Cie. 1889. Pp. xi, 126.

UNDER the general title, "Handbuch der Klassischen Alterthums-Wissenschaft in Systematischer Darstellung," a German publisher has undertaken a critical survey of all we now know about ancient Greece and Rome. The work, already more than half complete, will be finished during the present year, and will consist of twenty stout volumes, costing in Germany about thirty dollars. Prof. Müller of Erlangen is the general editor. Under him work thirty-five special scholars, who treat of Greek and Roman philology, hermeneutics, palæography, epigraphy, chronology, grammar, lexicography, rhetoric, metric, geography, history, antiquities, physical science, philosophy, mythology, religion, fine arts, literature, and the drama. Each author's work is complete in itself and in many cases may be had separately. The section on philosophy, by Prof. Windelband, forms the latter half of Part 1, vol. v, and is published in its independent form at four marks. For this work Windelband has postponed the completion of his history of modern philosophy.

A discussion of Greek philosophy so brief and so masterly deserves to be widely known, and ought soon to be translated into English. Until very recently no competent handbook of the subject has existed in English. Zeller's monumental history, three-quarters of which has been published by Longmans, is too large and too much burdened with notes to be readily serviceable either for reading or teaching. Mayor's 'Ancient Philosophy,' remarkable as it is for precision of statement, is slender and ill-proportioned. The distended volumes of Benn's 'Greek Philosophers,' and especially of Archer Butler's 'Lectures on Ancient Philosophy,' explain their author's beliefs better than they do those of ancient times. Ferrier's 'Lectures on Greek Philosophy' has a unique worth as the attempt by a man of distinct philosophical and literary genius to state in modern terms the crucial points of the Greek teaching. But swiftly enlightening as Ferrier's inspired fragments are, they do not pretend to display the detail of Greek speculation. Two years ago Zeller published, both in German and in English, an admirable condensation of his great history; and this little book (Henry Holt & Co.) is likely for some time to be the one from which American college students will most wisely learn. The Germans are better off than we. Apart from their many excellent general histories of philosophy, which supply in the early sections some account of the philosophy of Greece and Rome, writers like Brandis, Strümpell, Prantl, and notably Schwegler, have devoted special treatises to the history of Greek philosophy and have produced brief books of great value.

None of these, however, covers precisely the ground of Windelband. His history is not a guide for beginners. It appeals rather to that large body of classical scholars who already possess a tolerable acquaintance with the current facts of Greek opinion, and who now need instruction in the significance of these facts. What doctrines did Heraclitus, Aristotle, Plotinus, hold? This is the learner's first question, but it should not be his last. One may be able to answer it pretty accurately, and still have little understanding of the philosophies of these men. Understanding means knowledge of relations. The relations which a doctrine bears to the rest of the system in which it is imbedded; the relations which that system as a whole, modified by circumstances in the life and times of its author, bears to the others which make up with it a single evolutional line or school; the relative importance of this school system or single doctrine, as estimated by its influence over subsequent thought and over the beliefs of to-day—it is with these three sets of relations that the higher criticism concerns itself. Of this higher criticism Windelband is a master. Subordinate questions he does not despise: they find their place. The historical evidence which leads us to attribute a certain belief to a certain philosopher, Windelband weighs scrupulously and with a singular lack of partisan spirit. But he never treats beliefs as isolated facts. In his view they are growths—growths of both logic and circumstance.

Short as his book is, in no history of philosophy with which we are acquainted is greater skill shown in tracing the lines along which growths proceed. Each system is treated as a living organism, part influential over part, the whole having its roots in the past and its fruits in the future. That students will often dissent from the proposed interpretations is matter of course. Some will regard Democritus as a teacher of less weight, Pythagoras as one of more, than Windelband believes him to have been. Some will quarrel with the estimates of the sophists or of Epicurus. But all will recognize the patient, unwilful, discerning, and constructive scholar, who can freshly fix attention upon well-worn themes, and who can say much of consequence about them in a little space. Elaborate bibliographies, referring chiefly to German and French sources, show the large learning of the author, and add greatly to the value of the book.

An interesting and symptomatic feature of Prof. Paulsen's 'System of Ethics' is the use of medical terms and analogies in defining the nature of ethics. There are no pretensions of building the science upon a physiological foundation; the completeness of its historical and psychological analysis of ethical problems relieves the work from any such suspicions. But use of physiological conceptions, whether consciously or unconsciously, at the very basis of the subject, has some significance when we are reminded of the fact that Prof. Paulsen, like all later German philosophers, began with physiology and is thoroughly familiar with its principles. The fact is, that ethics is likely to undergo a process of gradual regeneration from the influence of physiological investigations in Germany, and the present work bears some more or less remote indications of the change. The historical chapters are brief and new. Theoretical discussions are cut short, and criticisms show the same excellent taste in omitting questions discussed by others, and in presenting the additional reflections of the author. Another value

is the direct treatment of actual problems which concern the life of the age, and this is a departure from the high transcendentalism of most German ethics. In this line is a long and interesting chapter on "Socialism and Social Reform," in which it is quite evident that some concessions have to be made to the Government's power to restrict freedom of speech. The chapter on the emancipation of woman betrays the usual German lack of chivalry. No defence of woman's rights is needed, but a country which tolerates hitching a dog and a woman to a cart while the husband walks leisurely behind, and everywhere imposes upon the weaker sex the undignified forms of labor, ought to find in its moralists some readiness to remonstrate against the customs of savages. On the whole, the book is fresh and suggestive, and while there is high scholarship in its style and matter, ethical problems are brought within the comprehension of almost every one.

The number before us closes the first volume of Gröber's 'Grundriss'—a handsome and exceedingly solid volume of nearly 900 large and closely printed octavo pages. This is by far the most important work which has yet appeared in the field of Romance philology, and contains, as far as it goes, pretty well the latest data of the science. The names of the distinguished "Romanisten" (there are twenty-nine of them) associated with the editor are a guarantee for the value and reliability of the work. The contributors, with the exception of two or three scholars of Southern Europe (Italian, Spanish, and Portuguese), are all Germans. It is a pity that some of the leading French scholars in this field, *e. g.*, Gaston Paris, Paul Meyer, Arsène Darmesteter, are not represented.

The present *Lieferung* continues the detailed treatment of the individual Romance languages, commencing with the Italian, which, at the hands of Francesco d'Ovidio and W. Meyer, receives in its phonetics the most exact and scientific treatment it has ever had. Its morphology and dialects are also well handled. The largest section of the present part is devoted to "die französische und provenzalische Sprache und ihre Mundarten," by H. Suchier. The treatment is analytic and rigidly scientific. The geographical speech divisions are first considered, then the phonetic system of the *Schriftsprache*, in two divisions, first up to the twelfth century, and then from the thirteenth century down; and next the phonetics of the dialects. The work is, of course, masterly in its grasp of details, and invaluable to the specialist for reference. A few more generalizations and simpler statements of uninterrupted lines of development from the beginning to the present time would, however, have been very valuable. The remaining phases, the morphology, syntax, composition, etymology, sematology, analogy, etc., are all dealt with concisely and suggestively, and quite as extensively as the breadth of the subject would justify us in expecting. The bibliography at the end of the various divisions, if not exhaustive, always indicates the most important works, and that is all the circumstances permit.

The Catalan is treated by the scholar specially identified with that language, A. Morel Fatio, and the Spanish by Gottfried Baist; the latter in singularly curt fashion, in 26 pages, of which 16 are devoted to phonetics and 6 to morphology. It is rather remarkable that, as against the 46 pages devoted to Catalan and Spanish combined, we have no less than 89 devoted to Portuguese alone, of which 73 are occupied exclusively with phonetics. This discrepancy, in spite of the interesting character of the Portuguese phonetic system, is unaccountable. A treatment of the Latin element in Albanian by Gustav Meyer, of broad philological value, follows. A very complete index with a series of colored language and dialect maps close the volume. The remaining three *Lieferungen* which will form the second volume will deal with Romance metres, style, the various literatures, the histories of the different Romance peoples, as also the history of their culture and art.

Since the conclusion was established that the Albanian language represents a separate and distinct branch of the Indo-European family, the study of Albanian has acquired new interest and importance. That this conclusion, though broached as a theory many years ago, should have been so slow in getting itself generally accepted and incorporated into the textbooks, is doubtless due mainly to the circumstance that Indo-European philologists in general really knew little or nothing about the language in question, and had, short of actual residence in Albania (a thing which is not every man's affair), no satisfactory means of informing themselves with regard to it. There have long been in print, to be sure, Albanian grammars of more or less merit, and scattered information with regard to particular dialects has been obtainable here and there; but there was no scientific account of the language by a thoroughly competent modern philologist, nor was it easy to get hold of texts transcribed and edited according to the best lights of contemporary phonetic science. This lack is now temporarily supplied by the little volume before us, which appears in advance of the more elaborate treatise upon Albanian which the author, Prof. Gustav Meyer of the University of Graz, is preparing for Breitkopf & Härtel's "Library of Indo-Germanic Grammars," the same collection for which he has already written his excellent grammar of the ancient Greek.

The country known since the times of the early Greek emperors as Albania comprises the ancient Epirus and portions of Illyria, Macedonia, and Chaonia. It is nominally a Turkish province, and has a population estimated at 1,200,000. This population has a large admixture of Greeks and of Turks, but the bulk of it consists of the true Albanians, or Arnauts, in whom we must now recognize the descendants of an ancient Indo-European stock that failed to produce any Vedas, Avestas, Iliads, or Eddas, or otherwise to make for itself a memorable place in history. Their language interests us somewhat as that of the Greeks might if all we knew of it were derived from a few living dialects, without a history and without literary records.

Meyer's grammar is the result of investigations conducted on the spot by the author, who has, partly at the instance of the Austrian Government, made several journeys to Albania. He writes the language in an alphabet of forty-five symbols, four of them being diagraphs, which he has devised by taking ordinary italic letters as a basis, and supplementing these with a few Greek characters and numerous diacritical marks. The chapter of phonology is very brief, the fuller treatment of that subject being expressly reserved for the forthcoming larger work. Taking the nearest practicable substitute for Meyer's alphabet, we note a few points of interest in Albanian grammar. In the Albanian noun, the old Indo-European stock of eight or more case-endings appears reduced to two, of which one gives a nominative, vocative, accusative, and locative, the other a genitive, dative, and ablative. We find here the postpositive article which constitutes so notable a feature of the Scandinavian languages, and also a few cases of Germanic umlauted plurals, *e. g.*, *plak*, 'old man,' *plech*, 'old men'; *ka*, 'ox,' *ke*, 'oxen'; *nate*, 'night,' *nete*, 'nights'; *gur*, 'stone,' *gur-i*, 'the stone'; *korp*, 'raven,' *korb-i*, 'the raven.' An adjective is always preceded by the article, and this article also serves as a connecting link between a substantive and a following limiting genitive, *e. g.*, *gur-i i malit*, literally, 'stone-the the of the mountain.' Comparison of the adjective is effected by means of the word *me* (derived from, or cognate to, the Latin *magis*), *e. g.*, *Gergi este me i-bukure se Pietri*, literally, 'George is more the-handsome, then Peter.' The first five numerals run *ne*, *dü*, *tre*, *katre*, *pese*. Noteworthy is the fact that the first person singular, present, of the verb 'be' is *jam*, a form which shows a closer parallelism to our English 'am' than any other modern derivative of the ancient proethnic *asmi-esmi*. Still more noteworthy is the fact that this *jam*, in more or less abbreviated form, is used as a suffix to form the passive voice; *e. g.*, *lith*, 'I bind,' *lithem*, 'I am bound (bound-am).'

The texts given by Meyer have, for the most part, never been printed before. They illustrate all the more important dialects of the language, namely, that of the metropolis, Scutari, that of southern Albania (Corytsa and Corfu), and those of the Albanian communities living in Greece, in Sicily, and in Calabria. We find, first, three popular tales in the dialect of Corytsa; secondly, three different versions of the story of the prodigal son, two of them orthographically adapted from translations made some years ago under the auspices of the English Bible Society, the other from a translation made at the instance of Prince Bonaparte; thirdly, six different versions of Matthew (viii, 5-13) obtained from various sources, and finally, about a score of wedding songs. At the end of the book is a well-made glossary to the texts. This glossary does not pretend to go deeply into matters of historical etymology; it contains, however, occasional brief comparisons which serve to light the way in an interesting manner for the philologist. A survey of the glossary shows, as one might expect, a great many Albanian words that are borrowed from the modern Greek. Somewhat less in accordance with one's natural expectations is the fact that we find an equally great, or perhaps even greater, contingent of words that, in Meyer's opinion at least, are borrowed from the Latin.

Dr. von Below's book forms the continuation of two papers which appeared in vols. 58 and 59 of Sybel's *Historische Zeitschrift*. The first of them aims to show that the citizens of German mediæval municipalities were from the outset preëminently freemen, and not villeins. The second paper lays down the proposition that the separate, independent judiciary of the cities was not derived from that of manors, but was originally a part of the public or national judicature. The volume before us treats of the origin of the municipal community, especially its government. According to Dr. von Below, the administrative machinery of the cities—apart from the judiciary—was derived from the ancient rural community (*Landgemeinde*). He rejects the prevailing views of Nitzsch, Arnold, and Heusler regarding the origin of the civic government (the *Stadt-Rath*, etc.) from manorial jurisdictions, gilds, *scabini*, etc.; and contends that the civic polity was evolved from the mere village by a simple process of growth. The author points out that, while this view has already been advanced by Hegel, Von Maurer, and Planck, it has never been adequately emphasized.

Roughly speaking, Dr. von Below's conclusions will, we believe, apply to the development of English mediæval boroughs. Their municipal constitution is not to be ascribed to survivals of Roman domination, or to gilds, or to any other single influence, but was simply an expansion of the old Teutonic township. This is too prosaic and simple a view of municipal growth to satisfy most of the brilliant investigators of to-day. There is a strong tendency among historians, especially in Germany, to seek the germ of an institution in some distant age, in some distant country, or in some single extraneous influence; they do not make sufficient allowance for spontaneous, indigenous growth due to a mass of influences or to general environment. When one finds that, after all, the critical acumen of Nitzsch, Heusler, and Arnold has been productive mainly of error, that they soared to the skies for what lay within easy grasp on the earth, one has less faith in our much-vaunted canons of historical criticism.

Our English. By Adams Sherman Hill. Harper & Bros. 1889.

THE five papers which make up Mr. Hill's entertaining and instructive volume have already been published in magazines, substantially in their present form. They deal with English in Schools, English in Colleges, English in Newspapers and Novels, English in the Pulpit, and Colloquial English. They make up a book for teachers and parents, and one which they can hardly read without profit. Mr. Hill's practical recommendations seem to be generally good. They are conservative and at the same time they are enlightened. For instance, he is fully alive to the objections to the study of formal grammar, and even goes so far as to say that "several hours judiciously used should suffice to teach an intelligent boy the few points of grammar which it is most necessary to know." At the same time he strongly insists on the necessity of correctness and the complete eradication of vulgar errors at a very early stage. He is no advocate of slovenly teaching, and points out that there is great danger that petty errors, unless corrected at the beginning, never will be. Grammatical accuracy should, he thinks, be taught by example rather than by precept—that is, the teacher should be constantly on the watch for errors as for weeds in a garden. He urges that classical schools should make translation a study in good English, and it is gratifying to learn that in certain quarters the old word-for-word translation of Latin (he gives two delightful examples—"Tarquin having been expelled, two consuls began to be created instead of one king," and "No one will be about to be a thief, we being the aid") is rapidly becoming a thing of the past.

On the whole, Mr. Hill would have good English treated from the very beginning of school life, "not as a thing by itself, but as part and parcel of every study in which the mother tongue is used, whether orally or in writing."

"This," he continues, "which may be called the indirect method of teaching the rudiments of English, has one decided advantage over the direct method, in addition to those already mentioned. The English of an examination-book or of a translation appears to the pupil to be, as it really is, a means to an end, like the English he talks on the playground or at an evening party. The English of a boy's formal essay, on the contrary, may be and often is merely words that serve no purpose, and seem to him to serve none, except that of filling the prescribed number of pages."

Of course, we come sooner or later to compositions; but the point to be borne in mind is, that when this stage is reached, the pupil should have already acquired the art of *writing English*. One other point here we must not overlook, and that is the practice of abstract or *précis* writing. Mr. Hill thinks it (as it indeed is) an excellent exercise for a boy to reproduce an abstract of something that he has already written himself. But why not also abstracts of things written by other people? There is no better help to thought and expression, and, we may add as the result of much bitter experience, no rarer accomplishment than the art of abstracting correctly and tersely.

As to composition writing, Mr. Hill gives much sound advice, for which we have no space here, but the gist of which is the principle that the subject should be some concrete one, with definite lines marked out, which compel thought on the writer's part. The chief difficulty with most school compositions is that the subjects selected are stale and too vague. The Mariner's Compass, Old Age, Friendship—the materials for essays on subjects such as these do not exist in the minds of the young, and hence must be got out of books—exactly what we do not want. Let the pupil be made to write about something which interests him—it may be a description of something he has seen, it may be a discussion of some topic which is drawn from his own daily life.

But we must not expect too much from school teaching of English. Otherwise, the facts which confront us would be too hopelessly depressing.

"Between 1873," Mr. Hill says, "when Harvard College for the first time held an examination in English, and 1884, I read several thousand compositions written in the examination room upon subjects drawn from books which the candidates were required to read before presenting themselves. Of these a hundred perhaps—to make a generous estimate—were creditable to writer or teacher or both. In 1884 Mr. (now Prof.) Briggs, who then took charge of the examination, wrote me as follows: 'Few [of the books] were remarkably good, and few extraordinarily bad; a tedious mediocrity was everywhere.'

"If the dreary compositions written by the great majority of candidates for admission to college were correct in spelling, intelligent in punctuation, and unexceptionable in grammar, there would be some compensation; but this is so far from being the case that the instructors of English in American colleges have to spend much of their time and strength in teaching the A B C of their mother-tongue to young men of twenty—work disagreeable in itself and often barren of result. Every year Harvard sends out men—some of them high scholars—whose manuscripts would disgrace a boy of twelve; and yet the college can hardly be blamed, for she cannot be expected to conduct an infant school for adults."

Much if not most of this rawness in the use of English must come, not merely from defective training in schools, but from defective training at home. When we reflect that at least three-quarters of our time in early childhood is spent at home, with nurses and parents and other children, it seems inevitable that our *habits* of using English should be mainly formed at home. And so they are. Every healthy, natural child picks up the language of those it is most with, and in the last analysis we think it will be found that the slovenly English which is so striking a phenomenon of boys' efforts, is the result of slovenly training, or no training, at home. In other words, the correct use of English is more largely a question of breeding than it is of school teaching. All this does not contravene what Mr. Hill says. It goes to show that, in this case as in so many others, while the teacher may stand *in loco parentis*, he cannot actually be father and mother to the child. In fact, he probably has, without knowing it, to contend in a majority of instances against the influences of the child's home—a losing fight at best. Teach a child the mysteries of *shall* and *will* as much as you please, how can you create a *habit* of correct discrimination between them if his father and mother think one as good as the other, or do not care to take the trouble (probably the latter case is as common as the former) to correct such faults?

History of the Mongols from the 9th to the 19th Century. Part III. The Mongols of Persia. By Henry H. Howorth, M. P. Longmans, Green & Co.

IN a preface to this, the fourth and largest volume of a voluminous work, the author speaks rather sadly of the lapse of five years since the last issue, and of the failing health which has interfered with his labors. We should say that this instalment of nearly 800 pages of fine print would do no discredit to robust health, and, as it comes down not quite to the year 1400, Mr. Howorth will need long life and full powers to leave the world a complete record of his chosen people to the present time.

In one sense the present volume is less interesting than the earlier ones. There was a dramatic interest in the rise of an obscure tribe in the north of Asia, under a barbarian of genius, to the rule of almost the entire continent, which is materially diminished when the subject is a series of internecine struggles for supremacy over a limited area. Khulagu Khan and Ghazan Khan were no doubt men of great ability, and there is a certain attraction in following the phases of Eastern despotism; but it is of a different kind. Contact with the Crusaders and the Sultans of Egypt, with their Mamelukes, and the recurrence of familiar names in Syria and Asia Minor, give a sense of reality to the narrative, and there are touches which vividly recall the 'Arabian Nights.' It is related of Khulagu that some people went one day to ask justice against a manufacturer of files who had killed one of their relatives, and who they demanded should be given up to them for punishment. Having inquired if there were many manufacturers of files in the country, and finding there were only a few, he ordered the aggrieved to avenge their relative's blood upon a manufacturer of pack-saddles, for they were numerous. As they insisted this would not do, he made over a cow to them in satisfaction. Under his successor, Abaka, the officials, who had before oppressed the people, were so carefully checked that the market-folk used at night to leave the booths strewn with goods and food, and no one took the smallest thing. As a proof of this it is said that on one occasion, as the watchmen were going their rounds, one of them entered the booth of a sugar-baker or confectioner, took a sweet cake, and left two dirhems (which was double the price) in the corner of the booth. On the following morning, when the owner of the booth found a dirhem more than his due, he dared not conceal it, could not rest, showed the silver piece to the treasurer, and gave information of what had happened. It was immediately ordered that the watchman who had transgressed the rigid law should be hung to a hook like meat at the butcher's.

It is difficult to believe that so desolate a country as western Asia could once have been rich, populous, and flourishing; but the change is explained by some generations of warfare like that between the Ilkhans of Persia and the Egyptian Sultan. Thus, one of the latter,

Bibars, dreading a fresh invasion, caused all the women and children to be removed from Northern Syria, while the country was laid waste from Aleppo as far as Mesopotamia and Asia Minor, and the bushes and trees were burned so that the Mongols should find no food for themselves or shelter for their cattle. Famine was the not unnatural result.

On page 290 is a curious specimen of official correspondence between the two potentates. Like other times and countries, Persia under the Mongols had its experience of paper money. Only, instead of making it a legal tender, as with us, or ordering, as in Great Britain, that whoever declined paper money could not recover anything else, a more drastic method was adopted under Gaikhatu Khan, in 1294, by prohibiting the use of metal currency throughout the kingdom, and an edict that whoever bought and sold for other money than "chao," and whoever did not take his coin to the mint to be exchanged for paper money, was to be punished with death. This did not, however, prevent prices in paper from rising to 100 for one. Ghazan Khan, whom Mr. Howorth thinks the greatest of the Ilkhans, seems to have been inclined to gloomy views. One day after the death of his wife, he asked his amirs what was the most grievous thing in life. It might be supposed that the tact of an Eastern courtier would have suggested the particular bereavement from which the monarch was suffering. Perhaps they thought that that might have excited a suspicion of sincerity. At any rate some said a defeat, others imprisonment, others poverty, sickness, or death. Ghazan replied: "The most grievous is to be born at all, for life is but a string of misfortunes, closed by death."

We have selected these items as showing that the charm of the present volume, at least for the general reader, consists mainly in picturesqueness of detail.

L'Irlande et l'Angleterre depuis l'acte d'union jusqu'à nos jours. 1800-1888. Par Francis de Pressensé. Paris: E. Plon.

"IRELAND, though a little country, is one in which the greatest problems of politics, morals, and humanity exist. Human problems can be best studied among the unhappy, and moral problems among those whose misfortunes arise from injustice. Where will you find a country more unfortunate than Ireland, or a nation whose misery is less deserved?" This was Gustave de Beaumont's explanation, fifty years ago, of the interest Ireland had for political philosophers. Community of religion, supposed identity of race, sympathy with a weak country oppressed by a rival, for a Catholic country under Protestant supremacy, have all combined to make Ireland a special subject of observation and interest to Frenchmen, with the result that a large number of French books on Ireland have been and continue to be published. Pressensé's work will rank with that of Beaumont among the serious and valuable contributions to Irish history.

The author is foreign editor of the *Temps*, and son of a well-known Protestant clergyman who, as a member of the Senate, has played an important part in French politics during the last ten years. The parentage and associations of F. de Pressensé give interest and lend weight to the conclusions he has arrived at after a very laborious and careful study of a vast amount of material: the mere enumeration of the works consulted and read—comprising Hansard's Debates, histories, biographies, pamphlets, and reviews written both by friends and foes of the Nationalists—covers five pages. The result is an eminently readable book, which, though it tells a story well known to readers of Irish history, tells it well. Many otherwise well-informed Irishmen have not read the history of their country, and for them Pressensé's work is as good a book to study as any other treating of this period. He has not only summarized the information contained in the most recent works published, analyzing and discussing the opinions of their authors, but he has verified their statements by consulting the original publications on which they were founded, as well as numbers of books and pamphlets which are entirely out of the ordinary reader's reach. The book is not a mere sketch, but is a serious and labored study of permanent value. "I began," says Pressensé, "with a prejudice in favor of English supremacy and against Irish autonomy; I finish my work completely converted to Home Rule as defined by Gladstone and accepted by Parnell."

The book is divided into five parts, each of which forms an essay, which might be separately read, devoted to a distinct period. The first treats of the passage of the Union; the second of Catholic Emancipation; the third of the Repeal Agitation under O'Connell; the fourth of the famine and the period succeeding it, when Ireland lay "like a corpse on the dissecting table"; the fifth commences with the formation of the Home Rule League under Butt, follows the career of Parnell, and ends with the present régime of coercion pure and simple under Balfour. The cause is won, says the author, at the tribunal of history, and is about to be won at the tribunal of British democracy.

The relations between Ireland and England at the end of the last century were eminently unsatisfactory. Ireland, while subject to the Crown of England, claimed and had technically the right to refuse supplies, to declare war, to make treaties, to regulate her own customs tariff, and even to appoint a regent. It was absolutely necessary to readjust these relations. Pressensé rejects with merited sarcasm the paradoxical theory of Ingram that the Union of 1800 was not effected by bribery. The means were not only bribery, but terrorism and force. The actual outlay amounted to several millions sterling, which were afterwards charged to the Irish Exchequer. It is hardly possible to realize the intimidation and violence employed, whether designedly provoked or not. The outbreak of 1798 was repressed with ferocious cruelty, and accompanied by almost unparalleled atrocities committed by the regular troops, the Yeomanry, and the Orangemen. The ultimate causes of the insurrection, said Emmet to Lord Clare, were the free quarters, burnings, tortures, and military executions in Kildare, Carlow, and Wicklow. Pressensé quotes in this connection Froude's statement that, though the victims of the Jacobins in France were perhaps more numerous, and though from their rank their fate excited more pity and indignation, yet the Orangemen in Ireland completely surpassed the Jacobins in cruelty. Viceroy Cornwallis wrote to Pitt that "the terror was so great that the chief people in Ireland would readily consent to the Union as a means of escape." When reproached by the Unionist party for his lenity, he replied that he had only attempted to stop the burnings, murders, tortures, universal violence, and brigandage of the troops, whose number amounted at this time to 179,000 men, and who were a terror to every one but their enemies.

The only section of unterrified or uncorrupted public opinion that was genuinely in favor of the Union was a portion of the Catholic hierarchy, who had been led to think the Union would be accompanied by a complete measure of Catholic emancipation. But the history of post-Union legislation demonstrated the radical incapacity of the English Government to keep their most solemn promises, or to fulfil the most elementary duties of a civilized State towards Ireland. The Irish legislature was drowned in the English, while the Irish executive remained separate and the creature of the English executive. The first measures of the United Parliament were coercion acts, accompanied by indemnities granted to those who had committed illegal atrocities in suppressing the rebellion. The granting of Catholic emancipation (which should have accompanied the Union) after a delay of twenty-nine years, during which the bitterest religious animosities were aroused, was, Pressensé points out, bereft of all grace; it was not a concession to reason, nor given as a measure of justice, but because it could no longer be withheld. The restriction of the franchise, and the maintenance of the old administrative régime, practically reëstablished and confirmed landlord and Protestant supremacy. As a healing measure, emancipation was useless. The policy of caresses and kicks continued, while no single grievance complained of was ever thoroughly redressed.

Pressensé's style is lively; he sustains the reader's interest by the introduction of dramatic incidents in detail, and quotations from speeches of both parties, without overloading his book or interfering with the thread of his story. The last part of his interesting book contains such graphic descriptions that one cannot but think the author must have been an eyewitness of the scenes and personally acquainted with many of the actors. The accusations against Parnell and his comrades of connivance with or secret approval of the Phœnix Park murders and other crimes are dismissed with contempt, as unjustified by facts and inconsistent with the openly declared policy and consistent action of the present National party. As in the case of O'Connell's agitation, what aroused the alarm and fed the fury of the anti-Irish faction was the very openness of the National movement. Secret conspiracies contained within themselves the seed of failure; but open and constitutional agitation made progress, influenced public opinion, slowly, indeed, but effectually. Parnell's policy killed, or at any rate paralyzed, Fenianism; revolutionary methods are for the present in abeyance. After reviewing Balfour's policy, Pressensé holds that it is a failure; the hostile spirit continues in full vigor, and it is demonstrated that to maintain the semblance of union by force it is necessary to withhold not only the greater political and constitutional reforms which Ireland demands, but also those minor reforms passed, or about to be passed, for England and Scotland.

Although the book was written before the collapse of the *Times* before the Special Commission, Pressensé expresses the fullest confidence in Parnell's statements, and approbation of his prudence in not accepting the challenges of Balfour and Lord Hartington to forthwith stake his chance on the verdict of a jury. "Every one knows," he says, "that while Parnell's great work has been the conversion of a revolutionary policy into parliamentary and constitutional agitation, he has necessarily come into contact with the débris of Fenianism." The thorough acquaintance Pressensé shows with English parliamentary, administrative, and constitutional details, as well as with the intricacies of party relations and tactics, is very remarkable. Chief Secretary Balfour referred to this book in his speech at a recent banquet in Dublin, saying that five minutes' inspection of it at a bookstall con-

vinced him of its untrustworthiness. No careful and candid reader could come to this conclusion. The book is characterized by the calm impartiality with which the story is told. It is evidently the result of prolonged and conscientious study, as well as of careful observation. These have led the author to a different conclusion from Mr. Balfour. Such a work is most instructive to those who are closely engaged in the heat and turmoil of the political struggle which it criticises. It enables them to see themselves as others see them. Those most assured of the justice of their cause may receive with gratitude the approval of one who is in a position to take a calmer view of the perturbing events in which they are actors. This book cannot fail to strengthen and gather from a larger area that moral support which is all, or nearly all, that foreign nations can give to Ireland in her persistent struggle not only against unjust and unequal laws, but against misrepresentation and calumny. We commend it most warmly to those who wish to study the history of Ireland since the Union, and to understand the connection between the earlier agitations for reform and repeal and the present Nationalist movement.

Francis Bacon: His Life and Philosophy. By John Nichol, LL.D. Edinburgh: William Blackwood & Sons; Philadelphia: J. B. Lippincott Co. Part I., 1888. Part II., 1889.

THE first of these two volumes in the series of "Philosophic Classics for English Readers" is almost exclusively occupied with Bacon's political career, scarcely any attention being given to his private life, in which much of his philosophy was formed. It is the psychological history, as it were, in which the student of philosophy is chiefly interested; and while it would be impossible to ignore the great chancellor's public career in a complete estimation of his work as a philosopher, it is a misfortune that attention must so often be diverted from his intellectual history by apologies for his political obliquities. But this is what we always find.

Bacon's mental constitution made him at heart an independent in politics, and he thought to solve the political problems of his time by an application of his family motto, *Mediocria firma.* Had his will been as strong as his judgment, he might have saved his integrity; but he did not see that he could rise without crawling, or that he could attain his ends without financial extravagance. He courted the favor of his king, and coveted the manners and means of an aristocratic life: the one led him into flattery for the sake of promotion, the other into the acceptance of bribes, and both to his fall and ruin—a singular fate for a philosopher. The only apology of any force at all is, that he was not worse than his contemporaries; nevertheless, he appears worse because of his achievements in philosophy. The author well describes the condition of the age in these words:

"Never had men of letters a higher standard of style, men of action broader aims; never were either more emulously keen in the pursuit and discovery of truth; but of telling the plain truth to each other they took little thought, of telling it to their sovereign none at all. Despising the opinions of the many, they became slaves to the caprice of one. The *ipsa veritas* of nature was the goddess of philosophers, but the *veracitas* of civil business was unknown to the 'politicks' who 'would circumvent the gods,' whose models were not Pericles, nor Regulus, nor Hamlet, but Alcibiades, the Medici, and Iachimo."

Bacon was both the product and the victim of this environment, so that he divides his faults and weaknesses with others. One merit he had: he did not defend his shortcomings. Dr. Nichol dispenses apology and criticism in very just measures. He occupies middle ground between the extremes of advocates and opponents. With taste, learning, and literary power he summarizes in the first chapter the intellectual, social, and moral forces at work in the age of Queen Elizabeth, and in subsequent chapters analyzes in an impartial manner the character of Bacon. The chief fault in this part of the work is its suitability only for those who are familiar with the history of that time. To any one else it must appear a little fragmentary. In other respects it is worthy of British scholarship.

The second volume displays less of interest for the general reader, because its character as an outline of Bacon's philosophy makes fewer calls upon the author's knowledge of the age. It is evident that his tastes are literary and historical, and, were the work designed for advanced philosophic scholars, it would have to be regarded as failing of its purpose. But it is a summary in a lighter vein for readers who have no time for profundities. Bacon somewhere denounces epitomes, and the reader who would like to see Dr. Nichol's powers better employed than in cataloguing the topics of a great man's writings, would be tempted to use Bacon's judgment against the author. We can praise, however, the extent to which this part of the work shows the unconscious growth of the experimental method before Bacon, in the person of men like Roger Bacon, Leonardo da Vinci, Copernicus, Pomponazzi, Paracelsus, Tycho Brahe, Kepler, Galileo, and a host of minor lights, whose practice and principles Bacon systematized and reduced to the dignity of a method. This occupies a little more than one-third of the volume, and it is very valuable as proving that in philosophy as in nature progress is not made by leaps and bounds, and diminishes the philosopher's honors by justifying the dictum of Macaulay that Bacon, directed by the hints of his predecessors, had merely seen the sunrise from the mountain-top a little sooner than those who were lower down in the valleys. The analysis of the 'Novum Organum' is too brief to admit of the exposition and criticism it deserves. Bacon's relation to Aristotle needs other than a literary hand to present it, and so the 'New' and the 'Old Organon' are seen only on the surface. The last chapter, on Bacon's influence and his relation to religion, is the most interesting, perhaps because the author is himself again in a field where general philosophic views can have full play.

BOOKS OF THE WEEK.

Appletons' Dictionary of New York and its Vicinity. With maps and illustrations. 1889. D. Appleton & Co. 30 cents.
Atwood, Rev. I. M. Revelation. Boston: Universalist Publishing House. 25 cents.
Banks, A. B. Albany Bi-Centennial. Historical Memoirs. Albany: Banks & Brothers.
Bert, P. Primer of Scientific Knowledge. Philadelphia: J. B. Lippincott Co. 36 cents.
Burns, C. E. Disillusions of an Oculist. Willard Fracker & Co. 50 cents.
Clendenin, F. M. Idols by the Sea, and Other Sermons. James Pott & Co.
Cooke, Frances E. The Story of Theodore Parker. New ed. Boston: Cupples & Hurd. $1.
Crozier, J. B. Civilization and Progress. New ed. Longmans, Green & Co. $2.
Digby: Chess Professor. Willard Fracker & Co. 50 cents.
Ebers, G. Margery (Gred): A Tale of Old Nuremberg. 2 vols. W. S. Gottsberger & Co.
Emerson, E. W. Emerson in Concord. Boston: Houghton, Mifflin & Co. $1.75.
Grey, M. The Reproach of Annesley. D. Appleton & Co. 75 cents.
Horace: The Odes, Epodes, Satires, and Epistles. Translated by the most eminent English Scholars and Poets. Frederick Warne & Co. 75 cents.
James, H. A London Life; The Patagonia; The Liar; Mrs. Temperly. Macmillan & Co. $1.50.
"Jerry," and Other Stories. Philadelphia: J. B. Lippincott Co. 25 cents.
Julliot, F. de. Mademoiselle Solange. Chicago: Rand, McNally & Co.
Klein, E. The Bacteria in Asiatic Cholera. Macmillan & Co. $1.25.
Leidy, Prof. J. An Elementary Treatise on Human Anatomy. 2d ed., rewritten. Philadelphia: J. B. Lippincott Co. $6.
Logan, Celia. Her Strange Fate. Belford, Clarke & Co.
Lubbock, Sir J. The Pleasures of Life. Part II. Macmillan & Co. 60 cents.
Merriam, G. S. The Story of William and Lucy Smith. Boston: Houghton, Mifflin & Co. $2.
Merriman, H. S. The Phantom Future: A Novel. Harper & Bros.
Montgomery, D. H. The Leading Facts of French History. Boston: Ginn & Co. $1.25.
Murray, W. H. H. Deacons. Boston: Cupples & Hurd. 75 cents.
Murray, W. H. H. The Story that the Key Told Me, and the Story of the Man who Didn't Know Much. Boston: Cupples & Hurd. $1.50.
O'Connor, T. P. The Parnell Movement. London: T. Fisher Unwin. 25 cents.
Oliver, Dr. N. T. Aimeda: A Tale of the Buellos Madros. Chicago: Rand, McNally & Co.
Seawell, M. E. The Berkeleys and their Neighbors. American News Co. 25 cents.
Seymour, Prof. T. D. A Concise Vocabulary to the First Six Books of Homer's Iliad. Boston: Ginn & Co. 80 cents.
Shapley, R. E. Solid for Mulhooly: A Political Satire. New edition, with illustrations by Nast. Philadelphia: Gebbie & Co. 75 cents.
Stevens, Mai. Bessie's Promise. James Pott & Co.

HENRY HOLT & CO.

HAVE READY:

NEW MATERIALS FOR THE

History of the American Revolution.

Translated from the French Archives. By John Durand. 12mo, $1.75.

Smith's Synonyms Discriminated.

A Dictionary of Synonymous Words in the English Language, showing the accurate signification of Words of Similar Meaning. *Illustrated with Quotations from Standard Writers.* By the late Ven. C. J. Smith, M.A. *Revised edition.* 12mo, $2.25.

AN ATTEMPT TOWARDS

An International Language.

By Dr. Esperanto (Warsaw, Russia). Translated by Harry Phillips. Paper, 25 cents.

BANGS & CO.,

739 and 741 BROADWAY,

Beg to announce the sale of the extensive and valuable library of

PROF. CHAS. E. WEST, M.D., LL.D.,

of Brooklyn, N. Y., to take place Monday, May 20, and following days. The Library, which embraces about 3,200 lots, is the result of fifty years' careful and intelligent book collecting, in which Prof. West spared neither pains nor expense to render the collection as complete as possible in the several branches of literature and science in which he was especially interested.

Catalogues mailed upon application to the Auctioneers.

HAVE YOU READ THE THRILLING NARRATIVE JUST PUBLISHED?

"A WOMAN OF SOREK,"

By ANTHONY GOULD.

For sale by all the principal newsdealers, or forwarded upon receipt of the price, Fifty Cents, by the

AMERICAN NEWS COMPANY, NEW YORK CITY.

A German "WEBSTER."

Fifty years ago the Brothers Grimm commenced their monumental word-book of the German Language. The zeal of learned disciples has since their death continued the labor, and at no distant day its completion may now be looked for. Its size and plan, however, will prevent it from being what its projectors so dearly wished to make it, a book for every German household "to study, to hallow, and to cling to your language; your power and life as a people depend on it."

MORIZ HEYNE, one of the collaborators of the Grimm Lexicon—the letters H, I, J, L, M, R are due to him—has for ten years been engaged in preparing a new

DEUTSCHES WÖRTERBUCH of the scope and size of *Webster's Dictionary*, which will meet a truly long-felt want at last. It will appear in 3 quarto volumes, and be issued in 6 divisions, at $1.85 each, and completed within 2 or 3 years.

Special terms to public and college libraries.

The first division will be sent for inspection on receipt of price, which will be refunded, less 5 cents for postage, if the book is returned.

The Nation.

NEW YORK, THURSDAY, MAY 16, 1889.

The Week.

ONE of the most encouraging signs of the times is the remarkable and continuing interest in Bishop Potter's sermon. Not only is it condemned by the people from whom one would naturally expect condemnation, and whose condemnation is desirable as a sign of the efficacy of the medicine, but it alone of the literary performances of the centennial is being eagerly bought for perusal and preservation. The demand for the edition printed by the *Evening Post* has been extraordinary, both from individual purchasers and from the trade. Every other utterance of the celebration is fast passing from men's recollection. That the enduring word of the day should be not a tale of material growth, or of increasing power by land or sea, but a solemn reminder of the length to which the Government has strayed away from noble standards and high ideals, is surely a hopeful indication. Bishop Potter's "bugle call" is a very different one from that which President Harrison recommended to his office-seekers two months ago. Their echoes

> "——die in yon rich sky,
> They faint on hill, or field, or river;
> Our echoes roll from soul to soul,
> And grow for ever and for ever."

The movement for the erection of a monument to the late Henry G. Pearson has resulted in the appointment of a committee, of which Mr. George William Curtis is chairman. Subscriptions may be sent to Mr. William Potts, at the office of the Civil-Service Reform Association, 35 Liberty Street, or to any member of the Committee. The monument is intended to do honor not simply to the memory of a brave man, but to the good cause of honest public service in which he died. His papers are now in the hands of his most intimate friend, who, we are glad to hear, will shortly give to the world some account of the difficulties with which he had to contend and of the manner in which he met them, in trying to make a great public office a school of integrity and efficiency.

One of the most striking illustrations of President Harrison's devotion to civil-service reform, and his adherence to the principle expressed in his letter of acceptance, of making "fidelity and efficiency the only sure tenure of office," is to be found in the recent experience of the Norwich (Conn.) Post-office. Under recent Republican administrations this office was the centre for all local partisan work and caucus deliberation. The Postmaster, as the proprietor and active manager of a large and fashionable boot-and-shoe store, devoted his time and attention mainly to his private business, and left the office to be administered by the chief clerk, an ex-soldier of fine military record and good executive ability. No Democrat was ever allowed a place as a clerk or letter-carrier in connection with the office. Under President Cleveland's Administration, the boot-and-shoe merchant was allowed to retain his place until the expiration of his commission, and two months additional to round out the fiscal year, or for a total of a year and four months. The Democratic appointee was a representative of the so-called "working classes," who, commencing life in a subordinate capacity on one of the Sound steamers, had elevated and educated himself in a high degree, and in a Republican city had been elected to an honorable place in the municipal government. Under his administration of the Post-office there were no wholesale removals. The ex-soldier chief clerk continued to be chief clerk for nearly three years, or until his election to and acceptance of another and better paying office—that of City Tax Collector. Of the letter-carriers, those on the best routes—including one colored man—were also not displaced.

Hardly, however, had President Harrison and John Wanamaker taken their seats, than the work of office displacement commenced in Connecticut. Within thirty days from the 4th of March most of the postmasters in the little towns of eastern Connecticut were removed, and also the occupants of two Presidential offices, namely, in Bridgeport and Norwich; the latter fourteen months in advance of the expiration of his commission. His successor—the ex-chief clerk—who had been treated with such consideration, signalized his advent to office by notifying, twenty-four hours before his commission entitled him to enter upon administration, every Democratic employee of the office, with a single exception, that his services would be no longer needed. We think the political records of the country might be searched in vain to find a worse exhibition of indecent partisanship. Its meaning simply is that the spoils system has been reinstated by the Harrison Administration to the fullest extent, and that, in the opinion of members of the Republican party, no citizen differing from them in respect to political issues and candidates is worthy to hold even the humblest position of trust under a common government.

From Washington we receive a very hopeful view of the work of the reorganized Civil-Service Commission. The personnel of the Commission is excellent, and their intentions are of the best, but they are probably going to have, in spite of the Republican platform, a severe tussle with some of the departments. The Interior, for instance, is by no means disposed to surrender the Census Bureau to the reformers, and will hold on to it all the more eagerly because the Railway Mail Service has been taken away from the spoilsmen. This service was, under the Cleveland Administration, the favorite dumping-ground of Congressmen. They used it precisely as they once did the Bureau of Engraving, as a sort of garret in which all their importunate henchmen could be stored at the public expense. When it was taken away from them, of course the retention of the Railway Mail Service became all the more important, and they did manage to retain it. Now that it has gone, the appearance on the scene of the Census Bureau, with a whole army of officials to be appointed, is, of course, a perfect god-send, and they will cling to it like grim death. For the same reason they will resist with great vigor all attempts to bring the public printing-office under the rules. In fact, it may be taken for granted that the more the area covered by the rules is enlarged, the more tenaciously will Congressmen cling to what is left uncovered. They feel like Indians resisting the encroachments of the white men on the reservations, and watching the gradual disappearance of the buffaloes and other large game.

The ballot-reform movement goes bravely forward. Minnesota is one of the latest recruits, its recently adjourned Legislature having passed a law which is a complete adaptation of the Australian system, and which is applicable to all the cities of the State having a population of 10,000 or more. The list of States with the reform laws now stands eight in number as follows, in the order of enactment: Massachusetts, Indiana, Montana, Rhode Island, Wisconsin, Tennessee, Minnesota, and Missouri. We are not informed as to the actual signing of the laws by the Governors in the last two States, but there is no doubt of their signing.

Gov. Hill has for a second time prevented the enactment of a ballot-reform law for this State. The bill which he vetoed on Monday was substantially the measure which he vetoed a year ago, some modifications and changes having been made in it with a faint hope of overcoming his objections. It was an admirable measure a year ago, and an equally admirable one after its alterations. It was the first elaborate measure drawn in this country as an adaptation of the principles of the Australian system to American election methods, and it has within the past year been made the basis and model for the eight bills which have become laws in as many States. Not one of the objections which Gov. Hill makes with such obvious insincerity and at such wearisome length has been raised anywhere else. We shall not dignify those objections with any serious discussion whatever. The *World*, the leading newspaper of the Governor's own party, says that the Governor "has painfully failed to demonstrate that he is something more than a politician and a party servant." In our view this is not the first time that he has failed in the same way; but if his own party is beginning to find him out, there is hope that we may in time be rid of him. It was just as certain when he was reëlected last fall as it is now that there could be no ballot-reform and no

temperance-reform legislation secured during the three years of his new term; but we were not able to get his Democratic supporters to perceive the fact at that time.

The bill to provide for the better care of the indigent insane in this State has been defeated again in the House, but this time by a narrow majority, while it has passed the Senate. Last year it did not even get out of the Committee to which it had been referred. The friends of the bill have therefore every reason to feel encouraged and to redouble their efforts. All the progress that has been made in bringing this humane measure to the point where it could command forty-five votes in the Assembly has resulted from a persistent dissemination of the facts and the truth among the homes of the people, by which consciences have been stirred and pity has been awakened in the hearts of men and women for a voiceless and most afflicted class. One of the most potent agencies in this work, and one of the most potent appeals ever made in this State or anywhere for the better treatment of the insane, is the report on this subject made by the State Board of Charities to the Legislature last January.

An admirable work, of a more general character, is Mr. W. P. Letchworth's 'The Insane in Foreign Countries,' just published by G. P. Putnam's Sons. If any one wishes to know how slowly the condition of the insane has been improved, how bitter and discouraging at times has been the battle of the few against the many, of humanity against ignorance and superstition, but how complete the victory of humanity has been, these pages, with their ample illustrations, tell. To lose one's mind was, in the olden time, to be "possessed of the devil," but if one had literally been in the devil's possession, he could not have been worse maltreated than the insane were all over the Christian world a century ago. No criminals could be served worse, because nothing can be worse than to be burned alive, as insane persons often were, in order to consume the evil spirit supposed to have found lodgment in the lunatic's person. The contrast between La Salpêtrière in 1792 and Alt-Scherbitz of the present day is as wide as human imagination can conceive. Mr. Letchworth did not apparently have any thought, when making these investigations, of the controversy between State care and county care of the insane, but his work cannot fail to tell strongly in favor of the better system, which must be that which gives the insane the benefit of skilled treatment and all the appliances which science has devised for ministering to the mind diseased.

The description given out of the apparatus to be used in this State under the law requiring executions in future to be by electricity (the first sentence under this law was pronounced on Monday) raises the question whether the makers of that law and the persons who have devised the means for carrying it out are in strict accord. The law was undoubtedly enacted because, with the control now attained over electricity, it was thought that a criminal's death might be brought about instantaneously, and with no possibility of such horrors as come with broken ropes and the other mismanagement so often characteristic of hangings. Every now and then a workman touches a "live" wire, and dies with the touch. It was natural, therefore, to look to electricity as the best means of putting condemned criminals to death. But is it certain that the framers of this law intended that the victim should be seated in a formidable-looking chair, have his feet encased in shoes which contain damp sponges, have another sponge placed on his head, and his head clamped down with metallic bands—all this to be gone through with as the preparation for the death stroke? Was it not believed when the law was passed that the victim would die with the touch of a wire or a knob, and was not the absence of terror-giving paraphernalia and preparation one of the arguments in favor of the new means of death? The first executions in the electric chair will doubtless be very interesting to the scientists who have devised it; but will it not be found that M. de Paris can make better time with his guillotine than these modern electricians with their present system of applying the fluid?

A telegram to the *Times* from North Dakota says that the financiers of that new State intend to adopt some novel features in their Constitution. One of the proposed reforms is to abolish all taxes on cultivated land. Another is to abolish all taxes on personal property. The former is intended as a measure of relief to the farmers, and the latter as a measure of conciliation to the Henry George or single-tax men. If both reforms are adopted, the only taxes will be those on uncultivated land—that is, on property which yields nothing. Regarded as a measure to bring land under some kind of cultivation, we should think that the project might be beneficial, but the amount and kind of cultivation ought to be very carefully prescribed in the Constitution, because the owners of land subject to taxation would be very likely to put in crops of hay or something that would require very little labor, in order to escape taxation. Inasmuch as no land can be taxed until it is surveyed, and as the Government is rather backward in making surveys, it would seem that the new State would run short of funds very soon after the adoption of the new Constitution, if both these reforms should happen to be adopted, unless a third one should be added providing that all public officials should serve without pay. This would have the beneficial effect of reducing the number of office-seekers, and might be worth trying for that reason alone. But we fear that the politicians will not take so large a dose of reform at one sitting.

The *National Economist* is a weekly paper published at Washington city. It calls itself the "official organ of the National Farmer's Alliance and Coöperative Union of America, the National Agricultural Wheel, and the Farmers' and Laborers' Union of America." This is a formidable organship, in name at least, and we have accordingly given close attention to the successive numbers of the *National Economist* in order to learn what its platform might be, but with slight advantage until its last number (May 11) reached us. In this the editor supplies some views of national finance which we judge are to constitute a part, at least, of the policy of the Alliance, the Wheel, and the Union. First, we are to have "expansion" of the circulating medium of the country. Then, in order to prevent corporations, syndicates, combinations, capitalists, and smart people from taking advantage of expansion to swell their own fortunes at the expense of farmers, wheelers, and other innocents, there should be "a regulation in regard to indebtedness, either providing for an increase or diminution of indebtedness to correspond with the value of the circulating medium as regulated by its volume; or, as many now eminent thinkers believe to be the better plan, abolish all laws for the collection of debt." Then, every business that is by its nature a monopoly should be carried on by the Government, and laws should be passed "prohibiting any person or combination of persons from taking advantage of one's hunger, or cold, or sickness to extort money, the same as they now prohibit any person from taking advantage of the physical weakness of another upon the highway at the dagger's point or pistol-mouth to extort money." But this is not all. The laws should recognize no right to "hypothecate lands"—meaning, we suppose, to mortgage them. The "pernicious custom of commerce in real estate" should also be destroyed. With these checks the *National Economist* thinks that "expansion" would be accompanied with beneficial effects that would be permanent and lasting.

Only one thing seems to be lacking in the programme, and that is to get the circulating medium into the right hands when the expansion takes place. Of course the right hands are the Alliance men, the Wheelers, and the Unionists. Congressmen and members of the Legislature and their friends should not have any. Although they have to make the laws by which expansion takes effect, they should be prohibited under the severest penalties from getting any of the new circulating medium. But how is this to be done? We can think of no effectual preventive except public opinion. Public opinion would be so sharpened by a repeal of all laws for the collection of debts, and by putting an end to mortgages and the traffic in real estate, that it might be expected to hold politicians to a severe accountability if any of the new circulating medium should stick to *their* fingers. Before commenting on the underlying principles set out by the *National Economist*, we shall wait to see the details of its plan for bringing about expansion.

The *Tribune* of May 6, in a review of the

industrial situation of the country, made the following statements, which we commend to the thoughtful consideration of all that large class of persons, more especially the operatives and laborers on farms and in foundries, factories, and mines, who were confidently assured that the defeat of tariff reform and the election of Harrison meant increased wages, larger opportunities for labor, more extended markets, and a general era of abounding prosperity. Said the *Tribune:*

"But the industries are not in so promising a condition as might be desired. A better feeling is reported in the iron market, and nevertheless pig-iron has sold at $16.75 for Southern No. 1, and steel rails at less than $27 at mill. It is frivolous to suppose that pig-iron is going at once to be consumed at a rate of 7,800,000 tons yearly *for domestic iron alone*, with more than half the rail-making capacity idle. The glass industry about Pittsburgh is also depressed, and overproduction is reported. The coal companies find their troubles such that they have suppressed the usual statement of stocks on hand. The situation of the copper business has not been improved by a further fall at London, or that of the leather industry by some recent failures. Of the woollen manufacturers, a considerable proportion are and for months have been idle and waiting. The circulation of a paper among flannel manufacturers, agreeing to close their works for some months, is now reported. Large crops are expected, but to all appearance they will mean prices so low that Western farmers and transporters may require microscopes for the division of their gains."

Had Mr. Cleveland been reëlected, and all the above-cited results happened, what an unanswerable demonstration would have been afforded of the folly and wickedness of free trade!

A fortnightly leaflet called the *Silver Dollar* is published at Cleveland, Ohio. Its issue for May 1 contains a letter from one Ivan C. Michaels, exposing a gigantic "smuggling" operation by which silver is introduced into this country from Mexico in large quantities. At El Paso alone, he says, lead ores containing silver have been sent across the border at the rate of 286 tons daily, while other large quantities have been passed over the border at Eagle Pass, Laredo, and Nogales. This has been done, he says, by "a well-organized pool of smelters," who have made not less than $5,000,000 in the past five years. This, Mr. Michaels insists, ought to be stopped. We think ourselves that there is danger lest these smelters should make too much money, and that means ought to be devised to have the smelting done on the other side of the border, so that the Mexicans should have the profit on their own ores to which they are fairly entitled. But, after the smelting is done, the silver would still be admitted free of duty, although the lead would be taxed two cents per pound, or 69 per cent. ad valorem. We have not yet put any duty on the precious metals, but is it not time to do so? Who is to tell whether a piece of ore when it arrives at our custom-house is lead ore or silver ore? If the usual rule is followed of classifying the article according to the component material of chief value, it will in nine cases out of ten be properly classed as silver. Why not "take the bull by the horns" and put a good thumping duty on silver? In that way our miners would be "protected," and perhaps the Mexicans would be compelled to do their own smelting.

We have been wondering at what point in the centennial proceedings litigation would break out, and we must confess some surprise that, with such opportunities for disputes, the resulting crop of law-suits is so small. The only one that seems likely to engage and hold public attention is that of Dr. Edward C. Towne vs. Hon. Chauncey M. Depew for matter not furnished, but ready to be furnished, by the former to the latter for the purposes of a centennial oration. The difficulty in this case is very plain. Mr. Depew took too superficial a view of the oration and Mr. Towne took too ponderous a one. When Mr. Towne received Mr. Depew's request that he should abstract from the Congressional Library or other sources such facts and suggestions as he (Towne) might think useful for the upbuilding of an oration, he went to work as though the twelve labors of Hercules had been imposed upon him. Thirty-two days he toiled, producing matter that he considers would have been worth $1,500 to Mr. Depew if it had been used. Mr. Depew, on the other hand, took a lighter estimate of the occasion, and, by applying three evenings and a part of Sunday to research among books available in New York, produced the oration which we all know about—"a speech for a day, and a fine one," Mr. Towne admits, "but not a speech for fifty years, nor for all time." Mr. Depew refused to pay Mr. Towne's bill for $800 for matter not used, and Mr. Towne now sues for the full value of the facts collected by him, which he estimates at $1,500, although he was willing to let Mr. Depew have it for about half price on account of old friendship. Mr. Depew, not to be outdone in friendship, was willing to pay Mr. Towne $150, although he considers the work done worth only $25. The case presents such difficulties to a court that it will probably be necessary to send it to a referee to be adjusted on the principles of *quantum meruit*. Who would be a better referee in such a case than Col. Elliott F. Shepard? The Colonel has recently had large experience in collecting poems and opinions regarding George Washington. He knows what it costs to collect them, and how much they are worth when collected. He is also a lawyer by profession and the most religious Republican in the United States. A report made by a referee so variously qualified would undoubtedly be accepted by both parties without cavil.

The close of Parnell's cross-examination has apparently taken all interest out of the proceedings for the English public. What Davitt and other witnesses will have to say will probably throw but little light on the matter for the court. They are mostly rather obscure men, whose doings or sayings only affect the home-rule question in a small degree. If Parnell had not committed the astounding and inexplicable blunder of falsely accusing himself of lying to the House of Commons, his cross-examination would have been a complete failure. What effect this incident has had on public opinion in England it is almost impossible to discover, as the newspapers are precluded by custom, if not by the fear of committing contempt of court, from commenting on the evidence during the trial. The only indications of any moment are Parnell's election by a large majority to life membership in the National Liberal Club, and the bestowal on him, by a decided majority, of the freedom of the city of Edinburgh, an honor rarely accorded, and which in this case has been fiercely opposed. As both these things have happened since the escapade in the court-room, it is to be inferred that, for some reason yet to be revealed, no great importance is attached to it by the Liberals. There are only two conjectures about this reason which seem plausible—one that English Liberals are disposed to acquiesce in an Irish view that resistance, on the part of Irish representatives, to a coercion bill abolishing trial by jury, is entitled to the benefit of the various immoralities of actual war in the field, the most cherished of these being the practice of lying to the enemy, in which even pious commanders indulge freely. The other is, that as Parnell is virtually on trial for promoting murder and outrage, the discovery that he was on one or more occasions simply untruthful, is irrelevant and unimportant. But, no matter what can be said for it, the effect on the general public not engaged in active politics is sure to be bad, and to furnish a means of recovery and escape to a great many of his enemies who were stunned by the Pigott explosion.

We have received several letters complaining of Patrick Egan's appointment to the Chilian Mission, on the ground, among several, that he was an accomplice in the Phœnix Park assassinations. We do not believe that this is true. It is true that he fled to this country soon after, while Treasurer of the National League, but, as well as we can remember, it has not been seriously maintained that he had anything to do with the murders, and no proof of it, or suggestion of proof of it, appeared in the evidence on the trial of the murderers. The appointment is, of course, even without this, a wholly unjustifiable one; but Egan ought not to be sent to Chili with more sins on his head than he fairly deserves to bear. For example, we receive this morning a paragraph from *La Union*, the Clerical organ in Valparaiso, which denounces Egan as "one of the probable conspirators" in the murder of Burke and Cavendish, as "a leader of the Invincibles, or rather Fenians," and ascribes his appointment to Mr. Blaine, who, it says, is "the de-facto President of the United States," and "the ruling power in the United States"; and on him it fastens the blame of sending a murderer to represent the United States Government in Chili. It would be well for Mr. Egan or some of his friends to say what the exact facts of this matter are, before he goes to his post.

THE LEGISLATIVE REPORT ON TRUSTS.

THE report of the Committee of the State Senate on Trusts has a twofold aspect. The conclusions reached by the majority are clearly justified. They are not different from those of the minority. Both agree that at present no legislation on the subject is desirable or practicable. Both point to the decision of Judge Barrett in the case of the North River Sugar-Refining Company, now under review in the Court of Appeals, as a proper resting-place for the time being. Both approve of that decision as an interpretation of existing law. But the argument and general tone of the majority report seem to find excuses for the Trusts and to minimize their bad fea tures. Stress is laid, for instance, on the evils of competition, as though it were an evil that goods should be supplied to the community at such low prices that the less capable or the less favorably situated producer should be crushed out. The following paragraph embraces, perhaps, all that can be said on this point by any apologist for Trusts:

"Combination rarely exists except as the result of excessive competition. In the natural condition of affairs the law of supply and demand primarily fixes the reasonable and natural price of every commodity. But, under the stimulus of excessive competition, when each competitor seeks to drive his adversary from the field of trade or transportation, new elements, good and bad, enter the problem, and each rival, not for the public good, but for his own advantage, with rapacious ingenuity lessens the cost to the consumer below the natural and reasonable price; and that he may do this without sacrifice to his capital he increases the product, cheapens the expense of manufacture by cheaper methods and processes, and all with the expectation of ultimately controlling the market and ruining his adversary. But the cheapness of the price is temporary only, for each producer, manufacturer, or common carrier expects, when his competitor is driven off or destroyed, to be able to fix the price, and, for a while at least, to oblige the public to pay a sum in excess of that which, in its normal operations, would be required by the law of supply and demand. Combination to increase the price is often the way of escape sought from this state of affairs. That combination is the natural result of excessive competition there can be no doubt. The history of the Copper Trust or syndicate, the Sugar Trust, the Standard Oil Trust, the American Cotton Oil Trust, the combination of railroads to fix the rates of freight and passenger transportation, all prove beyond question or dispute that combination grows out of and is a natural development of competition, and that in many cases it is the only means left to the competitors to escape absolute ruin."

The fallacy in this argument comes in at the beginning, where it is sought to draw a distinction between the "natural condition of affairs" under the law of supply and demand and what the Committee call "excessive competition." This would lead us to infer that some tribunal or test existed to tell us when competition was natural and when it was excessive. But obviously there is no such test or tribunal. If A is so situated or so unskilful that he cannot compete successfully with B, who shall tell us that B's competition is unnatural? This is a world of competition in both the animal and the vegetable kingdoms, and most of all in the human family. Competition is as fundamental a fact as population or gravitation. It can no more be suppressed than gravitation. It may be retarded and counteracted for a time in particular places and as to particular commodities; but as to all things where the sources of supply are not strictly limited by nature or by statute, it will eventually break down every possible combination. So far we agree with the Committee. So, too, we agree with them that competition is the inciting cause of combination; but here again we must reject the phrase "excessive competition" as misleading, since every competition is excessive which prevents any man from making a living profit.

The fundamental question is whether competition or combination is of an anti-social character, whether the one or the other promotes the *salus populi*, or the greatest good of the greatest number. If there is no standard or authority to draw the line between competition which is excessive and that which is not, then some other test must be looked for. Competition results in cheapness. It has no other end or aim. All its evils, if there be any, take the form of offering more goods for less money, or, since money is a somewhat confusing element, we will say more satisfaction to the buyer for less of his labor. Combination aims to get more and to give less. If it fails of this, in any case, it fails of its object.

Now, which of the two is anti-social in its aims and tendencies? Which confers the greatest good upon the greatest number? It is the common understanding of mankind, and it may easily be put in the form of a demonstration, that competition does this, because the buyers outnumber the producers (that is, the proprietors of production) by millions. It is an artifice much employed in tariff discussion to say that the proprietors furnish employment to labor, and therefore deserve special consideration, but it would not be seriously contended that society should for that reason support works that are badly placed or unskilfully managed. Now, there is no way to tell when works are badly placed or unskilfully managed except by seeing whether they can stand alone. If they have to be braced up by tariff laws or by Trusts, they are a tax upon the community, and therefore anti-social.

The fallacy on which we have commented, crops out again near the conclusion of the report, where the Committee say that while the Trust is full of dangers, "it is not of necessity a monopoly, nor inconsistent with the public advantage within certain reasonable limitations." Reasonable limitations are as little susceptible of determination as excessive competition is. It was not necessary for the Committee to make apologies for the Trusts. They are quite able to take care of themselves. What the public had a right to expect from the Committee, if it had no legislation to recommend (and we agree that none is now necessary), was a plain statement of facts and principles showing where the best interests of society lie. This we are sorry not to find in the report.

POLITICAL GENTLEMEN.

WE are greatly afraid that the performances of Messrs. Robert Ray Hamilton, Hamilton Fish, and Ernest H. Crosby at Albany will end by making the public doubt whether there can be such a thing as "the gentleman in politics." Forty years ago, when corruption and jobbery at Albany began to be very ostentatious, people used to console themselves with the idea that they could cure the trouble by getting "gentlemen" and "scholars" to go into politics, and show the common men the more excellent way. Since then the remedy has been tried more or less, but to say it has not succeeded is to speak mildly. The idea of its proponents was, that although the gentlemen and scholars in a legislature might be a handful, and might be rather artless in practical politics, the effect of their pure example on the hardened offenders around them would be in the highest degree salutary. This result certainly has not been attained at Albany. We have heard of no corruptionist or jobber who has been shamed into virtue, or even external decency, by contemplating the political walk and conversation of Mr. Crosby, or Mr. Hamilton, or Mr. Fish.

Whether an Albany legislator is virtuous or not can only be ascertained by seeing how he behaves about this city. He may be pure and upright about everything else in the State for twenty years, and yet, until he is called on to legislate about New York city, nobody can say with certainty what kind of stuff he is made of. This city furnishes the strong temptation before which even heroic legislators feel their weakness. Even Hamilton Fish, jr., might have passed as a man of adamantine morality, if he had not been called on to provide New York city with a copious supply of water. As soon as he turned his attention to this great problem, there sat Satan waiting for him at all the leading springs in the Croton Valley. His confrères, Ernest Crosby and Ray Hamilton, have now much the same story to tell. Mr. Hamilton was led astray by the practical men some years ago, but repented and has since then, and until very recently, been leading a very respectable life. Mr. Crosby, too, has on the subject of liquor been a very pillar of the church. Satan disguised as a liquor-dealer was never able to make the smallest impression on him, and, indeed, was equally unsuccessful in the character of a corrupter of the suffrage. But no sooner did the Tempter come in the shape of a nice "deal," with something in it for the Republican Boys in the city, than both of these gentlemen surrendered at once, and asked simply to be shown the job they had to do in order to do it. They were evidently in the thick of the whole business, and knew all its ins and outs, and were not in the least nauseated. Mr. Crosby found the Police Justices Bill too much for him; but the only sacrifice he would make was to refrain from voting upon it.

There is an old French proverb, doubtless familiar in the original to our new Minister to France, which says that "a gentleman is always a gentleman, and always shows himself to be such in danger and necessity." Evidently, however, this was founded on a different experience from ours, for our gentlemen in politics are only gentlemen now and

then, and only show themselves to be such when it will not "hurt the party." This is not what their friends calculated on when they rejoiced over the entrance into political life of young men of good education and good social and family traditions. The experience the country has had, in fact, in this matter during the past six or seven years will dispose a greater and greater number to concur with Mr. Moorfield Story of Boston, in the opinion that our "scholars and gentlemen" can do far more for the community as observers and writers and speakers than as office-holders, and that their entrance into the political arena as candidates for place is pretty sure to rob them in the long run of the very things which make them, either in politics or anywhere else, valuable to the community. Nor is this all. As the Roman philosopher has observed: "The worst corruption is the corruption of the good." The worst example is the example of the virtuous man who has lost his virtue, and of the temperance orator who occasionally gets drunk. Consequently the spectacle of a Crosby, or a Fish, or a Hamilton rollicking with the Boys in the middle of a "deal," does infinitely more mischief than the worst excesses of an O'Brien or a Brodsky.

WANTON REMOVALS AND VOTE-BUYING.

THERE is a paragraph in a report of Mr. Depew's recent conversation with the *World* which deserves attention and comment. It is this:

> "This generation has taken care of slavery and eradicated what was the greatest evil of the century, and it has absorbed 14,000,000 of immigrants. That we have received in that enormous population paupers, criminals, lepers, Anarchists, and Communists is true; but the benefits derived in the settlement and development of the country, the building of the public works, the creation of States, the vigor and progress attained by the enormous aggregation of virtue, sobriety, and citizenship that accompanied it, are such that the bad element has been nullified. That we need to legislate to prevent the introduction of mendicants, diseased persons, and paupers goes without saying."

What is true and striking in regard to the whole country is in one sense especially so as applied to the city of New York, and should make foreign critics more tolerant in dealing with defects in our municipal affairs. This city has been, and is, the mixing place of all races and nationalities, of all creeds and systems, religious and political. The overflowing of Europe, Asia, and Africa has come hither and found a home. With the virtue of the Old World has come the vice; with the riches, the poverty. The records of the Department of State clearly disclose that from European States, and notably from Switzerland, have, by governmental effort, been dumped into New York vice, pauperism, idiocy, insanity, and hopeless alcoholism. The sediment, the incurable, of such an immigration tend to remain in great cities.

All of the men over twenty-one years of age become voters in New York as soon as they are Federal citizens and have got a residence, and in many Western States they can vote before they are naturalized. Thousands of naturalization papers, for voting purposes, have been corruptly obtained by purchase before the end of a five years' continuous residence; and even when the residence has been genuine, there has not been that adequate inquiry into the character of the applicant which the naturalization statute requires. Having become a citizen and a resident, every man over twenty-one — practically every one, however dishonest, or vicious, or criminal—can vote, and there is such voting every autumn. No civil-service law or theory prevents the removal each year of members of the New York Assembly and every two years of New York Senators. Mayors and Aldermen come and go with startling rapidity. Even a member of Congress has only two years of life. Voting is a great industry and a *paying* industry. Every recurring autumn finds New York city upset by an election, when vast sums of money change hands.

The theory of these short terms for *elective* offices is, that it is good for the public weal that official power be frequently surrendered to the voters from which it came, in order that they may commend or condemn the conduct of the official. It is under such conditions and out of such materials that the municipal government of New York is made. Has any other great city to deal with similar elements on the basis of such universal suffrage and yearly voting? Defective administering of the details of government is always the price to be paid for representative institutions, universal suffrage, short terms of office, and all the countless blessings of individual, political, civil, and religious liberty. Defective pavements, dirty streets, dilapidated docks, a wretched hackney cab service, and a general absence of the conveniences of daily life at a cheap price to be found in all great European cities, New Yorkers have. It is no doubt very bad and very hard that this city is not free to work out the tremendous problem without the interference and control of the countrymen assembled annually at Albany; but so it is. The buying and selling of votes abound; false counting of ballots flourishes; officials receive "cash down" to shut their eyes to violations of law; pious men furnish the money or inducement to unregenerate officials and to voters to betray the trust they have undertaken—but is that peculiar to New York? Has not the Department of Public Works in London been proved guilty of corrupt practices as bad as anything proved since Tweed's day on our New York Department, even although London does not have to contend with universal suffrage, yearly voting, and an annual upsetting of political affairs? London is, in its municipal affairs, really in the hands of a single race and creed, and that an English race and a Church of England creed, which makes the problem of government so much more simple than in New York. How do Englishmen get on when trying to deal with the government of Irishmen? And yet, what Englishman thinks of or gives due weight to all these things when writing or speaking of the municipal affairs of New York?

Mr. Depew is right: New York has reason for self-congratulation and hope. The protection of life and property in this city during the three days of the recent celebration is a *fact*, whose significance cannot be obscured any more than the incident that so large a part of the rank and file of the policemen who gave that protection were men of Irish descent, and the very same sort of men whom Tory politicians in England say cannot be trusted in Ireland as they are trusted in New York. Thus to do justice to New York is not inconsistent with, or a betrayal of, pressing reforms which Mr. Depew emphasized in these telling words:

> "That we need to improve our civil service, and by it improve our public service, is also unquestionably true. That we need to prevent the corrupt use of money in our elections, is the burning necessity of the time. That we want ballot reform so that the independence of the voter can be beyond reach of interference, is also beyond doubt. That we need high license and a proper regulation of the liquor traffic, every right-minded person admits."

Mr. Depew did not say, but it will be helpful when he does say, and keeps on saying, that the way to stop the indiscriminate and wanton removals from office such as Harrison is now making, and to put an end to the buying of votes and offices which both parties attempted last November, is, for those who really wish to accomplish those great reforms, to cease, as Republicans, insisting that Democrats have been and are solely responsible for the two evils, and for Democrats to stop putting all the blame on Republicans. Never mind now about Jefferson or Jackson or Cleveland, on the one side, or Lincoln or Grant or Harrison, on the other side. One is as much tarred with the dishonor as the other. Both sides have endeavored to beg and expend all the money they could get in the buying of votes. Cleveland turned out officials just as Harrison is turning them out. The thing to be done in the near future is to suppress the twin evils—wanton removals and vote-buying.

CHANGES IN DRINKING-HABITS.

No feature of the centennial celebration attracted more general attention than the small amount of drunkenness in the great crowds. The streets were packed with people all day long, day after day, and yet cases of intoxication were so infrequent that they attracted attention by their very rarity. "It can fairly be said," remarks the *Examiner*, a journal representing the Baptist denomination, "that the city during the three days was remarkably free from drunkenness. The saloons were all open, and it is said that they did a large business. However that may be, the fact is certain that there were very few signs of intoxication. The remark is now made constantly by people who were about the streets for hours on every one of the three days, that they did not see a single person under the influence of liquor. This also is excellent evidence that the people at large are gifted with good sense, and know how to manage themselves even in strange cities and on gala days; and it may even be fairly said to show that they have in this respect made great advances over the people of 100 years ago."

There is no doubt that the *Examiner* is entirely right in the opinion that, in respect of self-control, the American people of 1889 are superior to those of 1789, and that there is consequently less of drunkenness, and of the disorder which springs from drunkenness, on a gala occasion now than in the days of our great-grandfathers. Those were the days when people drank strong liquors, and were expected to get drunk on them, and did not suffer for getting drunk; when ministers and deacons went from the examination of a theological student's orthodoxy, and his consequent fitness to become a pastor, to a dinner where the board was graced with brandy and rum—"good old New England rum"; when the glass of toddy was religiously presented the young pastor at the house of every parishioner on whom he called; when ministers occasionally became intoxicated without incurring dismissal; and when public men of the highest standing might slip under the table at a banquet without forfeiting the confidence of their constituents. In those days tens and hundreds of thousands of people could not have assembled and shown only a rare case of drunkenness.

The change is in part due to the growth of the habit of total abstinence among the people. It no longer provokes criticism, or even causes remark, if a gentleman does not drink wine at a public dinner; society recognizes that it is a personal question, about which others have no right to concern themselves. But this is only a single element in the change, and we doubt if it is the most important. There were plenty of people in the centennial throng who are in the habit of drinking liquor of some kind, and who did drink during the days of the celebration. The point is that they did not get drunk; and the chief reason for this undoubtedly was, that they generally did not drink the more intoxicating kinds of liquor. The introduction of lager beer in the United States has "switched off" a large proportion of drinkers from "hard" liquors to malt. The man who years ago would take two or three glasses of whiskey, and get "fighting drunk" on them, now takes two or three mugs of beer, and does not get drunk at all.

These changes in drinking habits are not confined to the United States. They are hardly less noticeable in Great Britain. In recently presenting the budget to the House of Commons, the Chancellor of the Exchequer called attention to the fact that during the last quarter of a century there has been a great, a material, and a striking fall in the consumption of spirituous liquors, as shown by the receipts from the excise tax. "I have good news again for the friends of the temperance cause," he said, "though it has made and continues to make a gap in the receipts of the Exchequer. This great revenue does not grow in proportion to population. It might be thought, now that we are at a critical moment in the revival of trade, that this would again lead to an increase in the revenue from drink. But it has not done so." He proceeded to show in detail that spirituous drinks have fallen more and more behind for the last dozen years; that a corresponding change has gone on in wines, so that more than half the wine now consumed belongs to the lighter kinds, while formerly the lighter kinds were only one-third of the whole; that since 1876 the total consumption of wine has sunk from 17,000,000 gallons to 13,000,000 gallons, while the total consumption of the lighter kind of wines has risen from 6,000,000 gallons to 8,000,000 gallons; that less wine of all kinds was consumed last year than in the previous year; and that the total drink revenue last year showed a falling off, despite the increase in population, the sole increase being in beer, and that increase only two-thirds of 1 per cent.

Such facts show conclusively that in both Great Britain and the United States the number of people who abstain entirely from the use of liquor is steadily increasing, and that those who use liquor of any sort are more and more inclined to drop rum, whiskey, and brandy for the lighter wines, ale, and beer. That these changes in habit have already gone far enough to produce noticeable effects, is demonstrated by the wonderful sobriety of the recent vast crowds in this city. Public opinion now frowns on drunkenness, and a man suffers serious harm who allows himself to be overcome by liquor. The next step should be the organizing of a public sentiment which will suppress the saloon by making it disreputable for a man to enter such a place. That the next centennial celebration will find the United States a nation of total abstainers, is in the highest degree improbable; but it is not too much to hope that it may find the country, although consuming a large amount of liquor, freed from the demoralizing influences of "stand-up drinking" in rum-shops.

SHALL WE HAVE A CORRECT CENSUS?

THE opinion expressed by us some time since that the appointment of Robert P. Porter to the Superintendency of the Census was in the nature of a public calamity, has since found confirmation in a general concurrence of the most intelligent sentiment of the country, and also in the unconcealed rejoicing on the part of the representatives of the most extreme tariff fanatics. The selection undoubtedly implies just what the country can least afford. That the President of a party whose chief political capital is denunciation of every economic and fiscal principle which England favors, should find no native-born citizen fit to number the American people in their centennial census, take an inventory of their goods and chattels, and collect the evidence for making accurate deductions respecting almost every question pertaining to their social life and condition, and should select for the superintendence of this great task a hap-hazard Englishman, a sort of modern Dugald Dalgetty, ready to fight for any cause that pays, is itself a circumstance that would seem sufficiently potent once more to inspire with life the dry bones of the old Know-Nothing party.

But this is not the worst. For although Mr. Porter has written to the New York *Sun* that "he means to take an absolutely fair and honest census" (and by so doing admits that his appointment invites public distrust), it is by no means certain that he is capable of achieving any such result. There is a deal of truth and common sense in the remark of Emerson, "that the eye sees only what it brings to itself to see." But what will the eyes of the men appointed under the dictation of the American Iron and Steel Association bring to themselves to see on the question of wages, and the influence of taxation for private rather than public purposes? The Chicago *Inter-Ocean* has already definitely indicated the line of vision they are expected to follow by declaring that "now"—that is, under Porter—"the collection and publication of exact data relative to our industries will prove the efficacy of a protective tariff, and finally and for ever damn the Mills Bill."

Again, the Cleveland *Leader* (a high protectionist paper) is delighted with the appointment of Porter, because all citizens are either "protectionists or free-traders," and the President was instructed to appoint a protectionist. It adds that "the free-trade editors see that some of their principal falsehoods are certain to be exposed by an honest census," which is equivalent to an assertion that the census as taken under the supervision of Gen. Walker was not honest, although they never thought so before; and that under Porter we are to have new theories of statistics and new methods, with a view of knocking out the foundation from under the hitherto assumed facts on which the wicked free-traders have based their arguments. Possibly Porter will prove equal to the task of invalidating the commandment which says, "Thou shalt not steal," on the averment of the United States Supreme Court that, "to lay with one hand the power of the government on the property of the citizen, and with the other to bestow it upon favored individuals to aid private enterprises, is no less robbery because it is called taxation." If he can at the same time prove to the workingman that the existing tariff has been enacted mainly for his benefit, his success is assured.

What will the eyes of the census enumerators at the South bring themselves to see, under the inspiration of those Republican leaders who propose to put the next Congressional and Presidential election under the control of the Federal Executive? A reduction of the enumeration of the people of the South, especially of the colored element, to an extent of 10 or 15 per cent., thereby reducing Congressional representation from that portion of the country and helping to perpetuate the political supremacy of the Republican party, would not be a very difficult thing to do, but an exceedingly difficult thing to remedy. The work of the Census Bureau in this respect was brought under suspicion in 1880, and nothing but public confidence in the integrity of Gen. Walker, fortified as it was by a recount in some districts, was effectual to dispel it. That no such confidence will be extended to Mr. Porter he may

feel sure. All the indications are that his appointment was made in conformity with and as an essential part of a scheme to subordinate his great work to political and selfish motives—to help fasten a load of unjust taxation upon the whole people, and possibly defraud a portion of them of their just political privileges. We accordingly heartily join with the Springfield *Republican* in the hope that the Senate, at its next session, will insist on intrusting the management of the census to other and better hands, "and reject Porter's appointment even at the risk of delaying the work of preparation."

A MEDICAL PRACTICE SCHOOL.

BALTIMORE, May 10, 1889.

NOT the least interesting feature in the scheme of university education planned by Johns Hopkins of Baltimore was his provision for a medical school in connection with a general hospital, to be built and organized on the most approved methods known to modern science. The importance to medical education throughout the country of the opening of this hospital—the avant-courrier of a great medical school—may be seen by the following quotations from two recognized medical authorities:

"It is disgraceful, and yet it happens constantly, that men are graduated by prominent medical schools and colleges in this country, without ever having listened to an abnormal heart-beat, seen a case of measles, or assisted at an obstetrical case."

"In the munificence of Mr. Hopkins we have the prophecy and possibility of a reform in medical education which will be general in its character and permanent in its results. Incorporated into the University as an integral part of its system of education, the Faculty of Medicine will be required to subject its students to the same tests as are required in the other departments. . . . There can be no doubt that a school thus organized and conducted would at first repel medical students; . . . it is equally certain that in the near future such a school would be the centre of attraction to the profession in all parts of the country, and would assume a *national* character and importance."

The inception, organization, and christening of such a "national" institution would seem, therefore, events of national interest. That they have been such, the presence at the hospital's formal opening, May 7, of distinguished medical men from all parts of the country testified, while cordial words from many not present evidenced the universal opinion of the profession that Baltimore ought to become "the seat of a school of medicine such as does not now exist in this country."

Mr. Francis T. King, President of the Board of Trustees, made the opening address on behalf of the Board, and reported as a result of their stewardship the seventeen buildings now finished, and the sum, in addition to the trust originally received, of $113,000 surplus income reinvested. Dr. John S. Billings, U. S. A., as a medical critic, demonstrated the special adaptability of the hospital structures for two distinct lines of work—*i. e.*, the care and cure of the sick, and the education of trained practitioners and investigators—making frankly prominent the great need of development in this latter field of medical effort. As acting-chairman of the Hospital Board and President of the University, Mr. Daniel C. Gilman explained the close connection that has always existed between the discoveries of pure science and the practical amelioration of human pain—a relation that becomes still more intimate where research and application go hand in hand and are encouraged by adequate endowment.

The lay public may here fairly ask why the "opening" of this particular hospital, with less than two hundred free beds, should be held to mark an era in medical education. The answer to this query can best be given, first, by an account of the growth of the hospital *idea* as finally embodied in the present group of buildings, and secondly by an outline of the plan of organization which gives the hospital organic relation to the University, so that, in the words of Dr. Billings, "the true university spirit will pervade, stimulate, and encourage the hospital work."

The embryo which has developed into such an institution first appears in a letter of Mr. Hopkins himself, addressed to his Trustees in March, 1873, in which he directs that the plan they select must permit of symmetrical additions to the buildings first constructed, so as ultimately to care for 400 patients, while in construction and arrangement "it must compare favorably with any other institution of like character in this country or in Europe." The majority of the patients were, "without regard to sex, age, or color," to receive medical or surgical treatment free of charge. There must be, in connection with the hospital, a training-school for female nurses, and a home for convalescent patients in the country. Finally, "*in all arrangements in relation to this hospital, bear constantly in mind that it is my wish and purpose that the institution shall ultimately form a part of the Medical School of the University.*" Mr. Hopkins died shortly afterwards, and in 1875 the Trustees directed their building committee "to confer with five distinguished physicians . . . who have made hospitals a special study." The physicians selected were men of reputation from Boston, New York, Philadelphia, Washington, and New Orleans, who consequently had grappled with the same general problems, but with varied conditions of climate, temperature, and types of disease. Elaborate plans were furnished, which, printed in book form, were sent to specialists all over the civilized world for suggestions and improvement.

At that time the main question for city hospitals was the choice between the pavilion system, which admits buildings of two or more stories, permanently constructed (of which the Herbert Hospital in England was instanced as "a good modern type"), and the barrack system of one-story structures, destructible in whole or in part, which had been successfully used in our civil war, but of which no prominent example then existed. With rare good sense, the Trustees expressed the belief that there should be "some general principles of hospital hygiene and of hospital treatment, fixed and immutable," and that their aim was to adopt that system, pavilion, barrack, "or a selection of the good features of each," which would result in a harmonious whole, specially adapted for the advanced educational work contemplated. Both the Trustees and their medical advisers felt that the plan of the hospital must depend upon the nature and degree of its relations to the Medical School of the University, and that its value as a pathological department of a leading educational institution should be the pivot on which both plan and organization must turn. All realized that an opportunity had presented itself to form a medical practice school which, being financially independent, could afford to consult the welfare of students and the advance of knowledge. Thus fortunate in its freedom, it was clear that the Johns Hopkins Medical School should strive for "quality, not quantity; the seal of its diploma should be a guarantee that its possessor is not only a well-educated physician, but that he has learned to think and investigate for himself, and is therefore prepared to undertake, without danger of failure from not knowing how to begin, the study of the many problems still awaiting solution."

Such being the united lay and professional interpretation of Mr. Hopkins's wishes, let us see how the Trustees have carried them out, and whether this hospital can justly claim the title given it by an eminent London surgeon, "the hospital of the century."

The grounds of the hospital, including four entire blocks (about fourteen acres), through which streets have been permanently closed, are one hundred feet above tide-water. The buildings are of brick, with trimmings of dark blue-stone. These include an administration building, apothecary's building, kitchen, laundry, bath-house, nurses' home, male pay ward, female pay ward; an octagon ward, two-storied; three common wards, one story; an isolating ward, with twenty rooms for patients; nurses' rooms, bath-rooms, diet kitchen, etc., amphitheatre, dispensary, and the pathological building. All these are widely separated, and, with the exception of laundry, autopsy buildings, chapel, and greenhouse, are connected by means of covered corridors one story high, while the top of these corridors forms an open terrace walk on a level with the ward floors. One-half the free wards, those on the south side of the central garden, are still to be built, as needed. Every appliance and arrangement that the skill, ingenuity, and experience of modern science in Europe and America can suggest has been availed of in the plan and finish. Intelligent care of the sick, absolute freedom from contagion, convenience for study and research, and facilities for demonstration and instruction are all provided for, so that a combination of advantages for patient, student, and physician is here attained to an extent not possible in other less extensive or less generously endowed institutions. An elaborate system of air and water-pipes, flues, shafts, and valves, with independent coils and cocks for each ward, permit at will ideal conditions of ventilation and temperature. One hundred and fifty degrees of Fahrenheit can rapidly be changed to the temperature of the external air; nay, more, in each ward the air surrounding every pair of beds can be regulated separately to meet the needs of different cases, while foul air can be taken off from the top or the bottom of a ward. The nurses' home has room for sixty women.

Provision is made for thirty resident students in addition to the medical staff. Besides the ordinary hospital ward service, these favored students will have such practice and instruction as comes through a large dispensary and well-equipped pathological laboratories, ample space existing for work in every branch of pathological investigation. When we are told that only about 5 per cent. of the graduates of the eighty medical schools of the United States have "had any opportunities worth speaking of to study and treat disease in the living man," we can understand why those members of the profession who have its honor, as well as the increase of knowledge and the decrease of suffering, at heart, have looked with hopeful and cordial expectation to the opening of the Johns Hopkins Hospital and the establishment of its Medical School—that school which is to be the link between it and the University, between research and practice, between knowledge and mercy.

"From the time of the first announcement of the Hopkins bequests to the present, scientific men all over the world have been keenly interested in the plans and methods of carrying them out. Whenever and wherever the problems of higher medical education have been discussed within the past ten years, there has been speculation as to the probable course of the Johns Hopkins Medical Department and the influence it would have on the standard. . . . Some of this influence has been even exerted in advance, . . . for the plans of this hospital have stimulated changes in some of our best medical schools, and have been copied . . . in some of our latest hospitals."

To those fortunate students who, "with a sound basis of preliminary education, . . . and with acquirements but little below those for granting the B.A. degree in the University, when they commence," can prove their fitness for admission to its wards and laboratories, the Hopkins Hospital offers lavish opportunities for study in the wide field of medicine. Its opening and the establishment of the Medical School promise an advance all along the line of higher medical education. Its scheme for investigation and practice brings into due relation the many paths that open up to the earnest student and lover of mankind an approach to the true anthropology of the future, "the culmination of finite knowledge." We can vaguely measure the value of the heritage of the intelligent medical student of this generation, under advantages like those of the Hopkins bequest. It is because the men who control it have so far shown due appreciation of its capabilities, opportunities, and responsibilities, that the medical profession has wished it Godspeed.

In the selection of officers, the Trustees are pursuing the same policy which, within the first decade of its existence, gave the work of the University a world-wide reputation. The cosmopolitan character of the few appointments so far made on the hospital staff stamps the national character of the institution. Men and women in the prime of life, they have drawn their past training and experience from the best universities, hospitals, and training-schools for nurses in this country and in Europe, and have willingly left fields of usefulness in Boston, New York, Philadelphia, Chicago, Canada, and London to take earnest part in the building up of this new clinical department of a great medical school that is to be.

BOULANGER IN ABSENTIA.

PARIS, May 2.

"EXIT BOULANGER." The drama which has kept France and Europe attentive for several months, has been interrupted in the most unexpected manner. The hero is gone, is no longer on the stage. This *coup de théâtre* has taken everybody by surprise, and, for a few hours at least, the curtain has fallen.

In order fully to understand this surprise, we must go back to the last election in Paris, which took place on the 27th of January. The Government had opposed Boulanger with all its power, and he was elected by an enormous majority; 250,000 electors had cast their votes for him, and, for every three men you met in the streets, you could safely assert that two had voted for the "General." When the result was proclaimed, Paris seemed mad with joy, and people said to themselves, "There is no Government left (*il n'y a plus de gouvernement*)." I will not now analyze the reasons of the Government's defeat. It is enough to say that at the moment when General Boulanger was daily attacking the Constitution and urging its revision, the then Prime Minister, M. Floquet, wished to force the Chambers to unite in convention, and spoke himself of revising a Constitution which it was his duty to defend. He acted like a fireman who should himself set fire to the house. The absurdity of such a policy was felt even by the Radicals, and, on some trivial question, the Cabinet was upset, and the section of the Republicans which had opposed M. Floquet's revision scheme had to form a new administration. This administration had in reality no programme: its only mission was to destroy Boulanger—"delenda est Carthago." Jules Ferry, who, ever since the Tonkin affair, has been so unpopular that he cannot himself be the head of a Cabinet, has been, in reality, behind the scenes, the inspirer of the new policy: the present Ministers may be considered as his Ministers. Jules Ferry had long ago declared war on General Boulanger, had called him a "Saint-Arnaud de café concert," had opposed his own unpopularity to the General's popularity, had especially turned the sentiment of the Senate against a man whom he represented as a future dictator.

The Senate has many attributions. Some rather vague articles of the constitutional laws give it the right to erect itself into a high court of justice, and to judge the President, the Ministers, and generally all persons who have endangered the security of the State and entered into any plots against the State; when the plot has become an *attentat*—that is to say, when there has been what our law calls a beginning of execution (*commencement d'exécution*), to assume all the rights of a court of law, to make rules for the procedure, the interrogation of witnesses, etc. As it is distinctly said in the constitutional law that the Senate has such rights only in case there has been an *attentat*, the Senate, instead of contenting itself with passing rules for a state trial, made a law which organized its own powers in view of such a trial, and, after this law was voted, it was sent to the Chamber of Deputies, in order to become a complete law. It was passed by the Chamber of Deputies, and it must be well understood that the high court of justice, with all its machinery of procedure, all its definitions of competency, everything, in fact, that constitutes its mode of action and its power, is acting in accordance not with any interior or traditional rules of the Senate, but with a law hastily passed for the special case which is now in view.

It is not the first time that our High Chamber has sat as a court of justice: the Peers of the Restoration judged Marshal Ney, but Marshal Ney had clearly committed an *attentat*, he was guilty of high treason. Sent against Napoleon, who was returning from Elba, he joined Napoleon, though he had promised Louis XVIII. to bring him back as his prisoner. The Peers of 1830 had to pass judgment on the Ministers of Charles X.; but these Ministers had signed the famous *ordonnances*, which were a violation of the *Charte*—they had not only plotted such a violation, they had accomplished it. I might cite other state trials under Louis Philippe, under the Republic of 1848, under the Second Empire; all these trials were always determined by positive deeds, by crimes, by open acts of rebellion. The last occasion was the death of the journalist Victor Noir, who was shot by Prince Charles Bonaparte, towards the end of the Second Empire.

In the present instance, it is difficult to understand why the Senate has been constituted as a high court of justice. There is nothing in what we know which can justify the convocation of an exceptional tribunal. We have a complete arsenal of laws, which seem quite sufficient in case M. Boulanger or his friends have done anything in view of corrupting the army, or the public functionaries, or the police. As for their attacks on the present members of the Government, or the Chamber, or their open desire to revise the Constitution, we see nothing illegal in them. The country has been covered with cheap pictures of Gen. Boulanger, but every Frenchman has a right to send his photograph or his picture to the seven millions of French electors. Paulus, the café-concert singer, has popularized the name of Gen. Boulanger, in singing "En revenant de la revue," and "C'est Boulange, Boulange, lange, c'est Boulange qu'il nous faut," but Paulus has also sung songs on Gambetta; he may tomorrow give us another political lesson in music. When M. Thévenet, a Lyons lawyer, who has become Minister of Justice in the present Cabinet, sent for M. Bouchez, the Procureur-Général, and asked him to sign a report which was to be addressed to the Chamber of Deputies, in order that Boulanger might be arrested, M. Bouchez asked, not unnaturally, to see the documents which had formed the basis of this report. The documents, M. Thévenet said, were kept in a room in the palace of the Minister of Justice; the keys of the room could not be found; M. Bouchez was pressed to sign, and he preferred to resign. A successor was found for him in the person of a M. Quesnay de Beaurepaire (who has written some novels under the name of Glouvet). It was during this interim that Boulanger was advised that the Minister of Justice would ask the Chamber for permission to arrest him; and, before the warrant could be issued, he had just time to leave Paris and to flee to Brussels.

Nothing can equal the astonishment produced by this flight. Paris is only five hours distant from Brussels, and for days there was an incessant exodus of visitors to Brussels. The tranquil little city was becoming the centre of a political agitation, and Boulanger, feeling that he was becoming embarrassing to the Belgians, who are a neutral nation, and obliged by their neutrality to be on their guard on all sides, chose to go to England freely, so as not to be obliged to go unwillingly a few weeks afterwards. What will be the effect of his absence? We have many proverbs which answer this question: "Les absens ont toujours tort," "Loin des yeux, loin du cœur," etc. I have from the beginning felt that the flight of General Boulanger would greatly hurt his cause. If he had taken hold of the popular imagination, it was in great part because he was a soldier, a young general. His biographies, spread over the country by millions, represented him as a dashing soldier, on his black charger on the battle-field, on a barricade, always in a heroic attitude. He was the new Bonaparte, Bonaparte on the bridge of Arcole. He was destined by Providence to rid the country of the swarm of lawyers, of *avocats*, of politicians, to chase the money-changers from the temple, to give us a strong, authoritative, energetic Government. The idol of the popular mind has lost something of its prestige.

In vain does Boulanger say, to explain his flight, that he was and is still ready to appear before his natural judges—before the judges of the correctional courts, or before the jury of the Court of Assizes; that he only refuses to appear before the Senate, as the Senate is composed of his political enemies. When you play for such high stakes as the government of a great country, something must be risked; and I cannot help thinking that, in his own interest, M. Boulanger would have done better to allow his enemies to imprison him, and to make him stand a solemn trial before the Senate. If there

is nothing in the evidence which will be brought against him to prove that he attempted to change the government by violent means; if he had been face to face with his accusers, and had been able to show and to prove to them that he had done unto them what they had done unto other governments or administrations, the Senate, even as it is now composed, would have found it very difficult to convict him. And if he had been unjustly convicted, there would have been a great popular reaction in his favor.

"L'absence est le plus grand des maux." The public mind is always timid; the popular imagination which was a few months ago surrounding the image of Gen. Boulanger with ideas of courage, of heroism, surrounds it now with mysterious ideas of treason, of corruption. "Where does the money come from?" You hear this question on all lips. People are beginning to inquire into the budget of Gen. Boulanger: how can he lead the life he leads, and keep in exile a sort of court? Who pays for the papers, the pamphlets, the portraits? Some will tell you that certain rich Americans are giving themselves the amusement of paying for a revolution in France. Others make dark hints, speak of secret funds, of fortunes made by unfair means. The legend is attacked in its very origin.

At the present moment it looks as if the popularity of Boulanger were waning. Many people are not a little ashamed of having expected so much of him. The great majority look for a distraction. The Eiffel Tower, the Exhibition, the centenary of 1789, console many for the loss of their idol. You feel in the country a general sentiment of uneasiness, of vexation; it is like a spoiled child who has been robbed of a favorite doll. As for the future, nobody thinks of it; it is all darkness. The various parties had been disorganized by Boulangism, they have not yet been reorganized. If there were general elections to-morrow, the electoral world would be a perfect chaos, without any centres of crystallization.

MR. FROUDE'S NOVEL.

DUBLIN, April 27, 1889.

THE title of romance is hardly applicable to Mr. Froude's new book, 'Two Chiefs of Dunboy, an Irish Romance of the Last Century.' It does not contain a suggestion of "love," much less love passages or any interesting position as between man and woman, except, perhaps, the hero's midnight return over the mountains under the guidance of a peasant girl. There is no story. Yet the book is readable. There are brilliant descriptions which will hold their place in the memory. The conversations are heavy and unnatural. Kerry peasants and settlers of a time when in fact little but Irish was spoken in Munster, speak among themselves, and address to each other in what might be thrilling situations, essays conceived in the spirit of the present day; and where we have the vernacular, it is too much the stage Irish vernacular of the music-halls.* The work is, in truth, not a romance; it is a political essay—'The English in Ireland in the Nineteenth Century' recast and somewhat modified for present electioneering purposes. It will, on the whole, hardly add to the prestige of Mr. Froude as an author. It shows all his faults as a partisan exaggerated. The canvas is too small, we may say the object of the book (the belittling of a people) is too hateful, to allow full play for his genius. It may provide ready to hand a few more arrowheads for the quivers of Liberal-Unionist orators; it certainly will not attract the Irish towards Liberal-Unionist rule or the rule of the professors.

The scene is laid between Nantes and Kerry in the middle of the last century. The narrative has to do with the fortunes of a settlement of Puritans, in Kerry, under the guidance of a noble-hearted Col. Goring, doubtless suggested by Col. Gordon. There is a vivid picture of the smuggling of goods and men carried on with France consequent upon the insane commercial code of the period and the repressive measures to which the Catholics were subjected. Morty Sullivan is the hero on the Franco-Irish side—a man with all the supposed faults of the Irish nature and all its supposed virtues—a man whose character evidently bettered with the author as he proceeded. We have an ideal and in the main natural Irish exile of the period, Patrick Blake of Nantes, who has become rich by the smuggling trade with Ireland; whose hopes for his country's relief from oppression are ever green; who is always ready to spend and be spent in the cause. The description of his stores and residence on the Loire will long rest in the memory of the reader, as will that of Col. Goring's rose and fuchsia-covered cottage over Dunboy harbor—an anachronism, by the by, as fuchsias were a much later importation into this country.

As for the Irish in general, Celts or Saxons, they are a lost people, whether in the wilds of Kerry or amidst the quasi-civilization of Dublin. Indeed, on the whole, the real natives are described as less repulsive than the degenerate descendants of the planters of Cromwell and William III.

"The Irish are only dangerous to those that are afraid of them" (p. 259).

"You know enough of the people of Ireland to be aware that the last thing you can get from any of them is the truth" (p. 269).

"The Irish make good soldiers, sir," answered Goring, "and no man can be a good soldier who has not fine qualities in him of some kind. Certain races are like the nobler kind of dogs. Train a dog and rule him, and he becomes brave, loyal, faithful, affectionate, and wise. Give him liberty, and he grows into a mangy cur or a ferocious wolf" (p. 287).

"The Irish race have been always noisy, useless, and ineffectual. They have produced nothing, they have done nothing, which it is possible to admire. What they are they have always been, and the only hope for them is that their ridiculous Irish nationality should be buried and forgotten" (p. 350).

"None are braver than we when cows' tails are to be cut off or the enemies of the country shot from a hiding-place" (p. 370).

"If you can believe those glorious ballad singers and annalists of ours, we were no better than cannibals of the Pacific" (p. 371)—another of the many anachronisms which appear to me to pervade the book. The Pacific was little in the minds of even educated people until after Cooke's discoveries, some twenty years later than the date at which the narrative is laid.

"I don't want children of mine to grow up ignorant heathen, or Papists, which is worse" (p. 336).

The impression given of the fiendish barbarity of the Irish people; the abandoned frivolity of the upper classes; the general drunken confusion of society; the absence of all order, is in nowise justified by contemporary travellers and writers. Things were bad enough, and evils were natural and inevitable in the system under which the country groaned. The picture Mr. Froude draws of Ireland at that time is about as fair as one would be of England at the same period based upon the Newgate Calendar, the then undoubted venality of political life, and Hogarth's illustrations. Seeing that, according to the author, the Anglo-Irish were as bad as the Irish themselves, we are left somewhat at a loss as to his remedy for the state of things delineated in this book, which is evidently meant to apply to Ireland as it now is. His only hope seems to lie in a new Cromwell and a fresh plantation of Ireland every generation. Mr. Balfour is perhaps about as near as possible to the author's ideal, considering the sickly prejudices of the nineteenth century.

"God help Ireland, then," said the Colonel sorrowfully. "God help us and send us another Oliver" (p. 292).

"When Ireland was conquered by Cromwell, and the Irish people, like the Canaanites, had forfeited their estates by their cruelty and wickedness, the land was distributed amongst the soldiers of his army. There were those who thought it ought to be apportioned by merit. But the noblest and best preferred to leave the choice to Providence, and declared they would rather receive by lot from the Lord a patch of barren mountain than the finest soil in Ireland by the judgment of man. What those saintly men said to Cromwell, I must say to you" (p. 323).

The proofs of those men being so saintly as depicted in the subsequent history of the country since it was parcelled out among them, are not so evident. The fault doubtless was that any of the accursed Irish race was left; the desirability of their total extermination is more than hinted in one passage.

Some of the descriptions of scenery are charming. "Beautiful it was as ever; the quiet islands of the Kenmare River, dark and solid, and the far-off Skelligs rising blue on the horizon, as if shaped out of transparent mist"—this and many other passages show that Mr. Froude well knows the scenes he delineates. Probably by yachting and boating he became familiar with the coast. The interest of the book would have been enhanced by the addition of a map of Kerry. We have read few more spirited descriptions of a sea-chase and fight than that between the *Æolus* and *Doutelle*, and, seeing that the Irish privateer had the best of it in the end, the passage may yet find a place in Irish reading-books.

The volume has many and weighty admissions on the Irish side of the question:

"They [the Irish] would bear from their natural leaders what they would not bear from us; and if we have not made their lot more wretched, we have not made it any better. There is not a race in the world who would not be happier or more loyal if they were governed by a firm and just hand" (p. 80).

"The mountains bear our names, our hearts are in our glens and among our own kinsfolk, and we wish for no better. Here we have lived; here, if it please your Honor and his Lordship, we would like to remain undisturbed, and if ye will just lave us alone it is all that we will desire of ye" (p. 127).

"Each people in this world likes its own ways, and little is the good that comes from forcing them" (p. 129).

"The sun never shone upon a land more beautiful than Ireland as nature made it. It had possibilities of unbounded fertility, if human industry and human sense would do as much for it as had been done for the most neglected corner in any other country in Europe. The people were passionate and emotional, capable of devotion and self-sacrifice, loyal and affectionate to any one who would lead them and care for them. But the soil was a desert, and some subtle poison had corrupted the character of a race. . . . What did it all mean? Why, after 600 years of Saxon rule, did the Irish race remain essentially unchanged? If England was not guilty of their disorders, she had not found the spell that would cure them" (p. 156).

"The Irish, lawless though they be, feel as much horror as other people at the baser forms of crime" (p. 170).

"'I can never forget this night,' he [Col. Goring] said. 'I have heard others say that the faults of the Irish are the faults of a noble

*Mr. Froude falls into the common error of making our people mispronounce *ie* and *ee*—*prâst* for *priest*, etc.—which they seldom or never do. When the mass of the population learned English, *ea* was pronounced â (as in hay) by educated people—and this they still very generally, in some parts of the country, adhere to—*say* for *sea*, *baste* for *beast*, *tay* for *tea*. Inaccurate observers then naturally think it all right to give *prâst* for *priest*, *same* for *seem*, etc.

nature which has been wrenched out of its proper shape. I believe it now; for in no race in this world could I have found man or woman who would have risked what you have risked to save one whom you have been told to look on as the enemy of your country'" (p. 175).

At pages 293 and elsewhere is eloquently set forth the case of the destruction of Irish industries for the supposed benefit of English traders:

"When the actions of men are measured in the eternal scale, and the sins of those who had undertaken to rule Ireland and had not ruled it are seen in the full blossom of their consequences, the guilt of Morty, the guilt of many another desperate patriot in that ill-fated country, may be found to bear most heavily on those English statesmen whose reckless negligence was the true cause of their crime" (p. 455).

Mr. Froude's novel is meant to illustrate an episode in the struggle between what he considered English civilization and Irish barbarism. It bears the motto, "Under which King, Bezonian? Speak or die." Irish barbarism has, according to our author, obtained the mastery. Force is the only remedy.

I turned from the perusal of this book to attend a great meeting in Birmingham, where some 5,000 of the English people expressed their determination to pursue a policy of justice—of throwing the responsibility of government upon the Irish people themselves. I felt the heart of that great nation beating with hopeful trust in us. I moved among the best of English men and women who had devoted themselves to the Irish cause. Thoughts of true union flooded my own being and marked the faces and demeanor of other Irishmen there (rebels to a rule such as we have had in the past, and such as endures under the present administration); and I had no difficulty, when I had returned to the perusal of this volume, in answering the question, "Under which king?"—under which policy is the settlement of Ireland to be effected: coercion or conciliation; that advocated by Froude, or that of Gladstone? D. B.

Correspondence.

ANOTHER VIEW OF ARIZONA.

To the Editor of The Nation:

Sir: In the *Nation* of the 4th inst. is an article, dated March 15 and signed "W. G. B.," which does great injustice to Arizona, her climate, resources, and people. I am certain the writer knows little of the vast and varied resources of this Territory or its capacity for Statehood, and still less of the desires of her people on the subject. The Legislature which recently adjourned provided for the election of delegates to a constitutional convention to be held in this city in January next, and in doing so obeyed the wishes of nine-tenths of their constituents who are anxious to see Arizona admitted to the Union. "W. G. B." misrepresents popular sentiment when he affirms that "the proposal for Statehood falls rather flat, except with a few elderly politicians who feel that they are fitted to adorn the Senate Chamber of Congress without further delay." The great majority of us feel that we have outgrown Territorial nonage, are able to manage our own affairs in our own way, and are therefore ready to assume the duties and responsibilities of Statehood.

With an extreme length of 378 miles and a width of 339 miles, an area of 113,929 square miles, a magnificent patrimony of 72,915,560 acres, a soil capable of producing every variety of fruit, vegetable, and cereal known to the temperate zone; mines of coal, copper, iron, gold and silver, inexhaustible in extent; lakes of salt, springs of petroleum, and forests of pine, cedar, spruce, juniper, ash, and oak of as great extent as in any State or Territory; with a population of about 100,000, rapidly increasing—why should not Arizona say to Congress, We are ready and willing to receive the jewels of State sovereignty?

Arizona has a taxable property, as officially stated by Governor Zulick in his official report to the Secretary of the Interior, of $75,000,000. She has 20,000 square miles of lumber forests; she has in her mountains, parks, and plateaus, where the rainfall is from twenty to thirty-five inches per annum, twenty millions of acres of land, whose enormous crops of wheat, oats, and root vegetables can be grown without irrigation. The completed canals and those under construction will reclaim two millions of acres of land, every twenty acres of which will support a family. The amount of land which can be reclaimed under a thorough system of irrigation, by impounding the storm-flood water and reserving it for times of want, cannot be definitely ascertained until the United States Geological Survey has concluded its labors, but that it will be very large goes without saying, for in many localities, as in the Little Colorado Valley, where the rainfall is from twelve to fifteen inches and the mountains surrounding furnish natural basins for the storage of water, it is an inexpensive task to store all that is required for the one or two irrigations necessary to raise a crop.

Lieutenant Wheeler, in one of his reports of exploration in Arizona, institutes a comparison between that portion of this Territory between meridians 111 and 113° 45′ and parallels of latitude 34° and 35° 45′, by no means the best arable portion, and the eastern portion of southern California and southern Nevada in the same latitude.

	California and Nevada Per Cent.	Arizona Per Cent.
Agricultural, irrigable, and arable land.	2	25
Timber	6	10
Grazing	88	30
Barren	4	35

It is quite certain that the body of agricultural land irrigable and arable will make 25 per cent. of the whole, the timber lands 20 per cent., the grazing lands 35 per cent., the barren lands not more than 20 per cent.; and the so-called barren lands are well grassed, and have many mines rich in mineral, gold, silver, and copper, that will be worked to a profit when railroads give cheap transportation on products and supplies.

"W. G. B." quotes approvingly from a recent article in the *Political Science Quarterly* as follows, to the effect that "the only occupations possible on any extended scale are mining and grazing, both of which tend to produce a system of manners and morals, personal and political, entirely unlike those of agricultural communities." Had he been familiar with the history of California, he would have known that in the early days it was affirmed that she could never grow wheat for home consumption; that up to fifteen years ago the central portion of the State, where now are the magnificent vineyards of Fresno County, the fields of grain and alfalfa that have advanced the lands of Kern and Tulare Counties from two dollars to fifty dollars per acre, was declared to be worthless except for sheep. Up to ten years ago the great possibilities of southern California were unknown and unrecognized. Orchard lands, unimproved, which with water rights now command from $200 to $500 per acre, could then have been purchased at from $5 to $15 per acre. The physical features of central and southern Arizona are the same as those of southern California. The Santa Cruz, San Pedro, Salt, and Gila Rivers, which drain this section, afford an abundance of water for irrigation. The soil, an alluvial deposit varying in depth from six to twenty feet, made up from the detritus of the surrounding mountains through the wash of ages, has a vigor of production unsurpassed in the temperate zone. Combining the fertility of pure alluvium with the warmth of tropical sand, it reaches the acme of fecundity. The Pima and Maricopa Indians, whose reservations are in the Salt and Gila valleys, have for centuries cultivated the same lands without change of seed or exhaustion of the soil, producing, after their crude system of agriculture, better average crops than are grown in any of the wheat-growing States east of the Mississippi River.

"No one," says Orange Judd of the *Prairie Farmer*, "will waste any sympathy upon farmers compelled to irrigate their lands in California, in Colorado, in New Mexico, or Arizona, providing they have fertile soil, a genial climate, and enough of ready available water for irrigation." Doctors disagree. "W. G. B.," speaking of Arizona farmers, says: "They work the farms with their own hands, struggle helplessly with the great railroads over rates, and in too many instances wear away an unhappy life under the money-loaners' 2 per cent. per month." In no country is farming more profitable than in Arizona. The ruling rate of interest on real-estate securities is 12 per cent. per annum. In the valleys of the Salt and Gila, where there are reclaimed more than 500,000 acres, which the canals now under construction will treble, there has never been a farm sold under foreclosure; the same is true in a general sense of farms and farmers in Verde, Williamson, Little Colorado, and other valleys in northern Arizona. There is no place where a man upon a lesser acreage can support a family and accumulate a store for old age than in central and southern Arizona. Wheat yields from twenty to twenty-five bushels per acre, barley thirty, alfalfa from six to eight tons. Raisin grapes give a greater return than in any portion of the known world: the vines at six years give eight tons per acre of grapes, which, on account of the great amount of saccharine matter and the facilities for curing (no artificial heat being required), yield 35 per cent. raisins. All citric and deciduous fruits ripen here three weeks earlier than in the most favored localities of California. In a country where alfalfa gives a net profit of $25 per acre annually, as is the custom in all parts of Arizona, and where the orchardist sells his crop on the trees or vines at from $100 to $200 per acre, it is idle to waste sympathy upon the farmer.

The settlement of Arizona has been retarded by Indian outbreaks; for thirty years after it passed under the American flag there was a struggle between civilization and barbarism, and all of us mourn the loss of friends and kindred, the best and truest of our race, whose lives were sacrificed in the long and deadly struggle. With the removal of the Chiricahua and Warm Springs tribes to Florida, peace was insured to the Territory, and her advance has been most rapid. Capital and labor are

combining to develop all our latent resources. The Walnut Grove storage reservoir, built at a cost of nearly a half-million dollars, in Yavapai County, it is claimed, will add 100,000 acres to the cultivable area of that locality. A like company is being organized in Pinal County, calculated to reclaim 1,000,000 acres, one in this, Maricopa, to serve 250,000 acres, besides smaller enterprises in other localities.

It is a fact, demonstrated by scientific investigation, that Arizona at one time was most densely populated. In the Salt River valley, according to Professor Cushing, there was a population of 300,000 souls; in the valleys of the Santa Cruz, the Pueblo Viejo, and along the Gila for several hundred miles, are found traces of old water-ways, the ruins of dwellings, the tools and farming utensils of the husbandmen of long ago, who supported themselves by agricultural and horticultural pursuits. If this land, seven or eight centuries ago, as archæologists claim, under the rude processes of cultivation known at that time, supported a dense and prosperous population, why, under modern conditions, can it not be done again? It is true that the cultivation of the soil by the artificial application of water is somewhat new to the Eastern farmer, as are also the crops; but with water to use in quantities great or small as his crops require, he has no concern about failure, and an abundant harvest is always secured. Oranges, lemons, olives, raisin-grapes, and kindred products are also a new thing to him as to "W. G. B.," but it is a most profitable investment for labor and money, and one that can be at all times relied upon to yield a profit of at least $150 per acre when the trees and vines are in full bearing.

What Arizona needs is more railroads. Had it not been for the restrictive legislation of the Forty-ninth Congress in limiting Territorial indebtedness to 4 per cent. of the taxable property, there now would have been a road from Prescott to Phœnix, which would have opened up a large agricultural, mining, and farming country; the road from Flagstaff would have been built through Globe into the Gila and Salt River valleys, which would have opened the great forests of the Mogollon, the coal fields of Gila County, besides making available a large body of rich arable land, where wheat, oats, and root vegetables can be grown without irrigation. At present neither Territory, county, nor city can lend its credit to works of internal improvement. The Harrison act of 1886 blocks the road. Congress says practically to Arizona, We will not help you to reclaim your desert lands, build railroads, nor develop the sources of wealth Nature has placed at your door; and *you shall not do it.*

"W. G. B." says: "As to the direct effect of climate, there has not been time to test it. Few men have been here as long as twenty years, and the most thriving towns of the south are scarcely ten years old." Of the population of Arizona there is as large a proportion who have dwelt here for twenty years as in any Territory. The principal southern towns are Tucson and Phœnix, each with a population of about 7,000. Tucson, next to San Augustine, is the oldest town in the United States; Phœnix was located in 1869; Florence in Pinal County is sixteen years old, Yuma (Yuma County) thirty years old, Tombstone (Cochise County) eleven years old. The climate has not been tested? Write any reputable physician what he thinks of it; he will tell you that there is no malaria, that the winds which in Southern Arizona rob the day of oppressive heat, pass from the Gulf of California over several hundred miles of desert which acts as a desiccant, leaving the atmosphere dry to the last degree, and that in consequence it is the sanitarium of those afflicted with lung troubles.

The warmest weather I have ever felt was in New York when the thermometer stood at 100°. In Arizona we have a variety of climate equal to the Empire State. Around Prescott and Flagstaff, and in other localities of from 4,500 to 6,000 feet altitude, the days in summer are pleasant, the nights cool, always requiring one or two pairs of blankets for comfortable sleeping. In the lower valleys it is warm from June 15 to September 15. During this time the thermometer will range at midday from 105° to 112°, about the same as at Hanford and Bakersfield, California; but, strange to say, there is no fever, and men in the harvest field do full days' work without exhaustion or sunstrokes. Lieut. W. A. Glassford, United States Signal Corps, in referring to the heat in our southern section, says:

"It is recorded as extreme, yet no one suffers, and sunstrokes are unknown. This is usually accounted for from the purity and dryness of the air. Both are true; but the dryness is perhaps the correct reason. . . . The ordinary exposed thermometer gives the shade, the wet bulb the sensible temperature. The difference is illustrated by wetting one hand and exposing both to the atmosphere. One is dry and feverish, the other moist and fresh. I have calculated the difference between the shade and sensible temperature at Yuma during the heated hour of the day and it is about 30°. At New York or Washington it is only a few degrees, and is often identical. The highest shade temperature ever recorded at Yuma is 118°. When the heat is at this point the sensible temperature is about 88°. The shade temperature at New York being 105°, the sensible temperature is certainly near 100°. The difference between the mean shade and the mean sensible temperature for July is over 17° at Yuma. These considerations of the sensible and shade temperature will account for the absence of any detrimental effects from the extreme heat of Arizona."

As to the morals of the people of Arizona, we compare favorably with any American community. Men are as true to their families and our officials as faithful to their trust here as elsewhere. In no city or town are private dwellings locked and barred at night; burglaries are rarely known. That "Nevada, Utah, and Montana are Northern States" gives them no advantage over Arizona, which has in natural wealth resources equal if not superior to either of them. We have wealth and population sufficient to take care of ourselves; and as a Territorial government was never intended to be more than temporary, we feel that Congress should not longer deprive us of a voice in the Government we are taxed to support.

T. E. Farish.

Phoenix, April 26, 1889.

"LABOR" AND PRISON LABOR.

To the Editor of The Nation:

Sir: The *Nation* very justly denounces the folly exhibited in the management of some of the prisons in our country; *i. e.*, in that the convicts are kept in idleness. It also seems inclined to blame organized labor for such condition. Now, as President of the Federated Trades here, and as one who has sat in the councils of labor unions in several States, I claim to know something of what workingmen desire in relation to this matter.

In brief it is this: They want all contractors driven out of penal institutions. They want the State-account system introduced. They want the business confined to one or two industries.

There you have it in concise form, and I fail to see any injustice or folly in the demands. The trouble is, that the workingmen are fooled out of their promised legislation through the influence of those who profit by the contract system. They elect men who promise to abolish contracts, and then the contractors get in their work by compelling the people to support the convicts in idleness, thus making the legislation so odious that the people gladly rush back to the contract system in order to be rid of the undue burden of supporting the convict in idleness. If the plan were carried out in full, it would be beneficial all around. We can always tell closely how many convicts there will be in a State for a year to come. Thus we know how much raw material to purchase and how much of the finished product will be placed on the market at a certain date. It introduces order into the present anarchy of convict-labor management, and can be made to pay, too, if it's pay we are looking for.

Eugene Hough.

Oakland, Cal., April 29, 1889.

LOCAL AND STATE ASPECTS OF PROHIBITION.

To the Editor of The Nation:

Sir: In your editorial of May 2, after referring to the decrease of crime in Iowa under prohibition, you speak of a combination of local option and high license as if it would surely bring to the State all the good results, at least, of prohibition. Now the decrease in crime which has been noted, if it is in any way the result of prohibition, must occur wholly in the rural districts, for the free whiskey which prohibition gives the cities must certainly work in the other direction. Do we, then, get the same results from local option as from State prohibition, in the country and smaller towns?

At first glance it certainly would seem as if local option ought to give the country the benefits of prohibition while avoiding its evil effects in the cities. But this is not the case. All through this State, for instance, are communities which would give majorities for prohibition on a State vote, but in which local interests and friendships make it impossible to obtain the passage of local anti-license laws; and when, in addition, one considers the communities without a prohibition majority, but with near enough to one to enable a State law to be fairly well enforced, it is evident that, for the State at large, the two systems produce very different results.

As a believer in high license and local option, I mention this consideration because it should be taken into account in a fair judgment on the Prohibitionists' claims. H. G.

Omaha, Neb., May 5, 1889.

A GOOD AND GREAT MAN'S OPTIMISM.

To the Editor of The Nation:

Sir: In cheering contrast to the gloomy utterances of Bishops Potter and Huntington and to your somewhat pessimistic article on "A Century of Democracy," in the *Nation* for May 2, I notice the glowing statement of the Hon. John D. Long in your truly pious contemporary, the *Independent* for April 25. Mr. Long contributes a short article on "Washington, the Good and Great Man," in which he makes the following assertion, which certainly shows a sublimely optimistic faith in "progress": "*Men were not so good or so great in his [Washington's] day as in ours;* and yet Washington is preëminently the good and great man, and nothing describes him better than that simple phrase." (The italics are mine.)

Whether these better and greater men are common to the whole country, or whether they are limited to some particularly favored section—for example, Massachusetts—is not indi-

cated by the learned writer. It is comforting to be thus assured that our national development has not been merely a material one, but has, in spite of what may seem to be indications to the contrary, been equally a moral and intellectual progress. P. W. A.

A PROBLEM.

To the Editor of The Nation:

Sir: In an exceedingly interesting review of Ball's 'History of Mathematics,' the reviewer says (*Nation*, No. 1242, p. 330) that the question, "If the third of six be three, what will the fourth of twenty be?" is a simple problem, and that the answer is 7½.

On the contrary, the question is, as Ball calls it, absurd. The only proper answer is, that the fourth of 20 will remain 5, whatever ridiculous suppositions you make about the third of 6.

And if it be said that we must perform the same operation on 20 : 4 that we have performed on 6 : 3, we have not removed the difficulty, because 6 : 3 can be made to assume the value 3 in a variety of ways. The reviewer assumes that we either multiply the 6 by three halves, or the 3 by two thirds; and either of those operations applied to 20 : 4 gives us 7½. But 6 : 3 becomes equal to 3 when we add 3 to the 6. Add 3 to the 20 gives 23 : 4, equals 5¾. Or subtract 1 from the 3 gives 6 : 2=3; subtract 1 from 4 gives 20 : 3=6⅔. Or multiply the 6 by 4½ gives 27 : 3, = 9, the square root of which is 3. Multiply 20 by 4½ gives 90 : 4= 22.5, the square root of which is 4.743. There is no reason why 4.743, or 6.667, or 5.75, or either of forty other numbers, is not as good an answer as 7.5, the reviewer's answer.

Thomas Hill.

[Whether, in any given case, it is worth while to make an absurd supposition or not, is a question depending upon circumstances. What follows, according to the legitimate principles of logical reasoning from a given supposition, is always a proper question, with the propriety of which the absurdity or foolishness or insanity of the supposition has nothing to do. Stated formally, the hypothetical proposition, "If A is B, then C is D" may be perfectly true, although the supposition that A is B may be ridiculous, foolish, insane, absurd, or worthy of any other epithet you may choose to apply to it. Dr. Hill says "the fourth of 20 will remain 5, whatever ridiculous suppositions you make about the third of 6." Undoubtedly; but so will the third of 6 remain 2, whatever ridiculous suppositions you make with regard to it. Dr. Hill entirely mistakes the logical meaning of the question, and falls into the very trap which the old arithmeticians set for him.

Stated more fully and clearly, the question is this: If we absurdly suppose that the third of 6 is 3, what is the proportionate absurdity we must make in regard to the fourth of 20? The proper solution of the problem, stated in the form of the "rule of three," is as follows· As 2, the true third of 6, is to 3, the absurdly supposed third, so is 5, the true fourth of 20, to x. Taking the product of the extremes, $2x$, and equating it to the product of the means, 15, we have the equation $2x=15$, or $x=7\frac{1}{2}$, the proper answer. By reasoning wholly analogous, the answer to Tartaglia's question can be shown to be 15, as the reviewer stated.

The rest of Dr. Hill's letter seems to us wholly irrelevant, and to require no remark. —Ed. Nation.]

TAPSALTEERIE AND *TOPSYTURVY*.

To the Editor of The Nation:

Sir: "A. I.," in No. 1240 of your journal, calls attention to the poet Burns's *tapsalteerie*, "a word on which," as he humorously remarks, "the Scottish dictionaries throw a good deal of darkness." The passage he quotes for it, with two others in which Burns has the expression, are also adduced in a letter I have received from "A. A. T." of Washington City. At the time I discussed *topsyturvy*, none of those passages was present to my memory, nor had I access to the etymological vagaries of the Scotch lexicographer, Dr. Jamieson.

The editor of the great 'English Dictionary' now in course of publication, Dr. Murray, on my consulting him with reference to *tapsalteerie*, has obligingly sent me some notes, the substance of which it seems desirable that I should communicate.

In his native county, Roxburghshire, for one district of Scotland, *topsieteerie* is a term well known, while *tapsieteerie* is current in other parts of the country. These he regards as merely dialectal forms of *topsyturvy*. His mention of *tapsieteerie* is an addition to our previous knowledge; and Burns's *tapsalteerie*, he says, is generally considered as a whimsical substitute for it, on the assumption that *taps*, "tops," and *al*, "all," were among its original elements. The terminal *teerie*, he surmises, may have been corrupted, through *turrie*, from *turvy*, by dropping *v* after *r*, as in *ser*, for *serve*.

It does not appear to have been shown that Scotch literature, between 1623, when Lithgow used *topsoltiria*, and the days of Burns, with his *tapsalteerie*, reveals any variant of *topsyturvy* containing the syllable *ol* or *al*. That a historical connexion between the two forms may be discovered is possible. It is possible, too, as I have already suggested, that typographical error was responsible for more or less of *topsoltiria*, which, had I known of *tapsalteerie*, I should not have proposed, as I did, to trace, in part, to the Italian *sotterra*.

Your obedient servant, F. H.

Marlesford, England, April 20, 1889.

FROM RUSSIAN INTO FRENCH.

To the Editor of The Nation:

Sir: There seems to be an impression prevalent that the French translations from the Russian are more trustworthy, and better represent the originals, than those made into English directly from the Russian. The French translations that I have examined are illustrative of one great theory of "the art," namely, that a translation should reproduce not the style but the general content of the original, as opposed to the counter theory that the form and style should be reproduced as faithfully as possible. In translating Count Tolstoi's works, for instance, the latter theory leads necessarily to a certain baldness. The Russian author says *on pashól*, "he went (off)"; the Frenchman translates it or expands it into "Après avoir exhalé sa colère, il s'en fut chez lui"—which is picturesque, but does not represent the original. That is a very characteristic mode of treatment. But in the case of an author like Count Tolstoi it seems to me due his greatness to reproduce him in all his rugged strength, even with his invented words and his favorite polyglot.

A more serious case of the French gratuitousness in dealing with Count Tolstoi is to be found in M. Michel Délines's 'La Physiologie de la Guerre' (known in English as 'Napoleon and the Russian Campaign'). This example is as follows:

"Ils partaient sans se rendre compte de ce qu'il y avait de grandiose dans le spectacle de cette vaste et riche capitale abandonnée par ses habitants, et livrée ainsi en victime aux flammes, car une grande ville construite en bois et désertée par ses habitants était fatalement destinée à brûler."

The original, literally translated, is this:

"They [*zhíteli*, the inhabitants] drove away, and thought not of the majestic significance of this vast, rich capital, abandoned by its inhabitants and evidently to be burned (not to plunder, nor to set fire to empty houses, is not in the nature [soul] of the Russian people)."

That the vast rich capital was *constructed of wood*, and that it was destined by fate to be burned because it was abandoned by its inhabitants, is an example of the Frenchman gilding gold. That my criticism may be free from all appearance of disingenuousness, I will add, however, that the idea conveyed by or into the sentence quoted from M. Délines's translation is found later on in chapter vii of the same work ('War and Peace,' vol. iii, part 3, chapter xxvi, *ad finem*), where it is declared that "a city built of wood" (*derevyánnui górod*) and occupied by an enemy careless of fire could not help burning. But Count Tolstoi delights in paradox, and there is no reason why a translator should try to reconcile apparent or actual contradictions.—I am, etc.,

Nathan Haskell Dole.

Hedgecote, Jamaica Plain, April 29, 1889.

Notes.

D. Appleton & Co. will shortly publish 'The Ice Age of North America, and its Bearings on the Antiquity of Man,' by Prof. G. Frederick Wright, with ample photographic illustrations; 'Days Out of Doors,' by Dr. Charles C. Abbott; 'In the Wire Grass,' a novel by Louis Pendleton, and 'Luce,' a romance by Paul Lindau.

J. B. Lippincott Co. issue directly the first volume of the 'Cyclopædia of the Diseases of Children,' edited by Dr. John M. Keating, and 'Laramie; or, the Queen of Bedlam,' by Capt. Charles King.

The Long Island Historical Society will soon print, for subscribers, about one hundred and fifty unpublished letters of Washington, from its manuscript collections, in a large and handsome octavo volume, entitled 'George Washington and Mount Vernon.' It will contain a portrait of Washington, not heretofore engraved, from an original painting by Charles Peale (1787), owned by the Rev. Mason Gallagher of Brooklyn; also a portrait of Betty Lewis, Washington's only sister. The historical introduction and annotations will be prepared by Mr. Moncure Daniel Conway, biographer of Edmund Randolph. The collection is said to possess uncommon interest, abounding in curious and characteristic personal details, and conveying a very realistic conception of Washington as a master, a neighbor, a husbandman—a man concerned with minutest details of private affairs at a period (1793-1799) when his public action affected the interests of the world.

The Palestine Exploration Society announces that Mr. Guy le Strange's work on 'Palestine according to the Arabic Geographers' is completed in manuscript, and will be published in the autumn.

We duly announced the appearance of the enlarged edition of Prof. Villari's classical work on the life and times of Savonarola, and we have now the pleasure of recording its appearance in an English dress at the hands of Signora Villari (Scribner & Welford). The book is too generally known as the most complete and satisfactory account of the Florentine prophet, and of the exceedingly complex conditions which gave occasion to his extraordinary career and caused his martyrdom, to require more than the statement that it is now accessible to English readers in a faithful and fluent version. Necessarily the appendices of documents which gave to the original edition an especial value for students, are absent, but the volumes are enriched with a new preface, dated February 10, 1889, in which the author defends himself temperately and forcibly from some recent criticisms on the view which he has taken of Savonarola's position and of Machiavelli's opinions concerning him. Prof. Villari's intimate familiarity with all the sources of Florentine history in the fifteenth century is too absolute for his positions to be successfully impugned. A number of appropriate illustrations are scattered through the volumes, the most interesting of which is a facsimile of Savonarola's autograph abstract of his sermon of February 27, 1491.

Prof. Alessandro d'Ancona of the University of Pisa, well known for his studies in folk-lore as well as in history, has just published an excellent edition of the 'Journal du Voyage' of Montaigne, under the title of 'L'Italia alla fine del Secolo XVI.; giornale del viaggio di Michele de Montaigne in Italia nel 1580 e 1581' (Città di Castello: S. Lapi, 1889). The text is printed as originally written, partly in French and partly in Italian, and is illustrated with copious notes, which are of great importance. There is appended to the book a *catalogue raisonné* of the travels in Italy, and descriptions of Italian customs in foreign languages, down to the year 1815. Although it is not perfect, it is by far the best bibliography of Italian travels that exists.

The book of Marcellin Pellet, 'Napoléon a l'île d'Elbe,' which was noticed in the *Nation*, No. 1231, is confirmed in most of its facts by another book, drawn from different sources, 'Napoleone all' isola d'Elba' (Milan: Fratelli Treves), by Giovanni Livi, now Director of the State Archives at Brescia. This author lays great stress on the Italian intrigues and plots to persuade Napoleon to devote himself to the Italian cause and unify Italy, by allowing himself to be proclaimed Emperor of the Romans and King of Italy. These overtures were still toyed with by Napoleon when the state of France showed him that his return thither was possible, and his decision was hastened by the discussions at the Congress of Vienna.

The republication of O'Meara's book on Napoleon at St. Helena naturally revives the old discussion about Sir Hudson Lowe. It may be remarked that the popular opinion adverse to that person is fully confirmed by the official reports of Baron Stürmer, the Commissary at St. Helena of the Austrian Government, which were published at Vienna in 1886 by H. Schlitter. A French translation by Jacques St.-Cère, has been published at Paris, at the Librairie Illustrée; but, with a carelessness which is growing with French publishers, the book has no indication of the date of its publication. Further confirmation can be found in the Reports of the Russian Commissary, Count Balmain, which were published in 1867 in Bartenieff's historical journal, the *Russkii Arkhiv*, in the original French, and which we believe have never been reprinted, so that they are practically inaccessible outside of Russia. The Reports of the Marquis de Montchenu, the French Commissary, would probably also prove interesting; and it is to be hoped that some one will take the trouble to edit and print them.

'The History of Preaching,' by the late John Ker, D.D. (Armstrongs), is made up of selections from the lectures of the author, delivered as Professor in the Theological Seminary of the United Presbyterian Church of Scotland. Something more than half the book is given to the German pulpit since the Reformation, and this is its most valuable part, the remainder being devoted to a rather unsatisfactory account of preaching in the Jewish Church, in New Testament times, in the Oriental Church, and in the Western Church down to the sixteenth century, and to the many "lessons" which it behooved the Professor's hearers to draw from the history. Dr. Ker was a leading preacher of his day, and these lectures show him to have been a man of broad, if somewhat old-fashioned, learning. There is an abundance of shrewd comment to be found in his pages, as witness the following remark about Chrysostom: "He was envied by many of his fellows on account of his popularity, and disliked by them because of his secluded life and reserved manner. The people do not feel this fault; fellow-ministers do. If a popular preacher is to be liked by his brethren, he must be very frank and human."

The readers of 'Pleasant Hours in Sunny Lands' (Boston: Cupples & Hurd), by I. N. Lewis, A.M., LL.B., will heartily agree with the author in his feeling "that too little care has been taken in relating" the incidents of his tour around the world. Two sentences will be sufficient for examples of his style. The Chinamen "are amusingly peculiar in tone and inflection, and you must keep out of sight, as from a frog-pond, when curiosity or amusement leads one to draw near, if you wish to listen to a genuine colloquy, and to which, in fact, it bears closer resemblance than anything else I can imagine." The flat-boats "are full of merchandise from these rich fields, but like a trio on our city sidewalks, if you wish very much to hasten, the slimness of the man or the breadth of his two female companions hardly afford the necessary patience for a stoppage in transitu." We are not sure, however, that the publishers are not more to blame than the author for permitting so many imperfect and unmeaning sentences to pass uncorrected. Some of the illustrations are interesting reproductions of photographs.

The eleventh instalment of 'Stieler's Hand-Atlas,' now in process of publication in a new edition (Gotha: Perthes; New York: Westermann), introduces Africa with a first sheet, and the United States with a fourth. The Dark Continent has for some time been the cartographer's most interesting domain, and the rapid development of the Congo State is furnishing daily fresh knowledge of the great inland water-courses, forests, and populations. Any new African map having the authority and the excellence of Perthes's will be eagerly welcomed.

Mr. Henry F. Waters's "Genealogical Gleanings in England," in the April number of the *New England Historical and Genealogical Register*, deals with English wills of Way, Wyman, Archdale, Shrimpton, Yeamans, and other New England and Virginia families. There is a list (one of a series) of alumni of the University of Pennsylvania who have held official positions; another, by Judge Richardson, of Harvard alumni who have received honorary degrees as named. For the rest there is the usual variety in this issue of the oldest and best of genealogical periodicals.

We read in the newly published Proceedings of the Wisconsin Historical Society that its bound newspaper files number 5,557 volumes, and are surpassed in extent only by those of the National Library at Washington. A long list is given of the early files of papers published in Holland, Great Britain, and this country from 1650 down to 1799, nearly complete as far as they go. They are a rich quarry for historical students. The pamphlet concludes with a monograph on the "Fur Trade of Wisconsin," by Frederick J. Turner.

We have received also the Proceedings of the Davenport (Iowa) Academy of Natural Sciences, containing, besides a variety of scientific papers, a memorial of the late Prof. David S. Sheldon, whose portrait serves as a frontispiece. Dr. Frederick Starr embodies the observations of some thirty-five correspondents in a diary of Iowa thunderstorms for 1887.

Paris Illustré for May 4 (International News Co.) is a capital Exposition number, showing photographically the wonders of the Eiffel Tower, the interior of Machinery Hall, and samples of the interesting group of dwellings, of all times and nations, which measure the adaptation of man to his environment in the successive stages of his civilization. Add portraits of M. Eiffel and of M. Berger, one of the directors. The account of M. Eiffel's previous career as an engineer is very instructive.

A very agreeable account of the brief career of Eugène Renduel, the great publisher who gave his imprint to the chief lights of the Romantic school of French writers, forms the leading article in *Le Livre* for February. We say brief because, after ten years of this distinction, his health compelled him to retreat to the country, and shortly to make a definitive choice between his old calling and a purely rural, outdoor life, which meant practical oblivion until he passed away some thirty years after. The determination, we feel, was a happy one for him. Two portraits of this amiable and able man accompany M. Adolphe Jullien's paper. M. Jullien is in turn depicted in the April number, in connection with a very just eulogy of his recent works on Wagner and Berlioz; his effective use of contemporary caricature to illustrate his narrative being the main thought of the paper by M. Francis Rénier, who introduces several examples of this authentic kind of portraiture from the musical biographies in question. Alexander Dumas, who, with George Sand, Mérimée, and Janin, was one of the signal absentees from Renduel's list of authors, is celebrated in the May number on a side little known, to foreigners at least. M. Charles Glinel presents a nearly exhaustive list of Dumas's poetic performances, and in several instances prints the verses themselves for the first time. The quantity of all this is more surprising than the quality. Some imitations from Pushkin are interesting on account of the African blood which tinged both Dumas and the great Russian poet.

We read in *Le Livre* that in August next the *Journal des Débats* will celebrate its centenary in a volume reviewing its past, with the collaboration of such weighty names as the Duc d'Aumale, A. Dumas *fils*, Renan, Taine, Léon Say, Vogüé, John Lemoinne, Legouvé, Cherbuliez, Gréard, etc. Fine illustrations after Ingres, Delacroix, etc., will adorn the work, which will be issued by Plon.

The *Nuova Antologia* for March 16 contains an interesting article by D'Ancona on the popular songs of Piedmont, under the form of a review of the book by Costantino Nigra, 'I Canti popolari del Piemonte' (Turin: Loescher).

One may read in the Milan *Perseveranza* for April 1 a narrative of extraordinary interest by Prof. C. Magenta, describing the demonstration of his brilliant antiquarian deduction that a certain urn in the Certosa of Pavia, supposed to be a mere monolithic simulacrum, was the cunningly devised monkish hiding-place of the remains of the Duke Gian Galeazzo Visconti and Isabella of Valois. Both bodies were in fact found within, with fragments of clothing, etc., but entirely despoiled of all valuables such as were associated with them when in 1562 they were committed to the urn. Drawings were made of the Duke's skull, whose size and shape were notable and agreed well with the extant portraits. The skeleton showed his stature to have been not less than 1.80 metres (say 5 ft. 9 in.). The opening was made with due formality on April 2, and the remains were redeposited.

In the *Bollettino* of the National Central Library of Florence for April 15, it is stated that the Dante collection on which the library prides itself has been recently considerably augmented. To say nothing of his minor writings, the collection now embraces no fewer than 420 editions of the 'Divina Commedia.' Of these, 323 are in Italian, 33 in French, 31 in German, 10 in English, 9 in Latin, 5 in Dutch, and 9 in other tongues. A Swedish version of the first seven cantos of the "Inferno," and a Bohemian of the entire Comedy—the only complete one in that language—are among the latest accessions.

A circumstance well worth recording is the winning of two of the Boylston prizes for declamation at Harvard College last week by colored undergraduates, one of whom was first and the other fourth on the list. The competition took place, as usual, at the Sanders Theatre, in the presence of a large and interested audience, and the speaking was exceptionally good; and Clement Garnett Morgan and Edward Burghardt DuBois are conceded to have fairly won their honors. Mr. Morgan, who is uncompromisingly black, chose a passage from Carl Schurz on the Emancipation Proclamation, and rendered it in a manner to touch deeply those whose memories could bridge the chasm even of a single generation.

—At the close of the exercises attending the opening of the Johns Hopkins Hospital at Baltimore, President Gilman announced that a fund of $100,000 had been subscribed for the support of the University. This amount, together with the accumulated surplus still on hand, and the income which has not been cut off through the suspension of dividends by the Baltimore and Ohio Railroad, will suffice to carry on the University without contraction of its work for the next three years. This was the object of the subscription; the amount was subscribed chiefly in sums of $5,000, and almost entirely by Baltimoreans. It was raised very quietly, without special solicitation, and without any organized effort on the part of the University authorities; the names of the donors have not been published. Baltimore having thus stood in the breach, and secured the unimpaired efficiency of the Johns Hopkins University for the immediate future, it would be very gratifying if the friends of university education throughout the country would now take up the cause and permanently strengthen the foundation of the University. In addition to the completion of the $100,000 fund, President Gilman announced the gift of $20,000 by Mr. and Mrs. Lawrence Turnbull, to endow a lectureship of poetry, and an equal sum from Mr. Eugene Levering, to be used for building purposes. We have sufficiently expressed (*Nation*, December 10, 1888) our conviction that no better application of money to the service of the higher education could be found at the present time than in assisting the Johns Hopkins University, either by adding to its general fund or by endowing special departments or professorships.

—A memorial has lately been addressed to the Lord President of the Council and the Chancellor of the Exchequer by members of the Universities of Oxford and Cambridge, expressing a hope that measures may be taken for allowing selected candidates for teacherships in the elementary schools to spend the whole or part of their time of training at the Universities. No attempt was made to get a large number of signatures, but rather, as it would seem, that the names signed should be in some sort representative. Fifty-nine such names are subscribed to the memorial, all of which are those of heads of houses, professors, readers or lecturers, or fellows of colleges, save two—the names of the late and of the present head-master of Rugby. The memorialists say: "We are of opinion that such a mode of training would be free from defects which have been attributed to the present system, and that the body of teachers in elementary schools would gain by the admission of a portion of their number to a share in the life and traditions of the Universities."

—Doubtless this would be a very desirable thing; and doubtless, also, it may be accomplished in spite of many obvious difficulties. The question of residence, for instance, might be got over, as has been already suggested, by affiliating some of the present training-institutions with colleges in Oxford or Cambridge, and allowing two years' residence in them to count as one year at the University. This would greatly diminish expenses. The chief objection to the present system of training-colleges is that which has so often been brought against the theological schools—that not only is their range of teaching narrow, but they foster a narrow professional feeling in their scholars. Life in a great university might correct this. Another consideration which makes the proposed scheme desirable is, that the present training-colleges are largely denominational, being for the most part, though not entirely, in the hands of the Church of England. The influence of the Church of England is very great, perhaps predominant, at the Universities also; but the colleges are strictly undenominational (with a few exceptions), and, at any rate, there is a freer air at Oxford or Cambridge than there is in any training-school. Since the memorial spoken of above was presented, a general meeting of the Teachers' University Association has been held at Toynbee Hall in London, and the memorial was a subject of discussion. So far as appears from the reports, the meeting was entirely in its favor. The chief speaker was Prof. James Bryce, and he brought forward one argument for the scheme of which, we confess, we had never thought. "It was a great misfortune," he said, "that the university teachers could at present classify teachers who had not been to a university as if they belonged to a lower order: and it was highly desirable to make the teaching profession feel itself one and undivided, as was the case in the United States."

—Attention was directed some months ago to the manifest improvements in the manufacture of optical glass brought about by the researches of Prof. Abbe of Jena. The possible advantages in telescope construction were there hinted at, but they have only now been realized, through the painstaking investigation of Dr. Hastings of Yale University. In selecting from an extended series of the new German glasses, with widely varying optical properties, Dr. Hastings was hampered by the fact that a serious deterioration of the polished surfaces of many of these glasses will take place on ordinary atmospheric exposure. While this is not a practical limitation in making microscope objectives, it was necessary to regard it as such in the case of telescope objectives, where the larger and more costly lenses must be permanent, or their final cost will render them wholly impracticable. In the *American Journal of Science* for April, Dr. Hastings develops a general method for determining the secondary chromatic aberration for a double telescope objective, and describes a telescope newly made by himself and sensibly free from this defect. Selecting from the catalogue of the Abbe glasses two which appeared, from the inspection of their optical properties, to form a most advantageous combination, Dr. Hastings first made from them prisms, and redetermined their optical constants with great precision. With these data he found it possible to calculate an objective whose achromatism should be sensibly perfect.

—It remained to make such a telescope. This was necessary in order to afford practical demonstration of the value of the new combination, both in point of absence of the residuum of color always present in the ordinary telescope, and as to the expected gain in the defining power of the telescope. As a practical optician, Dr. Hastings had already much experience, having ground and figured several object glasses—among them one of 9.5 inches diameter now mounted at the Johns Hopkins University; and it is a matter of regret that disks of the new glass were not available of a nearly equivalent aperture, for the practical test. As it was, the largest objective which could be made from the pieces at his command was of 2¾ inches clear aperture, and these were accurately figured to the curvatures and thicknesses indicated by his computations. On beginning to observe, the most surprising feature was the astonishing beauty of the images in the new telescope. The fringe of purple light familiar to all users of telescopes was wholly wanting, and only a trace of it was found to exist, on imposing the conditions most suitable to its exhibition. The customary astronomical tests of its defining power were applied, with highly satisfactory results: objects which, in an ordinary telescope of equivalent aperture, require careful looking, appeared strikingly plain. Sundry other tests which need not be instanced here have been conducted by Dr. Hastings, and lead to the significant gain of nearly one-fourth in the effective capabilities of the new telescope over the achromatic objective of the usual construction. It may be expected that the difficulties in procuring large melts of the new glass will not prove insurmountable, and that the gain in the performance of large telescopes will be greater than Dr. Hastings has demonstrated it to be for small ones.

—The Geographical Bureau of the Home Department of the Japanese Government is doing for the people of Nippon what our Signal Service accomplishes for us. A fat bundle of pamphlet publications just received from Tokio shows that tri-daily telegraphic weather reports from the whole of the empire have been gathered since 1883. For many months past these have been published in the daily newspapers. The number of telegraphic reporting stations in Japan is thirty-one, and from these, together with five stations in Corea and China, with less

frequent exchanges from Manila in the Philippines and Vladivostok in Siberia, the reports are made up. Since the first published list of observations made in 1874, the climatological values obtained have become more and more exact. The apparatus used in the central observatory, which is situated at the highest point within the old castle in Tokio, is of the finest and most sensitive sort from Europe and the United States, supplemented by special instruments of native manufacture. Direct magnetic observations have been carried on for several years, with self-registering and other apparatus. The study of marine meteorology and that of seismic disturbances is also attended to. The official Government work is supplemented, with great popular benefit, by the Meteorological Society, which publishes a journal, of which we have received several copies. It has been found that the theories of meteorology which, in other parts of the world, have been supposed to be fixed principles of the science, are only of moderate value for the Japanese archipelago. The forecasts depend largely upon the skill of the superintendent, and are much more successful as relates to rain than to wind. Thus far about seventy per cent. of the predictions made in Tokio have been found to be correct. In addition to the value of the cautionary signals displayed from forty-nine stations, the results of the system of observations are frequently inquired for by architects, engineers, medical men, and surveyors. The director, Mr. J. Araii, is ably assisted by Mr. Ernest Knipping, a German gentleman whose writings, along with our own Prof. T. C. Mendenhall's, are of standard value. The monthly publications of the Central Observatory are amply supplied with maps and diagrams, with letter-press in English. The more popular *Meteorological Journal*, for local reading, now in its eighth year, is in Japanese.

—M. Jules Barbey d'Aurevilly, one of the last, or the very last, of the French romantic writers of the time of Théophile Gautier and his *gilet rouge*, has just died in Paris. The date of his birth is not exactly known, but it was some time between the years 1802 and 1808. He began to write in 1825, but all of his earlier works failed of success. In 1830 he disappeared, like Waring, and was unseen and unheard of for twenty years. In 1850 or 1851 he came to light again, and filled many columns of the *Pays*, in the course of the next few years, with sonorous and dithyrambic criticism, of the sort with which his time and his school have made the world familiar, and even weary. A dozen or more novels followed, of which, perhaps, the best known is 'L'Ensorcelée.' It is not so much as a man of letters that he will be missed, but as a man of letters who was also a relic—a relic of romanticism, of dandyism, of a certain picturesque type of Catholicism and of aristocracy. His death is sure to set running a current of anecdote and reminiscence, much of which will doubtless be interesting reading. The stream, in fact, is already beginning to flow.

MOTLEY'S CORRESPONDENCE.

The Correspondence of John Lothrop Motley, D.C.L. Edited by George William Curtis. With portrait. 2 vols. Harper & Bros. 1889.

The correspondence of an illustrious man, printed often more because of his reputation won in some one field than for the interest of the letters in themselves, is an unfair test of his intellectual ability or social attractiveness; and in the case of an historian in whose work the telling mental qualities are largely different from those which give vivacity and brilliancy to impromptu letters, this test works with special incompleteness. Motley certainly, in addressing his wife, children, and a few intimate friends, did not write for immortality. He had not the point in style, the variety in interests, the copiousness of opinions which give charm and body to a collection of personal letters; and, although he mingled in the society of famous men and fine women, and was near to great events, he had not that quickness of eye and literary power of brief description which could have painted the historical scene before him in a picturesque and enlivening manner. His methods of conceiving history were alien to such a task; he required a large canvas and heroic figures, and something of the breadth that goes with the spectacular, before he could deploy his mind and imagination. And, besides, there was so considerable a moral element in his enthusiasms, a sense of the forces of history so deeply underlying his serious work, that he was to a certain extent disarmed and taken at a disadvantage in the presence of the personal, the immediate and fragmentary character of passing and incomplete events. These two volumes, consequently, notwithstanding their real interest in many ways, are a disappointment, if any one looks in them for more than illustrations and fuller knowledge of the man's character as it was in daily and private life; but if one is content to look for no more than this, they afford the portrait of an American whom his fellow-countrymen will be more proud to acknowledge after their perusal —one who did honor to his country by his personal bearing among men, by his living and thinking in ordinary ways, quite as much as by his literary fame.

He belongs distinctly to a type that is passing away, or at least is suffering such changes outwardly and inwardly as to be taking on a new form. He was one of the Boston boys when Boston was more preëminently a commercial town, with all that means on the social side of life. He was educated at Bancroft's Northampton school and at Harvard College, and at an early age went to Europe for legal study at German universities and for travel, and of all these opportunities he made a serious use. The first stirring of his historical imagination and the beginning of his fluent and ample style may readily be discerned in his pleasant letters home, which are what such letters from such a youth should be, but have only autobiographical value. The trial of his talents in novel-writing, and the reasons why he selected the Netherlands as the scene of his historical labors, are not touched upon in these letters, and it may be said that the collection suffers from the lack of continuity in the series, both here and in later life. After his departure for Europe, however, there is sufficient material for the reader to make out plainly and fully the quiet student life he led, the absorption of his mind in his work, and the visitings of doubt and melancholy which must attack a solitary scholar before the recognition of his powers by others, in judgment upon definite work already accomplished, gives him confidence in himself. The publication of his first volumes, from which he apparently did not hope for success, settled his position as an author to be widely and seriously regarded, and he set to work to continue the series with a renewed energy which shows how much he was invigorated by the warm applause he had received. Of his labors in the workshop, however, the letters afford the very slightest glimpses—they are singularly free from the burden of his daily tasks, and, while we might desire to see more of the student at his desk, the fear of egotism seems to have haunted him to such a degree that he spoke of himself and his doings, even to his wife, with an uneasy consciousness, and was always glad to drop the subject. His occasional separation from his family and his long absence from home required him, nevertheless, to give some account of his days, and to this necessity the correspondence is mainly due.

The more entertaining chapters are naturally those which detail, almost like a diary of dinner engagements, his association with leading persons in England, and, more narrowly, upon the Continent. In London society he was received with great cordiality from many, and with courtesy and distinction from all. What was his charm it is impossible to discover from his own account of the matter, and others have not told us; but he must have been singularly agreeable to have won and kept the consideration of the circle in which he moved. He was interested first of all in the eminent literary men and statesmen of the day, and in the group which was noted for kindly disposition to Americans. His portraits of these people lack condensation and vividness; he was better at describing a character than a personality, and consequently he has not written anything of them specially remarkable. It is rather the tone in which he speaks than the words he uses which exhibits their impression on him, and this is necessarily diffused and unquotable. No man is more agreeably presented than the aged Lord Lyndhurst, who at the time of the war wrote to him as a fellow-countryman, remembering his birth on American soil; but this characterization is not made in any one passage. Mrs. Norton, too, and Lady William Russell are similarly a part of the pleasure which the letters give, as a picture of humane and hospitable English life, but they are mingled with the various scenes. Of others of more public note, Thackeray, Macaulay, Brougham, Palmerston, Milman, Hallam, the books are already so full that these slight reminiscences of them are neither fresh nor informing. Thackeray appears as "a colossal infant—smooth, white, shiny ringlety hair (flaxen, alas, with advancing years), a roundish face, with a little dab of a nose upon which it is a perpetual wonder how he keeps his spectacles, a sweet, but rather piping voice, with something of a childish treble about it, and a very tall, slightly stooping figure," and without any distinction in his talk more than in his white choker. Macaulay is a sick man, whenever seen, with the cough which foreboded the end, a blank face, and "as it were badly lighted," nothing luminous in his eyes nor impressive in his brows, a spacious forehead "scooped entirely away in the region where benevolence ought to be, while beyond rise reverence, firmness, and self-esteem like Alps on Alps," while the eyes beneath are almost closed with swollen lids. Motley, who did not wish to talk, did not find him too much an autocrat of the conversation. Brougham, with snow-white and shiny hair, a knobby and bumpy head, furrowed with age, and a vast mouth, is principally remembered by this observer for his incredible nose, which he wagged like an elephant's proboscis. These, however, are all familiar features, and even "Dizzy," as Mrs. Norton describes him, "with a black velvet coat lined with satin, purple trousers with a gold band running down the outside seam, a scarlet waistcoat, long lace ruffles falling down to the tips of his fingers, white gloves with several brilliant rings outside them, and long black ringlets rippling down his shoulders," would not be strange except for the impossibility that the eye labors under in endeavoring to retain his youthful figure as a

thing to be believed in. Of more interest is the sketch of Maximilian just before his departure to Mexico: "About thirty, with an adventurous disposition, some imagination, a turn for poetry," an author "not without talent," who "relieves his prose jog-trot by breaking into a canter of poetry; an adorer of bullfights, who half regrets the Inquisition, and considers the Duke of Alva everything noble and chivalrous, and the most-abused of men." The Comte de Paris is better treated—"a model of what a young prince ought to be in manner, in character, in conversation, in accomplishments. To be sure, he bribed me by his unaffected, sincere, and enthusiastic interest in my country; a more loyal and ardent *American* does not exist than this King's son." Other royal personages are to be seen on the page, always through republican eyes, and usually not to their advantage, except in the case of the frank and straightforward King of Holland and his refined and womanly Queen, always the unassuming friend of the best within her horizon.

To his countrymen, however, the most welcome part of these volumes is not what they tell of the great ones of the earth, or of the social grace and hospitableness of England in its highest circles; but rather the fulness and clearness with which they reveal the unspoiled American heart which, through long residence in foreign lands and in the midst of aristocratic fascinations, Motley kept beating in his breast. No word can now be breathed against his patriotism or his entire adhesion to and belief in the democracy of his own country. His sketch of Austrian society, in which birth alone gives station, might be expected to contain some comment from one whose chief claim to attention was not diplomacy but literature. He could not be flattered, he says, to be received as a diplomatist when he could not be as a man. In his reflections upon English aristocracy he is not less loyal to the traditions in which he was bred. He acknowledged himself to be a spectator in London, and had no desire to be "one of themselves." After stating the committal of America absolutely to the future of democracy, he goes on to say:

"For me, I like democracy. I don't say it is pretty or genteel or jolly. But it has a reason for existing, and is a fact in America, and is founded in the immutable principle of reason and justice. Aristocracy certainly presents more brilliant social phenomena, more luxurious social enjoyments. Such a system is very cheerful for a few thousand select specimens out of a few hundred millions of the human race. It has been my lot and yours to see how much splendor, how much intellectual and physical refinement, how much enjoyment of the highest character has been created by the English aristocracy; but what a price is paid for it. Think of a human being working all day long, from six in the morning to seven at night, for fifteen or twenty kreutzers a day in Moravia or Bohemia, Ireland or Yorkshire, for forty or fifty years, to die in the workhouse at last! This is the lot of the great majority all over Europe; and yet they are of the same flesh and blood, the *natural* equals in every way of the Howards and Stanleys, Esterhazys and Liechtensteins."

And again he says:

"I don't think there is any danger of my losing my American feelings and my Republican tastes, and I trust I can look on these scenes of exquisite and intelligent luxury objectively, as the Germans say, without confounding the characters of spectator and actor. . . . Much as I can appreciate and enjoy æsthetically, sentimentally, and sensuously the infinite charm, refinement, and grace of English life, especially country life, yet I feel too keenly what a fearful price is paid by the English people in order that this splendid aristocracy, with their parks and castles, and shootings and fishings and fox-huntings, their stately and unlimited hospitality, their lettered ease and learned leisure, may grow fat, ever to be in danger of finding my judgment corrupted by it. At the same time it is as well not to indulge too long and too copiously in the Circean draughts of English hospitality."

Doubtless he was fortified in his patriotism by the intense passion aroused by the civil war. In all he has to say of that conflict (and he has very much to say) there is the touch of a burning enthusiasm, of an overflowing interest, of personal anxiety and hope, of a home-felt share in the defeats and triumphs of the country's cause. He had the misfortune to differ from his father upon these topics, and he did not permit himself to speak of them to him; but in his letters to other members of the family he gave full expression to his feelings. He perceived with great definiteness the lines of the conflict, and especially the contest of moral forces and the issues of civilization involved in them. In devoting his life to the story of liberty in the Netherlands he had gone to school at the fountain; and he was so grounded in the love of the ideas the national cause stood for, as well as in the affection for his own country which life abroad in his case could only intensify, that he was bound, as by a natural law, to throw himself heart and soul into the Northern cause. He was able in consequence to state the question so clearly and forcibly in England as to do great service there, before he returned to this country to be near the scene of affairs; and after his appointment to Vienna he kept in close connection with that body of Englishmen who, with Bright and Mill at their head, befriended our interests.

The episode of his return home in 1861 is one of the capital chapters in the volumes. He represents the scene, the feelings, the confusion of the time, as a part thereof; and, whether at Boston or Washington, his pulse tells the beat of the hour. The optimism of the nation at its first awakening is reproduced in him with almost amusing completeness; and throughout the war the readiness with which he recoiled from the depression of defeat, and the vigor of his faith in our triumph, are attractive traits of his character. The anecdote of his finding himself in so oppressive a solitude when he received the news of the fall of Vicksburg is pathetic; he "screeched it through the keyhole" to his daughter; but "you," he says, addressing Dr. Holmes, "who were among people grim and self-contained usually—who, I *trust*, were *falling* on each other's necks in the public streets, and shouting with tears in their eyes and triumph in their hearts—can picture my isolation." This is the contemporary life of those years still warm on the page; and many of these pages are dedicated to the joys and sorrows, public and private, of the time, in a way to deepen regret in our minds at the memory of the unmerited trials which so true an American heart suffered at the hands of our national Government.

His estimate of the men of the war is also a close rendering of contemporary feeling, especially with regard to the military hope of the hour, Scott or McClellan or Grant. The most interesting of these, however, is the impression he obtained of Lincoln, whom he saw only for a short hour at the opening of the fight. He was struck at once by the substantial characteristics of the President, and, in his case, this was notable; there is nowhere any wonder expressed that a "backwoodsman" had come to so responsible a place, but only gratitude that an honest and true man was at the helm. He writes of him as early as June, 1862, with noticeable accuracy: "I think Mr. Lincoln embodies singularly well the healthy American mind. He revolts at extreme measures, and moves in a steady way to the necessary end. He reads the signs of the times, and will never go faster than the people at his back. So his slowness seems sometimes like hesitation; but I have not a doubt that when the people wills it, he will declare that will." And after the assassination, recurring to his first impression of Lincoln, he writes: "He seemed to have a window in his breast. There was something almost childlike in his absence of guile and affectation of any kind. Of course, on the few occasions when I had the privilege of conversing with him, it was impossible for me to pretend to form an estimate as to his intellectual power, but I was struck with his simple wisdom, his straightforward, unsophisticated common sense. What our republic, what the whole world, has to be grateful for, is that God has endowed our chief magistrate, at such a momentous period of history, with so lofty a moral nature and with so loving and forgiving a disposition." Perhaps in all these few lines of encomium which from time to time he writes upon the leading figures of the war, we may discern the hero-loving imagination working before the facts were accomplished; but it was Motley's good fortune to have nourished his mind with contemplation of such men in the great struggle of the Netherlands, and he was thus in a position more readily to appreciate them.

It remains to say a word about Motley's friendship with Bismarck, which is a leading topic in the volumes. They were college friends, or even schoolboys, together, and the tie which bound them was this early one cherished through years by both of them. They recognized the vast difference in their political creeds, but they also agreed that the condition of affairs in Prussia and America differed as widely as their views, and their friendship fortunately was so purely personal that opinion did not enter into it as any part of the cement. Bismarck's letters are almost boyish, or old-boyish, in spirit, and are half rollicking. They show the Chancellor out of his gravity; but this is only to see him more near. The accounts which Motley furnishes of the household arrangements and private habits of the Bismarcks fill out the picture; and if there is something of the German country baron and of squirearchy in them, this is the homeliness of truth. Bismarck appears in a more amiable and noble light; his sincerity is much dwelt upon, his force and grasp are rather indicated than shown, but the conversation died on the air that heard it. The most valuable passage is the following:

"He said he used when younger to think himself a clever fellow enough, but now he was convinced that nobody had any control over events—that nobody was really powerful or great; and it made him laugh when he heard himself complimented as wise, foreseeing, and exercising great influence over the world. A man in the situation in which he had been placed was obliged, while outsiders, for example, were speculating whether to-morrow it would be rain or sunshine, to decide promptly, It will rain or it will be fine; and to act accordingly with all the forces at his command. If he guessed right, all the world said, What sagacity—what prophetic power! If wrong, all the old women would have beaten him with broomsticks. If he had learned nothing else, he said he had learned modesty."

It may be said generally—and it is pleasant to be able to say such a thing of a collection of private letters—that this correspondence presents every one whom it brings forward in a way to win regard for him and not to lessen it. The social reminiscences, bare as they often are, are pervaded by hospitable and kindly feelings, and the literary and political portions are without any disagreeable traits, but, on the contrary, show Motley's friendliness and

patriotism, and a readiness to take men at the best possible, which now honor his memory. It is, nevertheless, his own reputation that will be increased and endeared by these proofs of his devotion. His belief in his own people, his anxiety to serve them in places of honorable ambition or in private station, and his humane and sanguine temperament in the great conflict of his generation, his laboriousness in his studies, and his unaffected friendliness with many persons of intellect, refinement, and good-will, make us the more glad to know that he remains, after all his disappointments, to the last line of his pen unalienated from ourselves.

We have observed many misreadings in the text, which are so unusually numerous in a work of this kind that we here correct the more important. Vol. i: 35, Tieck's *Phantasus;* 127, canal *smells;* 169, *successively;* 182, *sixteenth* century; 190, l. 6 from foot, *reviewed?;* 274, marshalling *with* his baton; 355, déjà *lu;* 359, l. 5 from foot, *plant.* Vol. ii: 7, lieutenant-*colonel;* 268, *Laugel;* 313, "dynastische Ausbeutung" is translated *prejudices;* 315, "sonderbar" is translated *immoral;* 317, l. 3 from foot, *unconscionably;* 325, l. 8, *passion* malheureuse; 336, l. 20, *paternally;* 355, l. 6, *Thursday;* 399, l. 16, *alternation.* The index has noticeable defects, but we mention only the startling entry of the Boott Society, which turns out to be the Boston Saturday Club! Some of these errors appear to have resulted from the English manufacture of the book.

NATIVE LIFE IN INDIA.

Indian Life, Religious and Social. By John Campbell Oman. London: T. Fisher Unwin. 1889.

THE materials of which this little book is composed have not been brought together from remote or out-of-the-way sources. Nevertheless, there is a value attaching to them which, as a rule, is grievously wanting in learned and philosophic dissertations on the religion and philosophy of the Hindus. They consist of sketches, drawn direct from the life, of the manner in which the Hindu religion, as it exists to-day, affects, in his daily life, in his acts, and in his thoughts, the Hindu as he exists to-day. The treatment does not pretend to be systematic or exhaustive; but just as a sketch is, oftentimes, a great deal more suggestive than the finished picture, so is it here. These random side-lights thrown on the moral and social condition of the people of India disclose in a very striking way that moral and intellectual helplessness which caused them to succumb, and keeps them in subjection to a handful of alien conquerors.

If we take an average Englishman and contrast him with an average Indian, there is no such difference between the two as to account for their relative positions. The Indian possesses, perhaps, the quicker and more agile intellect of the two. He is, man for man, not less brave, not less diligent in his vocation, not less quick in the acquisition of knowledge. Whence, then, comes the unquestionable superiority of the man of the Western world? It comes, we should say, from his interpretation of life and the world taken as a whole. All Englishmen, no matter how they might classify themselves in a religious census, are practically of one faith in this respect—that they regard Man and Nature as subject to an order intended for the use and advantage of reasonable creatures. Hence, except in cases when the sense of self-interest throws his mind into a state of torpor, the Englishman cannot rest content with a state of things which shocks or baffles his reason. This logical curiosity to get at the reason of a thing is the spring and motive power of all which the Western world vaguely describes as "progress." It is just this reasonable interpretation of the universe which is wholly absent from the moral and intellectual conceptions of the native of India. The universe, in his eyes, is literally a region of Chaos and old Night, regarding the activities of which it is impossible to predicate anything with certainty. The invisible world is peopled by countless myriads of lawless and capricious beings, who can be bribed or otherwise compelled to put their supernatural powers to unjust and malicious uses as readily as a corrupt and underpaid state official.

Unity and continuousness of purpose are not to be expected from a people under the domination of such a belief as this. Living in a world thus thickly beset with hidden dangers, the Hindu feels that his only chance of safety is to go on for ever doing the thing which he, his father, his grandfather, and all their fathers before them have been accustomed to do. "Custom" is the authority to which all men bow. They have sacred books, as all the world knows, but as the power of reading and interpreting these is practically extinct throughout India, except in two or three places of learning, there exists no standard of "custom." The number of castes, for example, was originally four; at present they certainly number not less than four thousand, and probably more; and the amount continues to increase because any little section of men who follow a trade in common, or who have a common way of propitiating the gods, or who eat together, become, after a brief persistence in the practice, a new and distinct caste. There being no passage from one caste to another, it follows that this rapid multiplication of castes splits up the community into a multitude of little organisms, each possessing its own separate principle of life, and walled off, so to speak, from every other. Practically, the first and greatest duty of the Hindu is to preserve his caste. He cannot evade this obligation even when he has lost all faith in the reality of caste, for a Hindu who has lost his caste becomes an out-caste in the true etymological sense of the word. No one, either of his own or any other caste, can give or sell him food; no one can receive him into his house; no one, either parents, wife, or children, can hold any intercourse with him unless they, too, are prepared to become outcasted in consequence. And the preservation of caste means perfect submission to whatever is customary, no matter how gross, monstrous, and irrational it may be. The words which Shakspere has put into the mouth of *Coriolanus* are exactly descriptive of the intellectual and moral anarchy in which this slavish reverence for custom has landed the Hindus:

> "What custom wills, in all things did we do 't,
> The dust on antique time would lie unswept,
> And mountainous error be too highly heap'd,
> For truth to overpeer."

Here, by way of illustration, is a "specimen" from these mountains of error taken from Mr. Oman's pages:

"During an excessively dry summer, as I was sitting one evening in the open air, the clouds began gathering rapidly overhead. Every one was anxiously looking out for rain. The sultry heat had caused an outbreak of sickness, and the price of food had gone up considerably. I remarked to a native standing beside me that we would now in all probability have the much desired rain. He looked up towards the dark, overcast sky above, and then, shaking his head doubtfully, expressed his fear that the rascally *bunniahs*—vendors of food, grains, and other articles of consumption—would not let it rain. This idea was a new one to me. I was familiar with the old Hindu notion that the dark clouds are malicious demons who obstruct or intercept the rainfall, and are only overcome by Indra's flashing thunderbolts, which rend them asunder in the interests of the human race and the parched and gaping earth. But I had never heard that the bunniahs were credited with meteorological powers of so very important a character. I pressed the man to explain his remark. 'Don't you know,' he said, 'that it is to the interest of the bunniahs that the prices of all articles of consumption should be as high as possible, and that rain should not fall. Well, to attain their object, they make cakes of wheat flour and other things, and then deliberately deal with these heaven-sent gifts in such a manner as to offend the gods and make them withhold the rain.'"

The Hindu conception of Nature is, in short, the exact antithesis of that which is regarded as axiomatic by the Western world. Not only do the ideas of uniformity, persistence, unvarying succession of cause and effect find no place in it, but Nature is looked upon as in all its operations guided by an unpredictable caprice. And what is supposed to be true of Nature is no less true of Man. In the absence of any authoritative standard of belief and conduct, it is impossible to exaggerate the wild chaos of beliefs which possesses the population of India. These eccentricities would rapidly degenerate into practices of unspeakable atrocity and sensuality but for the strong restraining hands of the British Government. Only a few months ago a man was tried for the murder of his wife. It was proved at the trial that he had, with the consent of his victim, and in the presence of his fellow-villagers—the local police assisting at the ceremony—gouged out the eyes of the wretched woman on the strength of a dream which assured him that if he did so the eyes would be replaced by eyes of pure gold. These crazy superstitions, combined with the benumbing effect of caste restrictions, appear to have destroyed, at least for the time, the power of sustained and coherent thought in the Hindu mind. It is altogether lacking in initiative and originality, as is clearly seen in the efforts of the "educated classes" (so called) to provide themselves with a religion in lieu of that which their English education has destroyed.

The academical feebleness and languor of these endeavors is, perhaps, the most distressing symptom of the present condition of India. Mr. Oman has devoted two or three of his best chapters to an account of some of these, and clearly perceives their unreality and uselessness. The educated Hindu has learned, in his college days, that it is a bad thing for a nation to break with its historic past—that religious reformations are effected, not by a fundamental change of creed, but by going back to the primitive sources of national faith—and, on the strength of these propositions, tries to bring about a religious revival by affecting to believe in the divine inspiration of the Vedas. It is all a make-believe—the very theory of inspiration being borrowed from missionary teaching—and, consequently, brings, and can bring, no fruit to perfection. In short, the reason of the Hindus, from long centuries of acquiescence in unreasoning superstition, has become so enervated that it cannot be roused resolutely to grapple with the mysteries of existence or the practical problems of conduct. All it aspires to do is to play with these questions—to store the memory with the opinions of Western thinkers, without caring to assimilate or digest them. So far as there is any movement of thought in British India, it is "all borrowed—all second-hand roar;" and while this state of things continues, and India is not assailed from without, British domination is in no danger of overthrow.

HARE'S AMERICAN CONSTITUTIONAL LAW.

American Constitutional Law. By J. I. Clark Hare, LL.D. In two volumes. Boston: Little, Brown & Co. 1889. Pp. lxxxi, 1,400.

JUDGE STORY'S treatise upon the Constitution of the United States, written more than fifty years ago, has now, in many parts of it, a remote and inadequate quality. Judge Cooley's excellent volume is concerned with "the constitutional limitations which rest upon the legislative power of *the States*." We have here, in Judge Hare's book upon 'American Constitutional Law,' a competent and worthy exposition, in the hundredth year of our national existence, of that body of legal doctrine to which the Constitution of the United States has given rise in the aspect which it presents to-day. It is a book of the first importance, dealing in a large way with great and difficult questions, yet careful, close of texture, and showing a keen discrimination.

It is divided into fifty-nine "lectures," for it embodies a course of lectures delivered at the Law School of the University of Pennsylvania; and it is a multiplication by four of that smaller volume, printed merely "for the use of the class" in 1885 and little known here, which has attracted such favorable attention from English critics like Dicey and Bryce. The key-note of the book is struck in the short preface, in which the author takes notice of "*the growth* of the Constitution of the United States," and adds, after adverting to the war and the questions which it raised:

"A vast and untravelled field was thus thrown open for critical examination and research, and years may pass before it is thoroughly explored. Under such circumstances the duty of a student of public law is both difficult and obvious. Jurisprudence is a science which must suffer unless pursued with a single eye to truth; and, while the decisions of a court of last resort are conclusive between the parties, they are also steps in the process by which an accurate conception of public and private law may ultimately be attained. A writer who passes them in review should therefore . . . not hesitate to state his own [opinions] and the grounds on which they have been formed. Should he err in such an endeavor, he may still hope that his mistakes will be corrected by abler thinkers, and may indirectly contribute to form the public opinion which, in the long run, guides legislators and courts."

We have, then, a treatise which recognizes in the Constitution of the United States an instrument adapted to the needs of a growing and developing nation, intended, as the author quotes Sir Edward Coke, "to live and take effect in all successions of ages." And it is a treatise which, in stating the adjudicated law, does not hesitate here and there to accompany it by searching criticism. Judge Hare is no mere stater of decisions. He perceives clearly the exact worth of judicial decisions, and so their frequent shortcoming and inadequacy; and his long experience upon the bench gives weight to all his comments. "The current of decision," he tells us, "sometimes varies like the tides, as every lawyer finds who relies on precedents."

Roughly, the book may be separated into eight parts, of which one deals with introductory and historical matter, another with provisions in the nature of a bill of rights, another with questions relating to jurisdiction and procedure, and others with the general topics of taxation, eminent domain, the regulation of commerce, war, and money. These are not altogether the divisions of the book itself, and they do not altogether follow this order. But a sufficiently accurate notion of the contents is got when it is said that something under a fifth of the work is given respectively to the first and third subjects in the above order, and about twice as much to the second; and that the rest, somewhat under a quarter of the book, is divided among the other titles; the first two of these being a little more fully dealt with than the others. The first part in the above division will interest not merely the lawyer, but any intelligent reader. The author is full in his treatment—a little too full, some may think; but he is always clear, agreeable, and instructive. It is the old story, but it is illustrated by many striking suggestions, as in the part where the writer points out that, a hundred years ago, the English had already in a sense made the acts of King, Lords, and Commons subject to the test of law, unless when they acted conjointly in making an act of Parliament; and "all that remained for the framers of the American Constitution was to render that which was true of the several parts of the English Government applicable to the Government of the United States as a whole." The essential character of our Revolution as being no revolution at all, but only the breaking of links with the old country, to the end that we might continue to live as before, is pointed out; and also the fact that our several States never had a recognized, separate national existence. The author gives life to his pages by the clear expression now and then of his opinions upon such topics as the views and personal qualities of Jefferson, the Chinese immigration, the condition of the civil service, and the ridiculous rules of our political parties which operate effectually to exclude from primary meetings the very salt of the organizations.

In considering the principal amendments to the Constitution, and those clauses in the body of the instrument relating to citizenship, the obligations of contracts, *ex-post-facto* laws and bills of attainder, which have been collectively called, sometimes, a bill of rights, Judge Hare gives a wide scope to their remedial and protecting efficacy. Far as the Supreme Court has gone in what it includes under the notion of a "contract" and a "law" which impairs it, Judge Hare would go further; and he also supports the wide conception of an *ex-post-facto* law and a bill of attainder which is given in Cummings vs. Missouri and *ex parte* Garland. On the other hand, he seems to adopt the restricted meaning of the privileges and immunities of a citizen of the United States given by the majority of the court in the Slaughter-house cases: "They include," he says, "whatever the Constitution expressly or impliedly confers, and nothing that it does not grant." Judge Hare, like Mr. Justice Miller, seems to give too wide a scope to the *decision* in the Dred Scott case. We take that to have been accurately given by two learned writers, since distinguished as Mr. Justice Gray and Judge Lowell, in a pamphlet of thirty years ago. Mr. Bryce puts it in the same way in his recent admirable book. Instead of its being true that it was then held that "a man of African descent was not and could not be a citizen of a State or of the United States," the case went no further in its *decision* than to hold that when a slave is taken by his master to a place where slavery is prohibited, and then comes back to a slave State and is a resident there, and is held by the highest court there to be a slave, he will be so regarded by the courts of the United States. Of course, the *dicta* of that case are a wholly different matter. In connection with remarks touching this case, Judge Hare observes that in this country "an erroneous interpretation of the Constitution [by the Supreme Court] is conclusive on the Legislature." Why should that be so? Conclusive, of course, as regards the case decided. But why should not the Legislature, like any jurist or private citizen, while bowing to all decisions of the courts, persist in its denial of a false interpretation of the fundamental law? Certainly, the text of this permanent instrument is one thing, and the interpretation of it by an ever-shifting body of judges is a very different thing. As Jackson might rightfully veto the new bank charter when he disputed the interpretation of the Constitution made by the Supreme Court, although we may well believe that his legal conclusion was wrong, so for sufficient cause Congress may at any time, in the exercise of its sound judgment, rightfully present, by new legislation, a new question for the courts; or may put its judgment on record in the form of a resolution. The Constitution is final, but the interpretation of it by a court can never be final, except as it is approved. It must always be subject to the searching and revising judgment of the learned, and to what Judge Hare has called "the public opinion which in the long run guides legislators and courts." Meantime, prudence and the requirements of orderly administration will often keep a legislative body far inside of what it may rightfully do.

Judge Hare has a full and very learned consideration of the subject of money and the legal-tender decisions. He supports the result reached in the later decisions of the Supreme Court, and with weighty argument. But he is far from approving the view that it is the power to borrow money which supports the making of Government notes a legal tender. He rests the power upon the right to regulate foreign and inter-State commerce, which is indeed a sufficient foundation. We commend his powerful arguments to writers who find themselves able to condemn the judgments of the Supreme Court on this subject with the easy confidence of Mr. John Fiske in his latest volume. This subject is not a new one to our author. Twenty-five years ago, in Borie vs. Trott, in 5 Philadelphia Reports, Judge Hare sustained the constitutionality of the legal-tender statutes of that time in an opinion which is not surpassed by anything that has since appeared.

The discussion of that fast-developing and portentous topic, the regulation of inter-State commerce, is full of instruction, but we can barely refer to it. Judge Hare has nothing to say on the curious matter of the legal status of our Indians. We wish that he might be led, in another edition of his book, to discuss more extensively a subject which has never yet received the full exploration which it deserves—namely, the precise nature of the question which the Supreme Court of the United States has in hand when it is considering the constitutionality of an act of Congress, and how far it is a different question when it is reviewing the act of a State legislature as touching a Federal question. But we must stop. It is easy to see that Judge Hare's book is the most important one of our time upon the subject which it treats.

The United States: Facts and Figures Illustrating the Physical Geography of the Country, and its Material Resources. By J. D. Whitney. Boston: Little, Brown & Co. 1889.

IN selecting Prof. J. D. Whitney to write the article upon the Physical Geography and Statistics of the United States, for their new edition of the 'Encyclopædia Britannica,' the editors made a wise choice. Among the older

geologists of the country he stands in the foremost rank, both in point of learning and of wide practical experience. Of that branch of his profession which occupies itself with the present relief of the earth's surface, its physical geography, he has made a special study, and, what is comparatively rare among those who aspire to be considered students of pure science, he has occupied himself largely with the problems of geology which have a direct practical bearing upon the development of the mineral resources of the country; the work which he published in 1854, upon the Metallic Wealth of the United States, having been for a long time the only trustworthy and scientific account of our wonderful mineral resources.

Those who are personally acquainted with Prof. Whitney will hardly be surprised to learn that, as stated in his preface, he feels that an injustice was done him by the cutting down and condensation of his article, "so that the meaning was often obscured and sometimes even rendered entirely unintelligible," and that he has republished the article, as originally presented, as a separate volume, a handsome octavo of over 450 pages, entitled 'The United States.' It consists mainly of a full and able discussion of the physical geography, and a briefer account of the mineral resources, with short chapters upon population and immigration, public lands, agricultural products, manufactures and foreign commerce, which were bodily excised by the editors; to which have been added, as an appendix, able papers on geographical discovery, cartographic progress, and barometric hypsometry (or the methods of determining the elevations of mountains). It is evident that, for the sake of the conciseness necessary for such a work as an encyclopædia, the editors are justified in omitting from an article such portions as are not of essential importance to the elucidation of the subject treated, but, in changing the language of an author, too great care cannot be taken lest his meaning be thereby rendered obscure or even unintelligible. An excellent illustration of how slight a change may accomplish this is unintentionally afforded by Prof. Whitney on page 331 of his own work, where, by printing "it" instead of "its gold," the meaning of the quotation in which it occurs is entirely reversed. The safer course in such cases is to submit all changes to the author's approval; but this is not always practicable.

Prof. Whitney's work in general bears the impress of great erudition, in both a literary and a scientific sense, and of a mind capable of broad and impartial generalization. Hence the occasional instances of a want of charity towards fellow-workers who may differ with him scientifically or personally are the more striking by contrast with the general tone of his writing. Such an instance is found in his characterization (page 321) of those who hold that trees once existed on the Western prairies, but have been destroyed by fire. His own view, that the treelessness is due to the exceeding fineness of the soil, which is known to be unfavorable to forest growth, seems more in accordance with observed facts; but the former view is still held by men occupying important positions in geological circles. He still holds to the theory that the iron ores of Lake Superior are of eruptive origin, in spite of recent investigations which have convinced all other geologists of prominence of the contrary view. In his account of the Comstock lode he quotes freely from the publications of Church and Lord, but makes no allusion to the intermediate and scientifically more important work of Becker. Again, in his admirable sketch of the progress of American cartography during the past half century, he completely ignores the general topographical map of the United States which is being made by the United States Geological Survey, and whose progress, although its publication as a topographical map has not yet been authorized by Congress, might readily have been ascertained from the annual reports of the Director. It would have been interesting had Prof. Whitney extended the comparative analysis of methods and results which he has made of the previous surveys, much to the disadvantage of those under Wheeler, to this later undertaking, which has the element of permanence wanting in the others, and which hence bids fair to be carried to completion.

The above are but minor blemishes in an able and admirable work, which forms a most valuable contribution to the literature of popular science. It is to be regretted, in the interest of the reading public, that Prof. Whitney, instead of confining himself to his article as originally written, did not enlarge his article on Mineral Resources to the fulness of his classic work on Metallic Wealth above mentioned; the annual value of our metallic products having increased during the third of a century which has elapsed since the publication of the latter from 79 to 250 millions of dollars.

The Authorship of the Fourth Gospel, and Other Critical Essays. Selected from the published papers of the late Ezra Abbot. Boston: Geo. H. Ellis. 1888. 8vo, pp. 501.

THIS collection of Dr. Abbot's papers will be welcomed by all critical students of the New Testament. Scattered about, as they were, in various periodicals, access to them was not easy, and their importance makes it desirable to have them within reach. It is hardly necessary to say that these essays are characterized by laborious research and conscientious discrimination. Whatever the subject Dr. Abbot discussed, no matter how minute the points involved, he bestowed on them an untiring care that was never satisfied till it had explored all accessible ground and questioned the most trustworthy authorities. His answers to inquiries of correspondents were as faithfully worked out as his articles in magazines. An illustration of his piety towards the details of his science is found in his little dissertation on the name of an editor of the Greek Testament, which appears on the title-page as G. D. T. M. D., "Gerhardus de Trajecto Mosae Doctor." As Trajectum Mosae is the Latin name of the Dutch town Maestricht, it had been assumed by many that the editor's name was Van Maestricht; Dr. Abbot shows, from about a hundred authorities, that he was a German (his grandfather having fled from his native city to Cologne), and wrote his name Von Mastricht. It is a small matter, but it is a specimen of his work; he owed much of his power to the necessity he felt of being accurate.

Most of the essays are discussions of the text of short New Testament passages or of editions of the Greek Testament. There is not one of these that does not contain digested collections of facts which it would cost any man great labor to make. Dr. Abbot's own accuracy made him a sharp observer of other men's inaccuracies. Mr. Burgon, a Fellow of Oriel College, Oxford, wrote a work in defence of the genuineness of the twelve last verses of the Gospel of Mark, in one of the appendices to which he maintained that there were certain notes of antiquity which infallibly set the Vatican manuscript before the Sinaitic. Dr. Abbot subjects his seven arguments to a searching examination, and, by an overwhelming array of facts, shows that not one of them can stand—a result which, in view of Mr. Burgon's confident and dictatorial tone, introduces the element of the humorous into the discussion. Tregelles, also, a man of very different calibre from Burgon, receives a like treatment from our critic, who, though courteous, was always outspoken. Some of these discussions are models of textual criticism. We can barely mention Dr. Abbot's exegetical work. His articles on the construction of Rom. ix. 5 (where, according to the common translation, Christ is said to be "God over all, blessed for ever") are mines of grammatical learning, and show at the same time a fine hermeneutical feeling, a delicate sympathy with his author's train of thought, and minute acquaintance with his literary style.

The principal paper in the collection is that on the authorship of the Fourth Gospel. In an essay of a hundred pages one could not treat the whole subject; Dr. Abbot confines himself to a few points in the external evidence, and deals especially with the question whether the Fourth Gospel is used by Justin Martyr and the early Gnostics. The value of the essay lies in the carefulness with which it sifts alleged citations from the Gospel, and its full discussion of the various explanations which have been given of the similarity between the evangelical text and passages in writers of the first half of the second century. The famous 'Supernatural Religion' receives the chastisement which its slovenlinesses richly deserve. Dr. Abbot's original contributions to the question discussed are most of them given in the form of notes at the end of the article. It would perhaps be going too far to say that he has finally settled the question of the quotations involved; but his array of evidence going to show that Justin used the Fourth Gospel is very strong, and no one can pass it over lightly. He makes a similar argument for the use of the Gospel by the Gnostic Basilides, A.D. 125; but here the testimony is less satisfactory.

The interest of these discussions for the literary history of the Fourth Gospel need not be pointed out. What is their bearing on the question of authorship? The use of the work by Justin, and especially by Basilides, would throw its composition back towards the year 100, and so far support the church tradition which ascribed it to the Apostle John. But this argument must not be pressed too far. A church tradition is not infallible; and if the literary conditions placed the composition of the Gospel before the death of John, still, the opinion which connected it with him might mean no more than that the author was believed to have derived his material wholly or in part from the Apostle. And, further, if it be supposed that the Apostle was the author of the Gospel, its value as a source for the life of Jesus must be judged of from its contents. If the Johannean authorship were established beyond doubt to-morrow, it is hardly probable that the opinions of critics respecting the discourses ascribed to Jesus would be thereby materially modified.

Hearty thanks are due to Prof. J. H. Thayer of the Harvard Divinity School for the friendly care he has bestowed on this memorial of one of the most eminent of modern New Testament critics. The book is well printed, and is provided with adequate indexes.

Archives of Maryland. Correspondence of Gov. Horatio Sharpe. Vol. I. Edited for the Maryland Historical Society by Wm. Hand Browne. Baltimore. 1888.

THE period covered by this work, 1753–1757, is

more recent than that of the previous publications of the Maryland Historical Society, and also more replete with interesting and stirring events. The year 1754 saw the beginning of the struggle between France and England for the possession of North America, in the attempt by the French to carry out Galissonière's gigantic idea of uniting their settlements from the mouth of the St. Lawrence to the Gulf of Mexico by a cordon of military posts. In pursuance of this scheme, a small fort at the junction of the Allegheny and Monongahela Rivers was seized, awakening the liveliest alarm among the English colonists. Maryland and Virginia, from their proximity to the path of French invasion, felt especially concerned, and a force was sent out by Gov. Dinwiddie, under the command of Col. Washington. In a skirmish with a party of French led by De Jumonville, the latter was killed and his command dispersed; but Washington was soon after forced to capitulate at Great Meadows. The French always asserted that De Jumonville had been unfairly attacked while on a peaceful mission; and Washington was further mortified by a phrase inserted in the terms of capitulation, which spoke of the French officer's death as an "assassination"—a slur on the British arms which seemed to be admitted by Washington's acceptance of the terms and signature to the articles. He finally explained that one of his officers, in making an oral translation of the articles to him (as his own knowledge of French was imperfect), had softened the ugly word "assassination" into "death."

Sharpe's considerable military experience caused him to take the lead among his brother governors in directing and supplying the sinews of the war, which now began in earnest. He displayed the greatest energy and activity in organizing the campaign and obtaining and forwarding supplies. His incessant correspondence with the governors, the Proprietary, the chief officers, and the home authorities gives a most minute record of all events of interest. Especially did Sharpe afford a shining exception to Braddock's reproach of lukewarm support by the colonial authorities. He exerted himself to the utmost to further that unfortunate expedition, and, when all went wrong, to repair the disastrous effects of the defeat. Far from receiving hearty coöperation and support in his work, the Governor was hampered or opposed at every turn by the parsimonious course of the Assembly, which, after the tradition of representative bodies, used the purse-strings as its weapon against the Proprietary when they were at variance. Hence the unqualified expressions of disgust with the Burgesses which appear in Sharpe's letters to England. For instance, he calls them "men of small fortunes, no soul, and very mean capacities"; and again, in a letter to his brother, he congratulates himself on a prorogation of the Assembly, "that I have rid myself of a parcel of wretches whose company I begin sincerely to detest." We find him proposing to the home authorities solutions of the much-vexed question of how the colonies might be compelled to contribute to support the war for the common defence; in 1754 he suggested a stamp duty, which was tried with such ill-success eleven years later. We notice the appearance of several other germs which afterwards developed into the great struggle for independence.

The materials for the present volume have been taken from the manuscript letter-books of Sharpe, and a mass of letters to him, in the collection of the Historical Society; and in small part from the Calvert Papers, on whose recent discovery and acquisition the Society is to be congratulated. Like its predecessors, this volume is furnished with full and careful indexes, and is altogether an extremely valuable contribution to our knowledge of a most important period of American history. The State of Maryland has honored itself by the publication of these Archives, in which the historic sense, skilful and scrupulous editing, and admirable typography have been combined in an unusual degree. From this stage on, the support annually given to the enterprise must be even more cordial than heretofore, as the Revolutionary era is approached, and men and events come to view whose connection with our own time is plainly traceable.

A History of England. By the Rev. J. Franck Bright, D.D., Master of University College, Oxford. Period IV. Growth of Democracy. Victoria. 1837-1880. With maps and plans. E. P. Dutton & Co. 1888. Pp. 596.

We have at various times called attention to the admirable History of England by the Rev. J. Franck Bright, the successive volumes of which have appeared at intervals during the last fifteen years. The fourth volume, now before us, brings the work down to the year 1880, thus completing it. It is a work, as will be seen, of not far from the dimensions of Green's larger history, but is totally different in its character, being rather, in the old fashion of histories, carefully arranged by reigns and dynasties, and holding to the chronological plan as closely as is possible in so complicated a work. The two books supplement each other admirably, as the reader of Green's glowing pages often misses something of the methodical arrangement of the ordinary history. But Mr. Bright is by no means deficient in the qualities that go to make a popular historian. He tells his story extremely well, soberly, but with a good degree of animation, and his judgment is cool and sound.

The shape of the book is against it—it is too small for its thickness, and thus loses in attractiveness; but its accessories—index, chronological tables, etc.—are of the best. The present volume (1837-1880) will be found a remarkably full and satisfactory history of our times, occupying nearly 600 pages. In each administration we have a complete list of the members of the Government, and at the commencement of the volume there is a list of contemporary sovereigns. There are ten maps and plans, all good and some excellent. We think it a mistake, in the plan of the battle of Alma, to have the points of the compass inverted. It might be well if our school atlases had such a variety of arrangement as not to encourage the notion in children that the north is *up*, but for an isolated map it is misleading to disregard the prevailing convention. It is also a pity, in the map of the Southeast of Europe, that boundary lines are not given.

BOOKS OF THE WEEK.

Austin, J. O. Ancestry of Thirty-three Rhode Islanders (born in the Eighteenth Century): also Twenty Charts of Roger Williams's Descendants to the Fifth Generation. Albany: Joel Munsell's Sons.
Baker, M. N. The Manual of American Water-Works. 1888. Engineering News.
Boyesen, H. H. Vagabond Tales. Boston: D. Lothrop & Co. $1.25.
Burnett, Frances Hodgson. Miss Crespigny: A Love Story. Philadelphia: T. B. Peterson & Bros.
Caird, Mona. The Wing of Azrael. Frank F. Lovell & Co. 30 cents.
Devey, Louisa. Letters of the late Edward Bulwer, Lord Lytton, to his Wife. G. W. Dillingham.
Dunham, Dr. M. E. Here and Hereafter: This Life a Type of the Life to Come. Utica: William T. Smith.
Durand, J. New Materials for the History of the American Revolution. From Documents in the French Archives. Henry Holt & Co. $1.75.
Esperanto, Dr. An Attempt toward an International Language. Henry Holt & Co. 25 cents.
Genung, Prof. J. F. Handbook of Rhetorical Analysis. Studies in Style and Invention. Boston: Ginn & Co. $2.25.
Goethe. Faust: a Tragedy. 2d Part. Vol. II. Longmans, Green & Co. $2.25.
Gould, John. The Birds of Great Britain. The Birds of New Guinea. The Trochilidæ or Humming Birds. Each in 25 parts. London: Henry Sotheran & Co.; Philadelphia: J. B. Lippincott Co.
Gozlan, L. Valentine: A Novel. The United Service Publishing Co. 25 cents.
Hartley, Dr. I. S. Sundays in the Adirondacks. Utica: William T. Smith.
Malory, Syr T. Le Morte Darthur. Faithfully Reprinted from the Original Edition (1485) of William Caxton. Edited by H. O. Sommer, Ph.D. Vol. I. Text. London: David Nutt.
Miss Kate; or, Confessions of a Caretaker. Frank F. Lowell & Co. 30 cents.
Shields, M. O. Izma; or, Sunshine and Shadow. J. S. Ogilvie.
Smith, C. J. Synonyms Discriminated: A Dictionary of Synonymous Words in the English Language. New ed. Henry Holt & Co. $1.25.
Smith, T. E. V. The City of New York in the Year of Washington's Inauguration, 1789. Printed for the Author.
Sneddon, D. Burns Holograph Manuscripts in the Kilmarnock Monument Museum. With Notes. A. C. Armstrong & Son. $1.50.
Starr, Prof. L. Hygiene of the Nursery. 2d ed. Philadelphia: P. Blakiston, Son & Co. $1.
Stebbins, Genevieve. Society Gymnastics and Voice Culture. Edgar S. Werner.
Temple, Sir R. Lord Lawrence. Macmillan & Co. 60 cents.
The Ideals of the Republic; or, Great Words from Great Americans. G. P. Putnam's Sons. $1.
Timsol, R. An Alien from the Commonwealth. Boston: Cupples & Hurd. $1.50.
Tolstoi, Count L. N. My Religion. T. Y. Crowell & Co. 50 cents.
Tuckerman, B. The Life of General Lafayette. 2 vols. Dodd, Mead & Co. $3.
Tuttle, H. Studies in Psychic Science. M. L. Holbrook.
Valentine, Jane. Time's Scythe. Cassell & Co. 50 cents.
Venn, J. The Principles of Empirical or Inductive Logic. Macmillan & Co. $4.50.
Verschoyle, Rev. J. The History of Ancient Civilization: A Hand-Book. Illustrated. D. Appleton & Co. $1.75.
Villari, Prof. P. Life and Times of Girolamo Savonarola. With Portraits and Illustrations. 2 vols. 2d ed. Scribner & Welford. $9.
Waller, M. E. A Cathedral Story. Boston: Estes & Lauriat. $1.50.
Waller, M. E. The Rose-Bush of Hildesheim. Boston: Estes & Lauriat. $1.50.
Walworth, Mrs. J. H. Baldy's Point. Cassell & Co. 50 cents.
Waring, Mrs. Clark. The Lion's Share. Belford, Clarke & Co. 25 cents.
Warner, Anna. A Servant of the King: Incidents in the Life of the Rev. Geo. Ainslie. John Ireland.
Weir, J. F. The Way: The Nature and Means of Revelation. Boston: Houghton, Mifflin & Co. $1.75.
Wentworth—McLellan—Glashan. Algebraic Analysis. Solutions and Exercises Illustrating Fundamental Theorems. Parts I. and II. Boston: Ginn & Co. $1.60 each.
Wheeler, W. A. An Explanatory and Pronouncing Dictionary of the Noted Names of Fiction. 19th ed. Boston: Houghton, Mifflin & Co. $2.
Whitney, Prof. J. D. The United States: Facts and Figures Illustrating the Physical Geography of the Country and its Material Resources. Boston: Little, Brown & Co.
Whittier, J. G. The Tent on the Beach. Boston: Houghton, Mifflin & Co.
Wilde, P. The International Medical Annual and Practitioner's Index. 1889. A Work of Reference for Medical Practitioners. E. B. Treat & Co. $2.75.

The Nation.

NEW YORK, THURSDAY, MAY 23, 1889.

The Week.

It appears to be generally believed that the President will appoint his law partner, Attorney-General Miller, to the vacant place on the Supreme bench. There are signs, even among the Republican organs which are already subsidized or hoping to be subsidized, of surprise and disgust at such a proposition. But there is really no occasion for surprise that Mr. Harrison should think of giving so great an honor to a man who would never so much as have been thought of for such a place, by his most partial friend, if he had not been the President's law partner. As Senator, Mr. Harrison showed plainly that he regarded public office as a private benefit for his family and friends, and it could not have been expected that as President he would take any different view.

Senators Cullom and Farwell, according to common report, have "locked horns" with the President on the appointment of an Internal-Revenue Collector whose office is at Springfield, Ill. This is the home of Mr. Cullom, and it seems that an amendment of the Constitution has been surreptitiously and secretly adopted which provides that when an Internal-Revenue Collector has his chief place of business near the domicile of a Senator, then the Senator, if he belong to the same political party as the President, shall name the Collector, and nobody else shall have anything to say about it except to acquiesce in the nomination so made. This amendment would be No. 16 in the list, taking precedence of the two others that have been frequently accorded that place—namely, the one granting woman suffrage and the one recognizing God in the Constitution. Leaving out of view the mode and manner of bringing this clause into the fundamental law, we are moved to inquire why the internal-revenue collectors should be more particularly put at the disposal of Senators than United States marshals, district attorneys, pension agents, collectors and surveyors of ports, sub-treasurers, and other functionaries whose business extends over a large territory, but whose offices are for convenience fixed at some large town or city. The affair is very mysterious, however we look at it. We hope that the President and Congressman Cannon will take heed how they run counter to the Sixteenth Amendment.

If the news from Indianapolis be true, that a special examination has been ordered in that city to provide clerks to take the places made vacant in the post-office by a projected "clean sweep," it will make the position of the civil-service reformers in that quarter more trying than ever. They have all along been among the most faithful and uncompromising of the disciples. The more the heathen raged around them, the more fervid their faith grew. They deserted President Cleveland's standard because of his aberrations from the strict line of orthodoxy, and vouched for Gen. Harrison's soundness. Their position now is, therefore, one particularly embarrassing. But there is not the least sign that they fear to meet the crisis in the only way known to honest men. They refuse to condone any slips or backslidings on the part of the new Administration, and demand unceasingly the observance of the law in spirit and in letter. As they operate principally in and around Gen. Harrison's "home," their troublesomeness in his eyes may be readily imagined. By the way, we observe that the New York *Tribune* is becoming alarmed. It calls on "the hungry horde" to stop exerting "a tremendous pressure on the appointing officers." It also calls on "some unthinking persons" not "to confound civil-service reform with the practices of the last Administration," and asks certain "quarters" not to "make contemptuous references to civil-service reform." But we doubt if either "the hungry horde" or "the unthinking persons" will pay much heed.

The appointment of Hirsch to succeed Mr. Oscar Straus as Minister to Turkey comes somewhat untimely, while the Presbyterian General Assembly is in session in this city. The chief American interests in Turkey are those of benevolence. We have little trade with Turkey, but we have very important missionary and educational establishments there, maintained by the Presbyterians and Congregationalists. Besides the direct work of the Presbyterian Board of Foreign Missions and the American Board, there are a number of large colleges, such as Robert College, at Constantinople; the Syrian Protestant College, at Beirût, the Armenia College, at Harpût; the Anatolia College, at Marsovan; the Central Turkey College at Aintab; a number of important girls' boarding-schools or colleges in various cities, and the Bible House at Constantinople. These provide the most important educational, if not religious, influence of all those that are regenerating Turkey. Now let it be remembered that all this American influence in Turkey, backed by the whole influence of the Christian Church in this country, so far as it is interested in Turkey, has been united in seeking the retention of Mr. Straus as the American Minister at Constantinople. It is true that he is a Jew, as his successor is, but he has given himself to his duties with an assiduity which has no parallel in the succession of our representatives at the Porte. He has not sought to have a good easy time, to see the sights of the East, to hobnob with the Sultan, but he has done what no other man has been able to do in opening schools shut by the Turkish authorities, and securing the withdrawal of edicts prohibiting the circulation of books or the erection of needed buildings. An indifferent minister is a great loss to this very important and influential American colony in Turkey. Therefore, missionaries, societies, colleges, and, we may add, the Philadelphia Directors of the American Exploring Expedition now at work excavating in Babylonia, all used what influence they had to secure the retention of Mr. Straus, but in vain. The post is given to an active politician, who doubtless has political claims, or the party in his State has claims, which are much stronger than those represented by the General Assembly of the church in which Mr. Harrison is a ruling elder, or by the American residents and institutions in Turkey. For Elder Harrison's own sake, it would have been better if he had delayed the announcement of the successor to Mr. Straus until after the adjournment of the General Assembly.

When Mr. Cleveland became President, a Republican, of course, was Postmaster of New Bedford, Mass. As in the case of Norwich, Conn., and hundreds of other important offices, the Democratic President furnished what even the Boston *Journal* at last confesses to be a "conspicuous" illustration of the spirit and purpose of civil-service reform, by allowing this Republican incumbent to serve out his term, although it lasted for two of the President's own four years. A Democrat named Carpenter was appointed as his successor in 1887, and has proved a most efficient Postmaster. No complaint of his administration was ever heard, and leading Republican business men assured him of their desire that he should serve out his term, among the number being Mr. Lemuel LeB. Holmes, a well-known Republican, and a member of that party's City Committee, and Mr. Jonathan Bourne, one of the most prominent Republicans in southeastern Massachusetts. About a month after the inauguration, however, Mr. Carpenter called upon Mr. Holmes, and told him that he had heard he was to be removed. The very next day came a telegraphic announcement of his removal. A few days later an explanation was sent out that the removal was made for alleged inefficiency. So gross an outrage did Mr. Holmes consider this that he went to Washington in order to seek an explanation. Postmaster-General Wanamaker told him that the removal of Mr. Carpenter was made upon representations of Pay-Director Thornton of the United States Navy, charging inefficiency, dated April 2, endorsed by Congressman Randall under date of April 4. Mr. Wanamaker said that the judgment of such a high official was deemed sufficient cause for the removal, and that the endorsement of the Congressman amply justified it, the Congressman being entitled to represent the wishes of his people at Washington. It was the circumstance of these two letters alone which led to the removal.

Mr. Holmes replied that it was not right. The people, he said, were satisfied with Mr. Carpenter's administration, which had been perfectly efficient, and the spirit of civil-service reform seemed to demand that he should be permitted to serve out his term. The Democrats, upon coming into power, after having been shut out from the offices for twenty-five years, had retained the Republican postmaster for two years, and the comparison which would be drawn would be unfortunate for the Republican party, and it would be difficult to meet the criticism which would surely be made in the fall. He sought to impress the fact that no dissatisfaction or inefficiency existed. He further pointed out that Mr. Thornton was in New Bedford very rarely, and that his only business with the office was the reception of an occasional letter. He had made no complaint, nor had he had any communication with the Postmaster or his clerk. Mr. Wanamaker finally suggested that Mr. Holmes should make a written protest against issuing the commission, which he did, and the Postmaster-General promised to withhold the commission until he could confer with Mr. Randall. Upon his return to New Bedford, Mr. Holmes made further protests by mail against the outrage, but the correspondence was finally closed by this letter from Postmaster-General Wanamaker under date of May 7: "I beg to acknowledge the receipt of your esteemed letter, and say that on further consultation with your representative in Congress the Department has issued a commission to the Postmaster of New Bedford, Mass."

The very feeling tribute of Col. Elliott F. Shepard to the late Allen Thorndike Rice suggests the fitness of his appointment as Mr. Rice's successor as Minister to Russia. Malicious persons insinuated that the Colonel was himself a candidate for this place when Mr. Rice was chosen. They pointed to the fact that while he had abundant words of laudation for all the other new ministers, he said nothing about Mr. Rice. Some said that he refrained from praising Mr. Rice on strictly moral grounds. But this was a mistake, for it is now plain that he always held Mr. Rice in the highest esteem, both morally and intellectually. However that may be, a vacancy exists, and who more fit to succeed to it than a sorrowing brother editor? We hope that President Harrison will avail himself of this opportunity to elevate the tone of our diplomatic service, for although journalism would suffer by the Colonel's absence from this country, the cause of orthodoxy would be strengthened in Russia by the presence at that court of the most religious Republican in the world.

It is scarcely worth while to review formally the work of the New York Legislature which adjourned on Thursday. It passed several excellent measures, including the Saxton Ballot Bill, the Fassett Prison Labor Bill, and the Excise Bill, some of which the Governor may allow to become laws. In general character, the members showed themselves to be inferior to the very low standard of previous years; their conduct in reference to the ceiling scandal and the "deal" bills of this city surpassing in partisan subserviency anything which has been seen at Albany for several years. The Republican members, who were in the majority in both houses, allowed themselves to be moved in solid mass in favor of or against any proposition according as they were ordered by their party boss, "Tom" Platt. They held the Rapid-Transit Bill back until they were ordered to push it ahead in return for promise of offices and patronage from the Mayor of this city. When the Governor failed to sanction this bargain in all its details, they instantly blocked the progress of the bill again, and began fresh negotiations with the Mayor. There was no concealment about these proceedings, and in this respect the late Legislature was the most shameless that we have had since Tweed's time. The Republicans took the ground openly that they were in Albany, not to legislate for the best interest of the State, but to use their power as the majority to levy "blackmail" upon Democratic officials who had offices to bestow.

The ceiling scandal burst upon the Assembly when it first came together in January last. For more than five months it was with the members constantly. They had it investigated by two committees and by two sets of experts. These inquiries showed beyond the shadow of a doubt that the State had been swindled at least $120,000 on a $270,000 contract. It showed also who the guilty parties were. The first investigating committee made a whitewashing report mildly censuring the more guilty, having hastily stopped its inquiry lest more damaging evidence should be forthcoming. This report was so obviously in the interest of the swindlers that even the Assembly could not rest content with it, and a new investigation was ordered, the first report having been adopted in the meantime. The second committee found much more specific evidences of fraud, and would have found still more had not the chief swindlers taken to their heels, carrying with them their incriminating documents. This second committee made a report which, if adopted, would have enabled the State to regain some of its stolen money, would have protected it against further swindling, and would have brought the guilty persons into court. What did the Assembly do in this emergency? Openly and deliberately it took the side of the swindlers by substituting for this second report the first report, which had already been once adopted. This brought the refugees back in full confidence of immunity.

The *Tribune* ventures to say that "the conspicuous and well-known Trusts are all Democratic in management, and operate without regard to the tariff." Then, by way of illustration, it adds that "the Standard Oil owes nothing to the tariff, nor the Cotton-Oil Trust; and the Sugar Trust secretly consorted with Mr. Mills and his Dark-Lantern Committee in the preparation of their free-trade bill, and helped to get it votes." We have no doubt that Democrats are quite as willing as Republicans to make money out of Trusts, but we observe that they are not so successful in that line. When it was charged in the Senate (by Mr. Dawes, we believe) that the Standard Oil Trust was a Democratic concern, Senator Payne replied that every one of its directors was a Republican in politics, and that its ownership was Republican by an overwhelming majority; and nobody ventured afterwards to deny or question the truth of what he said. The Cotton-Oil Trust is now controlled by the Standard Oil Trust —so the Boston *Commercial Bulletin* tells us. The Sugar Trust certainly did all that it could for Harrison and Morton in Brooklyn, and its influence was not inconsiderable. We presume, however, that it "consorted" with all committees at Washington that had anything to do with the tariff. It is the usual course, we believe, of all persons, firms, corporations, and Trusts that enjoy protection under the tariff, to "consort" with those who have tariff bills in their charge, without squeamishness on the subject of politics. If we owned any certificates in the Sugar Trust, we should sell them the very moment we learned that the Trust showed any bashfulness about going to Washington and consorting with any party or committee that happened to be uppermost. The *Tribune* shows a disposition to throw overboard the protective duties that the Trusts feed on, "when protective duties are, in fact, used as a means of restricting production and denying the benefits of protection to consumers." The field of debate here opened is a wide one. Every Trust will be able to show that it does not fall within the *Tribune's* category.

The recent decision by the Inter-State Commerce Commission as to the rights of negro passengers on railroad trains is heartily endorsed by leading Southern newspapers. The decision was rendered in the case of a colored preacher who bought a first-class ticket from Augusta to Atlanta, but was compelled to ride in a "Jim Crow" car, half of which is devoted to smokers. The Commission held that the railroad company may separate passengers according to color, but that it must make the cars provided for white and colored passengers equal in comfort, accommodations, and equipment for persons paying the same fare. "Of course," says the Macon *Telegraph*, "the Commission could have decided this case in no other way. Clean, comfortable cars should be set apart for negro passengers. They are required to pay the same fare as passengers in the best coaches, and no discrimination should be made against them in the matters of accommodations and the preservation of order in their separate cars." The *Telegraph* says that the Central Road sets apart a first-class coach, as good as any on the train, for the exclusive use of colored passengers, and no white person is allowed to ride in that car, as no negro is permitted in the first-class coach for whites. This plan, it thinks, meets the full requirements of justice to all, and it considers it the

most satisfactory arrangement that can be made for both races.

Wool "tops" are admitted at our customhouses at a duty of ten cents per pound, which is the same rate as that of unwashed wool. Tops are pieces of broken yarn which the weaver throws aside as waste. But tops can be used to make good merchantable cloth if there is a sufficient inducement to do so. That there is such an inducement is made clear in a report of Consul Grinnell of Bradford, England, who says that the exportation of tops from that district to the United States during three months has exceeded by more than one million pounds the production of genuine waste in a whole year. The secret of the matter is, that tops are composed of scoured wool, upon which the duty is three times that of wool as it comes from the sheep's back, or thirty cents per pound. It becomes an advantage to the American manufacturer, therefore, to import broken yarn, and, of course, the Bradford spinner or comber is ready to produce anything that there is a market for. So we have the interesting spectacle before us of a foreign manufacturer producing good yarn, and then deteriorating its value by breaking it in small bits in order to get it into this country, where it may be restored by another laborious process to nearly as good condition as before. All this is by the way of "protecting American industry."

The idea of settling the labor problem on some sort of international plan, so that there shall not be any serious competition between the laborers of different countries, has been running in the heads of the labor agitators on the Continent of Europe for a long time. The Swiss Government has so far acceded to their wishes as to call an international conference, to meet at Berne, to arrange for something like uniformity of conditions in the factories of different countries, so that there shall be in all the same hours of labor and the same restrictions on the labor of women and children. All this calls forth from M. Leroy-Beaulieu one of his most vigorous protests in the *Économiste Français*, on the ground that uniformity of manners in different countries, if it could be brought about, would be fatal to our civilization; that uniformity of weights, measures, and money, and of all the laws regulating international dealings, is a good thing, but uniformity of life among the men and women of different countries would put an end to all progress and development, and ought not to be aimed at. He maintains, moreover, that, owing to the difference of the productive power of labor in different countries, uniformity of hours would be the ruin of those countries in which the laborer has, in order to compete with more favored races, to make up for the inferiority of his powers by lengthening his hours of toil. For instance, he points out that, if the Frenchman, Spaniard, Italian, or Hindu were to insist on having as short a day as the Englishman or American, he would be hopelessly beaten in the markets of the world, because he cannot accomplish as much in the hour as the Englishman or American can.

Late European newspapers occupy themselves a good deal with the proceedings of the Catholic Congresses that met during the last week in April and the first in May at Malines, Oporto, Madrid, and Vienna. All these assemblies, which should perhaps be called Ultramontane rather than Catholic or even Roman, spoke with a unanimity which would be surprising if it were not also suspicious. In almost identical words, each demands "the entire and complete sovereignty of the Supreme Head of the Church, which is necessary to him for the fulfilment of his office of pastor and teacher," and each shows covert or open hostility to the Italian Government. Whether all this will end in anything more and worse than talk, nobody can say. The *Temps* seems somewhat alarmed, and thinks that the assemblies are the Council of Clermont of a new crusade, and that Peter the Hermits will not be lacking; but the *Temps* is never overbold. To most eyes the Temporal Power looks like the deadest of all lost causes. One does not forget that the Popes came back again after the Babylonian captivity; but one remembers at the same time that the Babylonian captivity was a long while ago.

This unanimity of the Catholic conferences in demanding the restoration of the temporal power has been followed up, or rather accompanied, by some stern measures in the same direction at Rome. Mgr. Bonomelli, the Bishop of Cremona, lately wrote a pamphlet called 'Rome, Italy, and the Real State of Things,' advocating the establishment of some sort of *modus vivendi* between the Pope and the Italian Government. His pamphlet has just been condemned by the Congregation of the Index, which has special charge of wicked publications, and the author has been compelled to read a retraction of it, and profess his penitence for having written it, in the pulpit of his own cathedral at Cremona. Possibly, however, he may take some comfort in the news that since the condemnation the Secretary of the Congregation who signed the decree, Mgr. Saccheri, has disappeared from Rome, leaving behind numerous debts and mourning creditors.

One of the most curious things in the attitude of the French Radicals is the appetite they show for being offensive to the pious Catholics of the country, still a very large and influential body. There was doubtless much to be done in the way of "laicization" after the Republicans came really into power, owing to the abnormally influential position given to the clergy in French politics under the Empire, and to a sort of superiority to the law which the French Bishops have enjoyed ever since the conquest of Gaul by the Franks. The invaders found the Bishops the only remnant of Roman rule, enjoying great eminence and authority, and were converted and civilized by them; and ever since then the French Bishop has been more of a potentate than his confrères in any other European country except Italy. To the French peasantry since the Revolution he has always figured as the equal of the Prefect and the General commanding the Department, as the representatives of earthly dominion and power. The Republic has therefore hard work in thrusting him "out of politics," as we should say—that is, in making him understand he is neither more nor less than a plain citizen. But the Republicans have in all work of this kind apparently taken pains to offend Catholics and to shock their prejudices. One of the worst things they have done in this direction is their effort to have theological students, heretofore exempt, compelled to serve three years in the army. The Bishops say, with great force, that if this be insisted on, they might as well shut up the seminaries, because, after three years in barracks, it would be impossible to make a priest of any young man, and the material for good priests is already sufficiently scarce. But the more the Bishops protest, the more strenuously the Radicals push their point, and it is probable that disagreement on this question with the Senate will lead to the breakdown of the army bill now pending.

Detailed information regarding the action of the Government in prohibiting speculation in gold on the Bourse of Buenos Ayres shows that it was a rigorous measure rigorously executed. As soon as the new Minister of Finance, Señor Varela, came to his post, he bent all his efforts to reducing the premium on gold. But in spite of all he could do, the price of gold steadily advanced from 135 last December to 160 in February. He attributed this largely to the speculation of the Exchange. In February, the Minister showed, the dealings in gold amounted to $90,000,000, while the actual needs of commerce would not have called for more than $5,000,000. It was on March 20 that the decree was issued declaring all buying and selling of gold, not for immediate delivery and immediate use, to be illegal. More than this, the doors of the Exchange were closed at once by the police and a guard of soldiers stationed before them. The members of the Exchange naturally felt themselves highly aggrieved, and would not agree to live up to the terms of the decree, which was the reason why the Government resorted to extreme measures. The larger part of the press strongly opposes the new law, yet it is popular with the country at large, and there seems to be no immediate prospect of its repeal. The effect upon the price of gold, however, has not been what the Minister of Finance hoped and predicted; that has changed but little since the date of the decree. He maintains, of course, that the speculators are still at work secretly to keep up an artificial price and prove the decree useless. However this may be, with the imports so largely exceeding exports, and especially with such a constant drain of gold to pay interest on the immense foreign loans, a specie basis for the Argentine Republic is not yet in sight.

THE ADMINISTRATION AND ITS PLEDGES.

THE PARTY'S PLEDGE.

The spirit and purpose of the reform [in the civil service] *should be observed in all Executive appointments*, and all laws at variance with the object of existing reform legislation should be repealed, to the end that *the dangers to free institutions which lurk in the power of official patronage* may be wisely and effectually avoided.—*Republican National Platform of 1888.*

THE PRESIDENT'S PLEDGE.

In appointments to every grade and department, fitness and not party service should be the essential and discriminating test, and fidelity and efficiency the only sure tenure of office. Only the interest of the public service should suggest removals from office.—*Harrison's Letter of Acceptance.*

HOW THE PLEDGES HAVE BEEN KEPT.

WANAMAKER, JOHN. Appointed Postmaster-General in return for his efforts in raising a large campaign fund during the closing weeks of the Presidential campaign, to be used in securing Harrison's election. Has been a clothing-dealer all his life; took no important part in politics till last year, and never held public office till selected for the Cabinet. Is a professing Christian of unusual activity, and Superintendent of the Bethany Sunday-school in Philadelphia.

CLARKSON, J. S. Appointed First Assistant Postmaster-General in return for his services as Vice-Chairman of the Republican National Campaign Committee. Mr. Clarkson was also the editor of the *Iowa State Register*, which warmly supported Harrison. Since his entry to office he has distinguished himself by the unprecedented rapidity with which he has removed Democratic postmasters and appointed Republicans in their places.

TYNER, JAMES N. Appointed Assistant Attorney-General for the Post-office Department for political services; was formerly First Assistant Postmaster-General, and was asked to resign by President Arthur and Postmaster-General James because he had once been a lobbyist in behalf of the Star-route thieves, who were then being prosecuted, and it was impossible to place any confidence in him.

VAN COTT, CORNELIUS. Appointed Postmaster of New York as a recognition of the Republican Boys, among whom he has long been a leader; has been a professional politician all his life, and at the time of his appointment had no knowledge whatever of the postal business, or any fitness whatever for the duties of the office. In appointing him the President displaced Mr. Pearson, who had held the office for eight years, who had, though a Republican, been retained for four years by President Cleveland, and who had been as efficient a Postmaster as the city or the country had ever had; and thus put the office back into politics, or into a condition from which it had been taken by President Grant when he appointed Mr. James in 1873.

VANDERVOORT, PAUL. Appointed Superintendent of Mails at Omaha as a reward for his services as a politician; held a similar position under Postmaster-General Gresham, and was dismissed by him in 1883 for insubordination, for making false reports to the Department, and for being absent from his post of duty 265 days in one year. The leading Republican newspaper of Nebraska, the Omaha *Bee*, says of him: "Vandervoort is an inveterate braggart and liar. . . . The nickname of 'Vanderbum' is not a slander. It is a matter of common notoriety that Vandervoort's associates, when he was chief clerk, were ward-bummers, roustabouts, and rowdies of the lowest degree. It is notorious that he often detailed railway mail clerks from the service to assist him in packing ward caucuses and fighting at political primaries, and substituted for these regular mail clerks irresponsible vagabonds and bummers who were transported in the mail cars in charge of the mails without even taking the oath. It is notorious that Vandervoort was hired and paid by the Union Pacific Railroad for conducting the legislative oil-rooms at Lincoln, with their drunken orgies and vile methods of decoying members into corruption by downright bribery." These facts about him were published at the time of his appointment, on April 23d last, but he is still retained in the service.

LOVING, J. T. Removed from his clerkship in the Railway Mail Service, and, when he applied to the Superintendent for the cause, was told: "The action was taken in consequence of no fault on your part, or for reasons affecting in any way your character or standing as a citizen. The reasons for your retirement were of a political nature."

CARUTHERS, WILLIAM. Appointed Postmaster at Norwich, Conn., a place having been made for him by the removal of a faithful official fourteen months before the latter's term had expired; under President Cleveland, the Norwich Republican Postmaster had been allowed to serve out his term and two months besides, being retained in office one year and four months after Cleveland came in; but the Democratic Postmaster whom Cleveland appointed, and who has conducted the office on civil-service reform principles, has been removed by Harrison fourteen months before the end of his term, and his successor, within twenty-four hours after taking possession, discharged every Democratic employee except one.

GIFFORD, CHARLES H. Appointed Postmaster at New Bedford, Mass., in spite of the protests of the leading Republican newspaper of the city and of leading Republican politicians, who declared that the Democratic incumbent was an efficient and faithful official, who conducted his office on civil-service reform principles, and should be allowed to serve out his term. The same Republican authorities called attention to the fact that President Cleveland had allowed the preceding incumbent to retain his office two years after the Democratic Administration had come in, and urged that the Harrison Administration maintain the same principle. All protests were in vain; the Democrat was removed without cause two years before his term had expired, and a Republican put in his place.

ROBERTS, ELLIS H. Appointed Assistant United States Treasurer at New York city as a reward for his services in supporting Harrison in the Utica *Herald*, of which he is the editor.

TANNER, JAMES. Appointed Commissioner of Pensions because of his campaign services in rallying the soldier vote; has been a professional soldier politician for many years; has no fitness for the duties of the office, and is an avowed advocate of almost unlimited pensions.

PORTER, ROBERT P. Appointed Superintendent of the Census as a reward for his services in supporting Harrison in the New York *Press*, of which he was the editor. Is a most unfit man for the place; is an Englishman by birth, and was formerly an advocate of free trade. He changed his principles soon after he changed his country, and became a violent and dishonest advocate of protection; wrote a series of letters misrepresenting and maligning his native country, juggling with and distorting figures to make them bear false witness against it; and was caught during the Harrison campaign making a false and misleading quotation from the report of a Parliamentary Commission. His general reputation as an unsafe statistician is so bad that he has felt obliged, since his appointment, to publish a card saying that he will make a "fair and honest census." His appointment is yet to be confirmed by the Senate.

EGAN, PATRICK. Appointed Minister to Chili as a recognition of the value of the votes of the Irish faction led by Patrick Ford; the appointment is said to have been granted as a special favor to Ford. Egan was at the time barely a citizen of the United States, having been in this country only a few years.

REID, WHITELAW. Appointed Minister to France as a reward for supporting Harrison in the New York *Tribune*, of which he was the editor.

HALSTEAD, MURAT. Appointed Minister to Germany as a reward for his services in supporting Harrison in the Cincinnati *Commercial Gazette*, of which he is the editor.

HICKS, JOHN. Appointed Minister to Peru as a recognition of his services in advocating the election of Harrison in the Oshkosh *Northwestern*, a Wisconsin newspaper of which he is the editor; if he has any other qualification for the place, it has escaped mention.

NEW, JOHN C. Appointed Consul-General at London as a reward for his services in supporting Harrison in the Indianapolis *Journal*, of which he was the editor; except for his partisan services he would never have been thought of for the place.

JARRETT, JOHN. Appointed Consul at Birmingham as a reward for organizing laboring men to vote in favor of protection; has

been the paid agent of the heavily protected iron manufacturers to do this work for several years.

HIRSCH, SOLOMON. Appointed Minister to Turkey. He is an Oregon politician of the "Tom" Platt order, has large wealth, but no fitness whatever for office.

PLUMMER, JOHN F. Appointed Government Director of the Union Pacific Railway as a recognition of what the *Tribune* calls his "splendid work" for Harrison, as President of the Republican Dry-Goods Club of New York city: he circulated the forged quotations from the British press by cartloads, after they were known to be forgeries and had been withdrawn from circulation by the Home Market Club of Boston. The *Tribune* says, also, in explanation of his appointment, that he organized the Business Men's Campaign Committee, which "gave generous support to the party."

HARRISON, CARTER B. Appointed United States Marshal in Tennessee because he is the President's brother.

SCOTT, REV. DR. JOHN. Appointed to a small office in Washington Territory because he is the President's father-in-law.

SAUNDERS, ALVIN. Appointed a member of the Board of Registration and Election in Utah Territory, salary $5,000, because he is the father-in-law of the President's son.

MCKEE, FRANK. Appointed Deputy Collector of Customs in Washington Territory because he is a brother of the husband of the President's daughter.

A GOOD BEGINNING.

SECRETARY WINDOM and Assistant-Secretary Tichenor, one or both, are entitled to commendation by taxpayers not only for declaring, in a Treasury order to customs officers issued a few days ago, that a rule laid down in a recent court decision will be carried into practice, but for attaching to the circular order a literal copy of the text of the opinion of the court. To be sure, that decision does not interfere with the *present* effort of manufacturers and protectionists to increase customs taxes by executive order; but it is nevertheless encouraging to see the Treasury return to a practice stopped by Colonel Tichenor's predecessor, which stopping resulted in so much improper conduct and scandal.

We do not dwell upon this subject in order to criticise the doings either of Secretary Fairchild or of Assistant-Secretary Maynard, however great may be the irritation, indeed, the exasperation, which tariff reformers feel on discovering that, while they were toiling during the last Presidential election to reduce customs and surplus taxes, the Treasury was yielding to the intrigues of protectionists in a way to increase such taxes by Treasury order. Mr. Fairchild and Mr. Maynard have both retired from office, and what we now say in regard to their un-Democratic conduct in increasing customs taxes is said in order that tariff reformers may clearly see and appreciate an evil to be "jumped upon" (to use Bishop Potter's phrase), and may discover the tricks by which protectionists can so use the law for the collection of taxes ordered by Congress as to accomplish the levy of taxes which Congress has not ordered. We are dealing with tariff reform and the protection of taxpayers, not with Mr. Fairchild or Mr. Maynard. We are engaged in exhibiting a contrivance to nullify the will of Congress, invented by cunning manufacturers whose agent the Treasury Department consented to be. This protectionist device is so involved in the meshes of intricate customs law that explanation and iteration are needful to enable tariff reformers to comprehend it.

The evidence in our possession does not permit us to doubt that, as soon as the Supreme Court decision in the Langfeld hat-trimming case was made in March of last year, the silk-manufacturers injured thereby began intrigues at the Treasury Department to nullify the effect of the decision. That was accomplished by inducing the Treasury not to send to customs officers the text of the decision, but, on April 25, 1888, to issue instead a circular purporting to give the *effect* of the decision, while in fact giving a misleading interpretation. In that circular, signed by Mr. Maynard, he told the customs officers that the suit was decided in favor of the importers because the velvets in controversy were "commercially known as trimmings, and were generally used for that purpose in making or ornamenting hats, bonnets, or hoods." That was a cunning protectionist misstatement of the decision. The Supreme Court did not say that the velvets were "*commercially* known as trimmings." The language of the Court is: "There was no controversy in the evidence as to whether these velvet ribbons were or were not trimmings." Nothing was said about the commercial meaning of "trimmings," or whether the word had in 1883 a commercial as distinct from a popular meaning. Having adopted that cunning protectionist gloss, Mr. Maynard then told customs officers that, under the decision of the Court, they must thereafter find, in order to levy the lowest rate of 20 per cent. (1), that the fabric was "*commercially* known" in 1883 as "trimmings," and (2) "chiefly used in making or ornamenting hats, bonnets, and hoods." The result of that interpretation enabled the manufacturers to bring about the levy of 50 per cent. on what the Supreme Court had said should pay only 20 per cent. Tariff reformers may hesitate to believe that protectionists did or could accomplish such Treasury falsification of a decision by the Supreme Court, and to convince them we will present some of the facts which are before us.

On May 31, 1888, Collector Magone wrote to the Treasury Department describing an importation, and declaring that, under the decision of the Court in Langfeld's case, he had directed taxes to be levied thereon at 20 per cent. Naval-Officer Burt refused to liquidate the entry at that rate, and insisted that the legal rate should be 50 per cent., under the Treasury circular of the previous April. Here was a situation which required prompt treatment by protectionists. What happened? Assistant-Secretary Maynard wrote to Collector Magone as follows: "It has been represented to the Department, at a personal interview, by Mr. Cheney and other silk-manufacturers, that some doubts exist in the minds of the appraising officers at your port as to the scope of the Department's instructions of the 25th ultimo, addressed to the Collector at Philadelphia, *for the purpose* of carrying out the decision of the United States Supreme Court in the case of Langfeld against Hartranft, setting forth the general principles regarding the classification of imported hat materials and trimmings." And thereafter, on June 29, 1888, he wrote to those in New York who, in the controversy, represented the importers, "that, in view of the differences in opinions and practices which exist among the officers of the customs, the question as to the classification of such articles is to be submitted to the Board of United States Appraisers for their consideration at the conference to be held in New York on the second Monday of July next." The importers were invited to submit their views at that time. On July 7, 1888, the importers replied to Mr. Maynard that they could not "assent to the usefulness or propriety of subjecting the decision of the United States Supreme Court to any review for the purposes of administration, or otherwise, by a board *not recognized by law*"; but yet, if such a course was to be adopted by the Treasury, it would be "of course essential that the Board selected by the Department should be possessed officially of the text of the decision," and that the Board should be distinctly told by the Treasury that the Appraisers are "to be guided by the decisions of the United States Supreme Court *as officially reported*." In the reply by the Treasury, dated July 11, 1888, it was said: "The Conference already has the decision of the United States Supreme Court of the Langfeld case, which was promulgated in the Department decision of April 25, 1888." Here the intrigue, begun by the protectionists, is clearly disclosed. The importers asked that the text of the decision of the Court be submitted to the Conference, and not the interpretation "promulgated" by Mr. Maynard.

In answer, the importers, on July 12, 1888, wrote to the Department that the circular of April 25, 1888, "contains neither the language of the decision of the Supreme Court nor the text of the statute." They added that "it may be of interest to the Department to know that the omission of a copy of the decision in the Langfeld case from any instructions hitherto officially published by the Department, has been a constant matter of comment, if not embarrassment, to numerous customs officials who have had occasion to act upon it." On July 17, 1888, Mr. Maynard declined to furnish the customs officers with the text of the decision of the court, declaring that the circular of April 25, 1888, had been "promulgated for the purpose of carrying into effect the decision," and must be sufficient. The result was that the Conference, being constrained by Mr. Maynard's misleading interpretation of the decision, practically over-

ruled the Supreme Court, and ever since taxes on fabrics similar to those then in controversy have been levied at 50 per cent., which the Court distinctly said should only be 20 per cent.

This careful explanation of what was done in the Treasury during the last part of President Cleveland's term has been necessary to convince tariff-reformers that Secretary Windom deserves commendation by taxpayers for returning to the former Treasury practice and sending to customs officers the text of the decision of the courts.

WANTON REMOVALS OF DIPLOMATIC AGENTS.

WILL somebody tell us why either our diplomatic (or even our consular) officers should all be removed, or (which is the same thing) be constrained to resign, every four years? Why should Mr. Morton, for example, have been compelled to resign to Cleveland his office of Minister at Paris, or Mr. McLane to resign to Harrison? Why can we not have a diplomatic career as well as a military career? A law of Congress, not enacted till 1866, forbids a President to remove a naval or army officer excepting in pursuance of a sentence by a court-martial, and neither our liberties nor our welfare have thereby been endangered. Why cannot a law of Congress, of half-a-dozen lines, empower the President to transfer a diplomatic agent from one post to another, modifying his grade and rank, without sending his name to the Senate as a new appointment? Can anybody tell us?

When Lincoln came in, the country was in a peculiar condition, and a general removal of Buchanan's appointments may have been necessary. But the civil war is past. Why compel the displacement of Mr. Phelps at London, or why constrain hereafter the resignation of Mr. Robert Lincoln if he shall prove competent? And if secretaries are efficient and progressive, why displace them, instead of making them fit for promotion? Of course, Cleveland made, in the general rush for removals four years ago, a few bad selections for foreign missions. He should have removed those bad ones when their unfitness became apparent, but he did not, and those Harrison should displace. But should Harrison compel good and bad alike to resign? Apart from personal unfitness, we challenge everybody to give an adequate reason for changing any of our diplomatic or consular officers as Cleveland did and as Harrison is doing. There were no critical foreign questions in 1885, and there are none now in 1889, to justify, or even excuse, such changes. It is undiplomatic for the President to announce to foreign governments a change in party power at Washington. Van Buren, as Secretary of State, was condemned, and refused confirmation by the Senate as Minister to England, for formally authorizing Louis McLane to say as much to the British Minister of Foreign Affairs. If it were not permissible in that form, it should not be in any other form.

It is absurd to make diplomatic changes simply that diplomatic agents abroad may be more complaisant, in a social way, to members of one political party at home than to members of another. Diplomatic agents are not sent abroad to serve individuals in a social way, but to serve the State Department. They are not employed to dine their countrymen or be their commercial or social agents. No diplomatic European agent in Washington thus conducts himself towards his countrymen, or, if he does, his colleagues treat him as an outsider and an interloper. When he performs his work well at the State Department, he has done what he was commissioned to do. No European government selects a diplomatic agent for Washington merely because he is rich, and will take a big house, and will give promiscuous dinners. The day for that sort of business has gone by. A Secretary of State is not to be influenced in diplomacy by those outsiders in Washington who eat a foreign minister's dinners and do society talking. The same sort of qualities win nowadays in practising at foreign courts as in practising before a court of justice. Oftentimes, and generally, the most silent and unattractive men in society and at dinner-tables are they who best manage diplomatic questions. The client and master of a diplomatic agent are not his individual countrymen, but the Minister of Foreign Affairs. Popular speakers, ready writers of letters to their countrymen, and social celebrities, are sometimes the very worst of diplomatic agents. Why, then, when we have trained a good diplomatic or consular agent, do we not keep him in the business?

The *Tribune's* London Squire, writing a letter to New York containing hints to the new Republican Consul-General at London about the proper use of a "swallow-tail coat," has much to say about diplomatic and consular agents, and, among other things, these:

> "The functions of the Consul are primarily commercial; those of the Diplomatist are primarily diplomatic, and Talleyrand is responsible for the maxim that the most important work in diplomacy is often, if not always, social. Society is of no consequence to the Consul as Consul; to the Minister it is of great consequence, and he in return is of some consequence to society."

What are the secondary functions of American diplomatic and consular agents? The "Squire" probably will say the American Minister should be a social "swell." Why, and to what Government end? Since Talleyrand's day all has been changed. The discussion or decision of what diplomatic question pending at London during the last twenty years between England and our country could have been aided, in a way favorable to us, by the social consideration of our Minister outside of the British Foreign Office? When American citizens were imprisoned in Ireland as Irish suspects, was the dining-room or ball-room estimation of our Minister of any appreciable service to our incarcerated fellow-citizens? If the fishery question had been left at London (as it should have been), to be managed by Mr. Phelps, after his powerful notes written to the Earls of Rosebery and Iddesleigh, would a welcome at levees and drawing-rooms, state balls and state concerts have much aided our Minister so to present our "case" at the Foreign Office as to constrain assent? The "Squire" pricks the bubble when he says—

> "To go into the origin of things would carry us too far. Let us be content with them as they are; and as they are, it is to be said that the American, if such there be, who has social ambitions in England, has taken a step towards gratifying them when he has got a diplomatic appointment. It is diplomacy which opened the first door, which gave him the chance; a chance by which many and many worthy young men who sued for a secretaryship and got it, and thought they had got everything with it, have never profited. But that is their fault or their misfortune; not the fault of circumstances or of their position."

The truth is, that when men like the Squire think they are describing successful diplomatists, they are only describing smart Americans who swim well in London because floated, in the beginning, by a diplomatic appointment compelling their recognition. Men like Mr. Adams or Mr. Phelps would be great American diplomatic agents if the Squire's London society knew them not; and for that very reason they should not be removed or compelled to resign.

THE WICKED PROFESSORS.

THEY are at it again—those wicked professors who teach political economy in our colleges and universities. So we learn from the Detroit *Tribune* of May 14, which announces the damning fact under the following head lines:

WHAT MEANS THIS?

FREE TRADE IS TAUGHT AT MICHIGAN UNIVERSITY.

AND THIS DESPITE THE FACT THAT THE MAJORITY WHO ARE TAXED FOR IT ARE PROTECTIONISTS.

PROF. H. C. ADAMS OPPOSES THE AMERICAN SYSTEM.

HE STRENUOUSLY ADVOCATES THE CLEVELAND-MILLS DOCTRINES ON THE TARIFF QUESTION.

During the campaign last year we adverted to the fact that the Chicago platform had no defenders in our colleges, and that the Republican party, in tying itself to such a carcass, must soon lose its character as the representative of the higher intellectual life of the nation. What we said was strikingly verified, a few days before the close of the campaign, when Prof. Bowen of Harvard was invited to write a letter for a Republican meeting at Cambridge, and replied, in hot indignation, that he intended to vote for Cleveland and Thurman. Prof. Bowen said that he had not changed his views on the subject of protection, but that the present tariff was tyranny and not protection. "It is crushing our native industries," he said. "It is taxing nearly all the necessaries of life, and thereby driving our native workmen into numerous and riotous attempts to raise the rate of wages upon which they can no longer subsist. It taxes the artisan and common laborer in his necessary condiments, his daily food, in his clothing, tools, and materials; and this taxation must be kept up, at James G. Blaine's bidding, by the whole Republican party, in order to add a further surplus of about $100,000,000 a year to the many tons

of gold and silver which are already lying idle in the National Treasury." This testimony from the author of the well-known text-book entitled 'American Political Economy' was one of the severest blows that the Republican party received in the campaign, but it came too late to be effective.

The offence of Prof. H. C. Adams is akin to Prof. Bowen's in this, that he considers the question of present importance to be, "not whether a restrictive or a liberal commercial policy is correct in theory, but whether this country has reached a point in its industrial development where it can advantageously drop the restrictions which it has chosen thus far to retain." In a series of lectures to the students of Michigan University, he answers this question in the affirmative, giving a variety of reasons for his opinion. For example, he asks what classes of people are now benefited by the maintenance of a protective tariff, answering his own question in this way, according to the Detroit *Tribune*:

(a.) It is neither the laborer nor the holder of uninvested capital. The proof of this assertion is found in an analysis of industrial occupations in the United States.

(b.) Protection benefits the owners of real estate who, either by situation or peculiarity of product, can, through the medium of the tariff, maintain a monopoly of the home market. The "rental" upon mines, pine forests, and the like is increased by protective duties.

(c.) Protection benefits those who, granted monopoly of the home market by the tariff, are secured against competition at home by patents, or secure themselves against competition by means of trade combinations.

The mass of the American people lie outside these classes.

If a suitable measure of tariff reform were enacted, including the admission of all raw materials of manufacture free of duty, Prof. Adams holds that the purchasing power of wages, salaries, incomes from fixed investments, and self-supporting industries would be greatly increased, and that the United States would take her proper place among the nations of the world as a great commercial nation. These doctrines, the Detroit *Tribune* maintains, were "repudiated by the voters" last fall, and therefore ought not to be taught at the University of Michigan; or, at all events, "a fair presentation should be made of the economic theories adopted by a majority of the people," and "text-books in harmony with those theories should be in the hands of the students."

"We have to deal with a time," said Mr. Lowell in his Harvard Centennial Address, "when the belief seems to be spreading that truth not only can, but should be, settled by a show of hands rather than by a count of heads." The idea that nothing should be taught that is not approved by a majority of the people, presupposes that the majority are as wise as the professors in universities; whereas, if this were the case, there would be no need of universities. Everybody being competent to decide scientific questions, the higher institutions of learning might be shut up, and a great saving of expense effected. Moreover, we must remind our Detroit contemporary that there are no text-books in existence which teach the contrary of what Prof. Adams teaches. There are some that tell us that protection is a good thing for a new country, by way of starting up and diversifying industries. Prof. Bowen tells us these things in his 'American Political Economy'; Frederick List tells us the same—and we observe that Prof. Adams was particular to cite List as an authority on that side. Prof. Robert Ellis Thompson tells us the same. But none of them say that protection is a good permanent policy for a nation, for they all know that that would be sheer spoliation of the many for the benefit of the few. Nor do any of them advocate duties on the raw materials of manufacture. They all know that such duties are in violation of their own theory. But it is one of the grounds of bitter complaint against Prof. Adams that he teaches that duties on wool, lumber, minerals, and dyestuffs are opposed equally to the theories of protection and of free trade.

It would seem to be necessary, therefore, for the editor of the Detroit *Tribune* to prepare a text-book of the kind that he wants, in order to get the right doctrines before the students of Michigan University, for we assure him there are none in the English or in any modern European tongue. Such a book would embrace two leading theses: (1) that protection of copper, for example, is a good permanent policy for a nation, whether copper can be produced here more cheaply than abroad or not; (2) that duties on raw materials should be maintained, whether they tend to cripple manufactures or not. We should like to see such a text-book. We wonder that some far-seeing philanthropist like Mr. Joseph Wharton does not offer a prize for one.

LONDON PICTURES.

London, May 7, 1889.

The second summer exhibition at the New Gallery, which opened last week, is full of interesting work of different schools of painting: realists, impressionists, and idealists hang side by side on the walls, and if the proximity is often trying, the space always left around each work does much to promote harmony.

The excellence of the exhibition is due to the energy of the directors, who began the rounds of selection in the artists' studios at a very early date, and secured what seemed to them most desirable before the works were far advanced enough to have been promised either to the Grosvenor or to the Academy. To the artists the certainty of being advantageously hung was an opportunity not to be foregone. It is always a great risk sending to the Academy, where so many thousands of works are refused yearly for want of space, and where, if accepted, an outsider is liable to see his work skied or floored, and, at the best, fitted close beside four other works. There is no time in such a large collection to treat each artist's work with the consideration he claims for it, and hopes it will receive; the pictures must be packed closely together in order to admit as many as possible. The experience of those who sent last year to the Grosvenor was such as to free them from any sense of obligation to Sir Coutts Lindsay. Several prominent artists, after having been specially invited, had their works returned to them at the last minute with but scant courtesy; to the younger men, in less affluent circumstances, who relied on exhibiting their work, this treatment was a serious loss.

The exhibition this year owes its greatest attraction to the many and various works of Mr. G. F. Watts. His contributions are eight in number. These alone would be sufficient to satisfy the demands of a very large section of the public, for no artist appeals so completely to all classes and all tastes, perhaps, through the wide range of his subjects, the masterly execution, the breadth of treatment, and the great ideal qualities in his work. No. 1, a very forcible study of "A Wounded Heron," was painted at the age of twenty, and was the first picture Mr. Watts exhibited at the Royal Academy of 1837. It is a very realistic piece of painting, which indicates that it is only given to those who have approached nature with reverence to attain the power of creating the ideal so that it should be in sympathy with our modern requirements. "Fog off Corsica" and the "Sea-Ghost" are two subtle studies of mist, sky, and sea, very exquisite in delicate color, and full of opalescent light. In the "Sea-Ghost" an abandoned ship towers out of the mist with gruesome effect. A fine example of the artist's treatment of landscape is the "Sant' Agnese, Mentone," in which a village on the mountain-top meets the clouds. Here we note how Watts infuses a beauty all his own into the simplest subject without destroying truth to nature. In "Good Luck to your Fishing," No. 33, we see a roguish little Cupid hovering over a blue wave after having flung his line, watching patiently for the bite of a fish. The flesh painting here reminds one of Titian in its golden splendor and in the simple, clear modelling of the child's back. The wave, with its crest of foam, is also scintillating in light; the harmony of rich, warm blue, flesh color and creamy white is very delightful.

"Fata Morgana," the most important work shown here, dominates the West Gallery, and is without doubt one of Mr. Watts's masterpieces. It is a design of early date, entirely repainted last year with all the skill and beauty of flesh painting, all the magic of touch, acquired by long experience and practice. The "Fata Morgana" described in Boiardo's 'Orlando Innamorato' floats towards us, with hair sweeping backwards in a deep curve, just eluding the knight who, hot and impatient, seems just about to grasp her. The tangle of trees and creepers through which they seem to be swiftly moving, the draperies carried backwards by the air, the naked figure of the woman, so thoroughly ideal in color and drawing—every line in this design seems to carry out the intention. The picture is throughout full of the richest, deepest color. The knight's helmet gleams blue among the trees, his draperies are of scarlet and orange, and patches of bright blue distance show through the green leaves and brown tree trunks. The contrast between the fair flesh of the will-o'-the-wisp, her smiling, voluptuous face, and flying tawny locks, and the eager brown, manly head of the knight, is very telling.

In "Plutus's Wife," No. 184, we again have an example of flesh painting which is very characteristic and fine in color, but the design is less attractive; we should have liked to see more of the face, which is rolling among gorgeous pillows with wealth of golden hair dishevelled, holding golden coin in her clenched hand. The moral of the picture is obvious: we are convinced that the face would be discontented and unpleasant, but still we cannot help wishing she had visible features as a termination to her splendid throat.

Mr. Burne-Jones sends no picture this year;

it would be too much to expect even of him that he should be prepared to exhibit each year works of such importance and perfection of workmanship as those which hung on these walls last spring. His contributions are limited to drawings in silver-point in the Balcony—studies of the nude, of heads, and of draperies for his pictures, and one nearly life-size figure of Flora in blue and gold, very highly finished and extremely decorative in effect; both, qualities one has learned to expect of this master. Mr. Strudwick may be deemed the one successful follower of Burne-Jones (or rather of his method of painting, for his choice of subjects is very different, and he always does work on a small scale and with even greater finish). He is unfortunately lacking in spontaneity, and does not seem to receive all the appreciation his work deserves. "The Ramparts of God's House," No. 13, is a marvel of delicate execution. It represents souls arriving in heaven. They have the form of beautiful human beings; the Recording Angel sits, book in hand, questioning as they pass; other angels, with wings of great size and prismatic shimmer, holding different offices, are distributed about the ramparts. One angel, sword in hand, stands at the gate to receive the last arrival, who is climbing the steep stairs across which clouds are floating. Some of the angels are playing musical instruments, others are holding wreaths. In the background we see the happy souls sitting in God's house, which is covered with red tiles, with a belfry above in which two large bells are pealing. The principal incident in the foreground is the reception of the "one sinner who repenteth"—the only man in the picture. His nude figure is admirably drawn: he stands with downcast head in a despondent attitude, while beautiful angels are encouraging him to advance with great rejoicing. The tone of flesh is always pale and *matt* in Strudwick's heads; yet he gets an amount of drawing and modelling in each which is quite marvellous, considering their size. The draperies in countless folds recall Mantegna in their crispness and perfection of execution. They are also painted over gold, which adds to their richness of color. The flowers and all accessories are always so right in key of color that there is never any rude transition from ideal to real.

In Mr. Spencer Stanhope's "In Memoriam," No. 88, there is pathetic sentiment and a charming fresco-like quality of color. The girl, who sits at a cemetery gate clad in red, blue and white, holding a dead bird in her hand, looks full of sorrow. It is to be regretted that the head is so wanting in drawing and modelling. The background, an autumnal aspect of the old city walls by the Jews' Burial-ground, Florence, is picturesque and well rendered; as the walls are now being destroyed by removal, the picture has the additional interest of a record.

W. B. Richmond's "Death of Ulysses" is very impressive in composition, and in the solemn chord of color he has struck so suitable to the subject; but by reason of the subject—the futility of human life, the inevitable decrepitude which falls on the strongest—it is not likely to be a popular work. The architectural arrangement of the columns, partly gold, partly stone, leading up to the couch beneath a semicircular window, through which one sees reflections of the setting sun in the sky, is well imagined. As the darkness within, contrasted with the light without, the two aged figures of Ulysses and Penelope look abandoned, and fill one with compassion, so that the picture tells its story, only it is a very sad one. The portrait of Mrs. Buxton, by the same artist, No. 74, is very fine. The color is full and dignified, and we prefer the simple treatment of this charming woman's portrait to his more elaborate attempt, No. 207, "Portrait of the Countess Grosvenor." The evident effort to keep everything light has spoiled the general effect, and the work looks pale and washy, although a careful observer will note with what care the landscape through the circular window surrounding the head is painted, and how well the draperies are arranged and finished. With all this, the picture recalls the obsolete keepsake style of portrait.

Mr. John Sargent's "Ellen Terry as *Lady Macbeth*" will certainly furnish more conversation than any other picture this season. Long before the New Gallery opened, lovers of art had flocked to his studio to gaze upon it, and try to form some opinion concerning its merits. It had been shown at the Dramatic Club, also, so that many had the advantage of being prepared for its remarkable qualities. The work of Mr. Sargent is always very striking because of its sincerity in the first place, and then because he possesses the audacity of trying new effects. His figures have always a living quality about them which distinguishes them from among the conventional portraits that make exhibition walls so dull. In this instance Mr. Sargent has had a splendid opportunity both in subject and costume. *Lady Macbeth* stands before us in a magnificent blue-green dress, covered with beetles' wings, closely fitting the figure, but falling in folds from below the waist. Her long hanging sleeves lined with green sweep the ground; her thick red hair, in two heavy plaits bound with gold, hangs on either side of her. She is holding above her head, with upraised arm, the crown; her eyes, which are fixed on it, seem to gloat triumphantly on it, as with satisfied ambition tempered with a gleam of horror at the remembrance of the crime. The figure, thus clad in strong peacock blue and green, sparkling with the gold of the beetles' wings, stands against a background of bright dark blue. The scheme of color suggests a Limoges enamel in its vividness. The background, however, does not keep its place, but obtrudes itself with a pertinacity which recalls the vulgarity of Reckitt's advertisement. The face, too, is painted with all the make-up as for the footlights, and Miss Terry is not a very skilful artist on her own face. The color is ghastly. With red, half-opened lips, frowning brows, and pale glassy eyes, beneath which black dabs mark too violently the outer corners, the face looks like a mask. On the stage, the effect and light alter everything; but one regrets that the artist should have faithfully rendered in cruel studio daylight this aspect of Miss Terry's fine, expressive face. The painting of the dress is very admirable in touch, and has a surprising effect of facility: it is rather an effort of the school to which Sargent belongs to appear to do their work without effort.

Another important contributor is Alma-Tadema, whose delightful little picture of two girls reading a papyrus, "A Favorite Author," No. 8, contains the usual careful painting of marble and draperies in harmonious colors, with a view from an open window of trees and a sunlit palace and blue sky. The figures, on a small scale, are admirably drawn in natural attitudes. This is the kind of picture Mr. Tadema is most successful in, although the three portraits he exhibits are also very fine—thoroughly studied and striking as likenesses. Mrs. Alma-Tadema sends two pictures, also very remarkable in execution, almost worthy of some old Dutch master in dexterous rendering of textures and still life. "A Summer Sabbath," No. 19, represents a girl asleep over her Bible; the drowsiness of the day is expressed in every detail. In "Soon Ready," No. 98, we see a little girl with her back towards us holding up her hand, having her dress laced by a maid kneeling beside her, while her grandmother, in walking-dress at the door, is waiting for her. A wardrobe, open and full of costumes, fills the background, and gives great scope to Mrs. Tadema's power of rendering stuffs and embroidery; the woodwork, too, is perfectly painted. Another woman artist, whose work is very attractive because of its force and gift of laying on color, is Mrs. Swynnerton. There is such a healthy feeling, as of country air, in her work, that one is arrested by it; and although she does not seem to possess the faculty of expressing beauty in the heads she paints, her sincerity wins us, and we do not feel much inclined to insist on the want of proportion in the sizes of the figures in the "Story of a Princess," or in the manner in which the full-length portrait of Miss L. Wilkinson seems to grow out of the large blue-bells and grass around her, without any suggestion of feet.

Besides a number of studies and portraits in silver-point in the Balcony, very remarkable for purity of line and firm drawing, Professor Alphonse Legros sends two large landscapes, refined in color but rather gray and wanting in interest. Mr. J. M. Swan's pictures are attracting a great deal of attention this year at all the exhibitions, and to this one he has sent "Polar Bears Swimming."

> "We were the first that ever burst
> Into that silent sea."

The movement of swimming is perfectly expressed. The bears, in a phalanx, are invading a cold, iceberg-surrounded gulf; all in the picture is white, and yet it is forcible and full of color. Mr. Arthur Lemon, in No. 97, "A Mid-Day Bath," sends an impressionist picture of great merit—a small child with no clothing, save a very much torn straw hat, in full sunlight, riding one horse into the sea and dragging in another. The horses are nearly up to the knees in water, and are naturally restive under the circumstances. The whole picture is full of sunlight, and the drawing throughout and movement are masterly. We only regret an unnecessary degree of realism in the little boy, whose body is wanting in beauty of form.

Mr. La Thangue, another impressionist sends an immense canvas on which is the portrait of a lady in full evening dress sitting by the fire—painted by lamplight. It has an astonishingly real effect, but is not agreeable as a work of art. Signor Giovanni Costa, a Roman painter of great distinction, has several interesting landscapes, and a figure he calls Virginia de Monti, a girl carrying on her head a basket of weeds. There is too much similarity in the color of earth and of the flesh to make it a pleasing work.

The exhibition is very rich in excellent landscapes of the English school. J. W. North's "Winter Passing Away" is one of the truest and most poetic renderings of the first breath of spring over the still brown earth and leafless trees. Mr. Alfred Parsons's "On Mendip" has a field of daffodils just bursting into bloom in the foreground, and beyond a gray road with cottages the distance is steeped in a blue haze with daffodil sky above. Mr. Boughton's "May Morning in the Isle of Wight" is a green dip between the cliffs: one solitary straggling tree to the right, and, beyond, gray-blue sea and sky meeting in the horizon. Mr. Parsons's "A Backwater," No. 143, is also full of charm; he seems to have given up his rather impressionist manner of painting trees, and to have found an infinitely better method.

A very interesting little piece is the portrait of G. F. Watts at work on his colossal statue, "Vital Energy," by Philip Burne-Jones. The sculptor's studio is painted with great skill and patient fidelity of detail, and the great artist stands in holland pinafore in front of his statue, in an attitude which those who know him will recognize as peculiarly his own while discoursing on his work. "Lord Rayleigh at Work in his Laboratory," also by Burne-Jones, shows that this young painter has struck out in a line he makes his own with great success.

The sculpture gallery has but few works of note. We observe the "Clytie" of Watts, which we have seen before at the Academy; a bronze bust portrait by Onslow Ford; Boehm's Sir H. Layard and John Bright; and less interesting though more ambitious works.

A FEW ANCIENT SITES.—I.

Niffer Mounds, Turkey, March 15, 1889.

One of the few points on the Euphrates which can be found on the maps, and which I shall therefore choose as the point of departure for the identification of my first site, is Meskene, the place to which the enterprising Midhat Pasha succeeded in navigating the Euphrates with steamboats a few years since. Meskene is a Turkish military post (not a town or village), situated at the point where the present caravan route from Aleppo to Bagdad enters the Euphrates valley, a little south of east from the former city, and just below the thirty-sixth parallel of north latitude. Three-quarters of an hour below this are the interesting Arabic ruins given by Kiepert as Kala'at Balis (I could only hear the name Old Meskene) and identified with Barbalissus. Below this the river approaches the western plateau, and for several miles almost washes the foot of the great white cliffs, two or three hundred feet high. This plateau is a plain of gypsum, extending backward into the desert, through which the Euphrates has worn its channel. At the end of these cliffs, on a promontory of the plateau, where the plateau itself becomes lower, and the river bed widens into a broad fertile plain, about nine miles below Meskene, stand the ruins called Kala'at Dibse.

The ruins now visible, like almost all the ruins of this part of the country, are of mediæval Arabic date, of brick, and rather insignificant; but the name and the site are suggestive of something more important. Sachau, in his 'Reise durch Mesopotamien und Syrien,' seeks to identify El Hammam, a day and a half further eastward, with Tiphsah of the Bible, the Thapsacus of Greek and Roman writers, the most important city of this section of the Euphrates valley. So far as I know, he had no other ground for this identification than the certainty that Thapsacus must have been in this neighborhood, and the fact that there were ruins at El Hammam. He was unable to visit the latter place. We spent a night there. There is neither village nor military station, and we encamped in the plain, close to the tamarisk jungle that borders the Euphrates at this point. Fires and armed soldiers, our escort, guarded us from the lions which every one declares to abound in the jungles of the upper Euphrates, but of which we could never find any traces, beyond stories of death and awful mutilation retailed by the native Arabs.

The ruins of El Hammam are insignificant, situated on a low plateau, a couple of miles from the river. The name, "the hot baths," suggests a watering place or health resort, and I am inclined to suppose that, like so many other sites bearing the same name, it was a small place, owing its existence merely to the presence of warm springs, an abundance of which are found in the same geological formation further down the river. On the other hand, the name Dibse seems to perpetuate that of Tiphsah. The site of Dibse, also, commanding a fertile plain, and backed by a narrow defile along the river to the northeast, is favorable for the erection of an important city. Moreover, this site would permit the ready communication with the west which historical references seem to require for Tiphsahor Thapsacus. The fact that the visible ruins are of late date does not militate against this argument from the name and situation, for many of these ancient sites were occupied by successive possessors of the country, for the reasons which gave them their original importance, until a comparatively recent period.

Sachau also failed to visit Halebiyeh, only seeing it from the less important Zelebiyeh on the eastern bank of the river. His description is therefore necessarily inaccurate. The place lies on the west bank of the Euphrates, some thirty miles northwest of Deir, at about 35° 30′ north latitude, and 40° east longitude. It is situated in a side valley of El Hamme, a trachite ridge, through which the Euphrates forces its way by a narrow gorge. As the present caravan route does not follow the river at this point, we were compelled to make a considerable détour in order to visit it. This deflection of the caravan route is probably the reason why it has not been more fully described hitherto. The walls still stand, in the form of a triangle, the shortest side parallel with the river, which here runs due north and south. The apex of the triangle is a very steep, isolated hill, separated from the ridge beyond by a deep valley. The total circumference of the walls cannot be more than a mile and a quarter, and is probably somewhat less. They are still well preserved all around, although built of gypsum, which decomposes very rapidly. The stone was laid in massive, rectangular, oblong blocks. The walls themselves average thirty to forty feet in height, and are strengthened by massive towers every 150 to 200 feet.

Towards the top of the hill on the north, half within and half without the wall, on a bluff, was a large, fine building, perhaps once the official residence of the governor or commander. Two of the original three stories are still preserved, domed within with brick, as were also the rooms in the gate and wall towers, in what may be called an early Byzantine style. Opposite one another in the lower part of the city, on the northern and southern sides, were the two main gates. There was a smaller gate in the southern wall at the foot of the acropolis, and two more on the river front. Between the main gates ran a straight street paved with gypsum. To the west of this were troughs and columns, marking the remains of what seemed to have been a market place, and, hard by, two buildings with apses, exactly oriented, which, so far as the visible remains were concerned, might have been churches. In one of these Mr. Field found a small piece of moulding in what, for forgetfulness of the proper technical term, I shall venture to describe as a square dog's-tooth pattern. This was the only ornamentation found anywhere. On the eastern side of the street, towards the river wall, were found a couple of capitals, one of them Corinthian, of a late, transitional style. Otherwise, the space within the walls below the acropolis was bare of ruins or remains above the surface. At the acropolis the southern wall seemed to have been destroyed, and then rebuilt with fragments of trachite, such as are scattered everywhere about the city. Here there were also remains of a building with underground vaults in brick of a later date than the buildings described above. The valleys about the town were almost ravines, utterly sterile, and thickly covered with fragments of trachite. On all sides were tombs, some cut in the rock and some built upon it, the latter not unlike the Palmyrene tombs in style, but ruder. To the south were traces of two rough walls of trachite across the valley; and a mile below, where the river rounds the last point of the Hamme ridge, a gypsum wall or fort, commanding both road and river, as though danger were especially apprehended from the south.

What the ancient name and history of the place were is not known, I believe. I should suppose it to have been a frontier post of the Roman Empire in the fourth or fifth century A. D., and afterwards to have been occupied by the Arabs, the present acropolis dating from the latter period. It never could have accommodated a large population, and the character of the region in which it is situated shows that that was not the purpose for which it was built. On the other hand, it must have been a strong fortress, and well calculated to hold the line of the Euphrates against an invader, especially when supported by the smaller fortress of Zelebiyeh on the heights opposite; for the Hamme gorge is a natural point of strategic importance.

Three and a half days beyond Halebiyeh, and two days beyond the present town of Deir, the most important place between Aleppo and Bagdad, in north latitude 34° 45′ and longitude 41° east, lies another ruin of somewhat similar character, now called Kan Kalessi, or Bloody Castle. This has been visited, and, I think, described by other explorers. It is situated on the bluffs of the gypsum plateau, close to the west bank of the Euphrates, and not far from the modern Turkish barracks, or post khan, of Es-Salihiyeh. It was built in a rectangular shape, so far as the curving bluffs allowed, the citadel standing on a point of rock jutting out into the valley on the northeast. The southwestern wall, on the side towards the plateau, was about half a mile long, running from ravine to ravine, and supported by eleven towers. This wall was ten feet in breadth, and still stands to the height of fifteen feet. The central gate towers, very massive structures, rise thirty or forty feet, the more northerly having the second story almost intact. Everything, including the foundations at least of the houses, was built of the same crumbling gypsum as at Halebiyeh. The streets, which are regularly laid out at right angles with one another, and are easily traceable between the foundations of the houses, were some fifty feet broad. Outside of the walls are a few ruins, some of them quite massive, which may have been tombs. The whole gives the impression of a Roman town, designed to hold the Arabs in check, like the Turkish town of Deir at the present day.

I am writing at a distance from all books of reference, thrown on the resources of a memory not over-good, and of a knowledge of the later history of the Euphrates valley not so extensive as I could desire. It may be that some of your readers can supply my defective knowledge, and identify satisfactorily these two sites, Halebiyeh and Kan Kalessi.

John P. Peters.

SMOLLETT IN SEARCH OF HEALTH.—I.

Nice, January 21, 1889.

The charms of 'A Sentimental Journey' and Sterne's jibes and jests at Smelfungus have

thrown undue discredit on Smollett's 'Travels,' so that they are rarely read nowadays, except by the student of literary history. They deserve, however, a different fate; and on reading them for the third time here in the place which produced them, where poor Smollett spent eighteen months with a hope of curing a pulmonary affection and of gaining a few more years of life, one cannot but remark the amount of information and the accuracy of observation, and feel that some parts are as good as his novels.

Smollett had been in France once before, in 1748, just after he had finished 'Roderick Random.' It was the year of the Peace of Aix-la-Chapelle and of the publication of Montesquieu's 'Esprit des Lois.' He travelled with his friend and biographer, Dr. Moore, the author of 'Zeluco,' and met in Paris Mark Akenside, who in some way offended him, and whom he satirized as the Doctor in 'Peregrine Pickle,' in which novel, too, he utilized most of his travelling adventures.

In 1763 Smollett started again for France—for the Peace of Paris, just signed, which gave Canada to Great Britain, allowed the English once more to travel on the Continent—accompanied by his wife and two young ladies who had been put under her care. He was broken down in health, and worn out by his struggles as a political journalist in editing the *Briton*, which had brought him more blows than pence. His advocacy of Lord Bute had made him quarrel with his old friend Wilkes, and he felt that he had been treated with ingratitude in being thrown over by Bute, when he seemed to be of no more use, although he saw his patron forced to resign a few months afterwards. He was, moreover, disconsolate because he had lost his daughter and only child. As he himself says, he "was traduced by malice, persecuted by faction, abandoned by false patrons, and overwhelmed by the sense of a domestic calamity which it was not in the power of fortune to repair." All this, added to irritable nerves—"systema nervosum maxime irritabile," as he expresses it in his diagnosis of his case—made the first part of his journey anything but pleasant. He was constantly disputing with innkeepers and postillions; was annoyed by bad lodgings, high prices, and extortions, want of respect—or what seemed to him so—at the inns, and the lack of English comforts and conveniences. He could not, or would not, eat at noon, which was then the usual French dinner hour, especially at post stations and country inns, though he admitted that the meals were good and cheap; but must have his breakfast of tea and toast, and therefore ate a cold lunch in the carriage. When he did dine at an inn, his English habits, added to his ill health, would not suffer him to eat at the ordinary, and compelled him to pay high charges for meals served in his own room.

Sometimes he quarrelled with the wrong man, or indulged in a useless and unprofitable fit of anger; as, for example, at Montpellier, where he wished to take the advice of the great physician of the place, but, having heard things "against his character and personal deportment, did not wish to converse with him personally, and consulted him on paper." He wrote out a statement of his case in the medical Latin which English doctors then prided themselves on using, and felt so annoyed and insulted at the reply being in French, that he could not resist the temptation of paying an additional fee in order to tell his colleague—this time in French—that he had not read or could not read his original diagnosis. While the peevish disposition in which Smollett was at that time, certainly affected his views of things, his account of what he saw is by no means—as Sterne said—"nothing but the account of his miserable feelings"; nor is it at all "dreary reading," in the words of his last biographer, Mr. David Hannay. It is impossible to sympathize with the petty mishaps which travellers experience, so soon forgotten nowadays, but which must have been so serious a hundred years ago that it seems strange that so many English—especially with large families—made the grand tour. But Smollett makes you laugh with him as well as laugh at him, and sometimes he laughs at himself and at his own little miseries. If he is severe on the French for customs which he does not like and for their bad government, we must remember that he wrote at a time when no Protestant traveller, dying in France, could receive legal burial, and his friends were obliged with their own hands to bury him themselves in some concealed place—as happened to an acquaintance of Young at Montpellier—and his whole property was confiscated to the Crown by the *droit d'aubaine*. But Smollett gives fully as much space to showing that the French are in many points superior to the English. He is, it is true, sometimes coarse, for he never quite got rid of a certain coarseness of nature; and coarseness of language was not stigmatized as vulgar by our ancestors of the last century. Good society still tells anecdotes of the same kind as then, but the language is veiled, and the coarseness is not so apparent.

After some months' stay at Nice, Smollett took a journey to Florence and Rome. As far as Genoa he went by sea in a felucca:

"Indeed," he says, "there is no other way of going, unless you take a mule and clamber along the mountains at the rate of two miles an hour, and at the risk of breaking your neck every minute. The Apennine Mountains, which are no other than a continuation of the Maritime Alps, form an almost continued precipice from Villefranche to Lerici, which is about forty-five miles on the other side of Genoa; and as they are generally washed by the sea, there is no beach or shore; consequently the road is carried along the face of the rocks, except at certain small intervals which are occupied by towns and villages. But as there is a road for mules and foot-passengers, it might certainly be enlarged and improved so as to render it practicable by chaises and other wheel-carriages, and a toll might be exacted which in a little time would defray the expense; for certainly no person who travels to Italy from England, Holland, France, or Spain would make a troublesome circuit to pass the Alps by the way of Savoy and Piedmont, if he could have the convenience of going post by the way of Aix, Antibes, and Nice along the side of the Mediterranean and through the Riviera of Genoa, which from the sea affords the most agreeable and amazing prospect I ever beheld. . . . The truth is, the nobility of Genoa (who are all merchants), from a low, selfish, and absurd policy, take all methods to keep their subjects of the Riviera in poverty and dependence. With this view they carefully avoid all steps towards rendering that country accessible by land, and at the same time discourage their trade by sea lest it should interfere with the commerce of their capital, in which they themselves are personally concerned."

It was a proof of Smollett's clear head and practical common-sense that he was able to see the value of the Cornice Road before the birth of Napoleon, who began it. A hundred years, too, before the enforced visit of Lord Brougham, he

"lay at Cannes, a neat village, charmingly situated on the beach of the Mediterranean, exactly opposite to the Isles Marguerites, where state prisoners are confined. As there are some good houses in this place, I would rather live here for the sake of the mild climate than either at Antibes or Nice. Here you are not cooped up within walls, nor crowded with soldiers and people, but are already in the country, enjoy a fine air, and are well supplied with all sorts of fish."

A felucca was an open boat rowed by ten or twelve stout men, large enough to take in a carriage, and with an awning near the stern to protect the passengers from rain and sun. One person could lie comfortably on a mattress between the seats. The price of passage between Nice and Genoa for a single passenger was then a louis d'or; but for 4 louis it was possible to hire a whole felucca, and make it a condition to be put on shore every evening. "By paying a little more you may hire it at so much per day, and in that case go on shore as often and stay as long as you please. This is the method I should take were I to make the voyage again; for I am persuaded I should find it very near as cheap and much more agreeable than any other."

At that time the ports of the Riviera were so crowded with boats, manned, equipped, and ready to start for a distant place at a moment's notice, that it was apparently as easy then to hire a felucca for a long journey as a cab nowadays for an afternoon's drive. These boats hugged the coast so closely that there was really little danger from storms and weather; the great danger was from the Barbary pirates, as Smollett had already said in his 'History of England.'

"All the Powers that border on the Mediterranean, except France and Tuscany, are at perpetual war with the Moors of Barbary, and for that reason obliged to employ foreign ships for the transportation of their merchandise. This employment naturally devolves to those nations whose vessels are in no danger from the depredations of the Barbarians, namely, the subjects of the maritime Powers who, for this puny advantage, not only tolerate the piratical States of Barbary, but even supply them with arms and ammunition, solicit their passes, and purchase their forbearance with annual presents, which are, in effect, equivalent to a tribute."

Smollett took a gondola—smaller than a felucca—rowed by four men, for which he paid more than for a felucca; with the idea that it would be quicker. He landed at Monaco, and, as one of the party was ill and the weather was bad, passed the night at San Remo, and

"was conducted to the Poste, which our gondoliere assured us was the best auberge in the whole Riviera of Genoa. We ascended by a dark, narrow, steep stair into a kind of public room with a long table and benches, so dirty and miserable that it would disgrace the worst hedge ale-house in England. . . . We were obliged to sit in the common room among watermen and muleteers. At length the landlord arrived, and gave us to understand that he could accommodate us with chambers. In that where I lay there was just room for two beds, without curtains or bedstead, an old rotten table, covered with dried figs, and a couple of crazy chairs. The walls had been once whitewashed, but were now hung with cobwebs, and speckled with dirt of all sorts, and I believe the brick floor had not been swept for half a century. We supped in an outer room suitable in all respects to the chamber, and fared villanously. The provision was very ill-dressed, and served up in the most slovenly manner. You must not expect cleanliness or conveniency of any kind in this country. For this accommodation I paid as much as if I had been elegantly entertained in the best auberge of France or Italy."

On returning, stress of weather obliged him to stop again at San Remo, when he says: "At length we arrived at our old lodgings at San Remo, which we found whitewashed and in great order. We supped pretty comfortably; slept well, and had no reason to complain of imposition in paying the bill." The next day the wind was so high that Smollett was obliged to stay twenty-four hours longer, which was, on the whole, fortunate, as he became interested in San Remo, then a small republic subject to Genoa; and his friend "luckily found two

acquaintances in the place—one a Franciscan monk, a jolly fellow, and the other a *maestro di capella*, who sent a spinet to the inn, and entertained us agreeably with his voice and performance, in both of which accomplishments he excelled. The padre was very good-humored, and favored us with a letter of recommendation to a friend of his, a professor in the University of Pisa. You would laugh to see the hyperbolical terms in which he mentioned your humble servant; but Italy is the native country of hyperbole."

He found the women of San Remo "much more handsome and better tempered than those of Provence. They have in general good eyes, with open ingenuous countenances. Their dress, though remarkable, I cannot describe; but upon the whole, they put me in mind of some portraits I have seen representing the females of Georgia and Mingrelia." This supposed resemblance came probably from the fact that the women of the Riviera then generally covered their heads and shoulders with squares of cotton stuff, printed in bright colors, with Eastern designs; this garment is known as the *mezzaro*, and is still sometimes used in small villages on such occasions as the Christmas midnight mass. Most of them have, however, been bought up by antiquaries, and are used for draping walls. The designs of some of the earlier pieces are Persian or East Indian; but I have seen one or two pieces bearing the Peruvian arms, showing that there must have been an export of them to South America.

Starting out from San Remo, the wind being still unfavorable, though it had abated, they were rowed along the coast, without landing, as far as Noli, thus seeing in one day most of the best scenery of the Riviera. The olive oil of Oneglia enjoyed then the same reputation as now; Albenga, which is now surrounded by market gardens, was then noted for producing great quantities of hemp. Finale was celebrated for the most agreeable apples Smollett had ever tasted, called "pome carli." There is a long passage on the dangers of the Capo di Noli, chiefly known nowadays for its picturesque beauty and as the habitat of a few plants which grow nowhere else in the world. At Noli itself, "the auberge was such as to make us regret even the inn we had left at San Remo. After a very odd kind of supper, which I cannot pretend to describe, we retired to our repose." But sleep was driven away by bugs, against which there is an outburst.

"One would imagine that in a mountainous country like this there should be plenty of goats; and, indeed, we saw many flocks of them feeding among the rocks; yet we could not procure half-a-pint of milk for our tea if we had given the weight of it in gold. The people here have no idea of using milk, and when you ask them for it they stand gaping, with a look of foolish surprise which is exceedingly provoking. It is amazing that instinct does not teach the peasants to feed their children with goats' milk, so much more nourishing and agreeable than the wretched sustenance on which they live."

Smollett travelled in the same way to Genoa, where he put up at the Hôtel Croix de Malte, of which he speaks in enthusiastic terms, which are justified even to the present day. He continues:

"It is not without reason that Genoa is called *La Superba*. The city itself is very stately; and the nobles are very proud. Some few of them may be proud of their wealth, but in general their fortunes are very small. . . . They live with great parsimony in their families, and wear nothing but black in public, so that their expenses are but small. If a Genoese nobleman gives an entertainment once a quarter, he is said to live upon the fragments all the rest of the year. I was told that one of them lately treated his friends, and left the entertainment to the care of his son, who ordered a dish of fish that cost a zechine, which is equal to about ten shillings sterling. The old gentleman no sooner saw it appear on the table than, unable to suppress his concern, he burst into tears and exclaimed, '*Ah, figliuolo indegno! Siamo in rovina! Siamo in precipizio!*'

"I think the pride or ostentation of the Italians in general takes a more laudable turn than that of other nations. A Frenchman lays out his whole revenue upon tawdry suits of cloaths, or in furnishing a magnificent repast of fifty or a hundred dishes, one-half of which are not eatable nor intended to be eaten. His wardrobe goes to the *fripier*, his dishes to the dogs, and himself to the devil; and after his decease no vestige of him remains. A Genoese, on the other hand, keeps himself and his family at short allowance, that he may save money to build palaces and churches which remain to after ages so many monuments of his taste, piety, and munificence, and in the meantime give employment and bread to the poor and industrious. . . . The two streets called Strada Balbi and Strada Nuova are continued double ranges of palaces adorned with gardens and fountains; but their being painted on the outside has, in my opinion, a poor effect."

E. S.

Correspondence.

POLITICAL GENTLEMEN.

To the Editor of The Nation:

Sir: Your article under the above heading has a much deeper significance than you have assigned to it. It is a melancholy fact that in our State Legislatures there is no place for "gentlemen."

Men entitled to that name, in its highest sense, inevitably lose in reputation, if not in character, by going there, and the species is steadily becoming rarer within those precincts. The explanation of the fact, if we consider the system of doing business, is the simplest thing in the world. Every proposition, of whatever name or nature, has to be referred to a committee, and all, good, bad, or indifferent, stand upon a precisely equal footing. No member of these committees has any direct interest in promoting the welfare of the State, and, however great his indirect interest may be, he is only a local representative, and is regarded by his fellow-members as impertinent if he pushes the general interest at the expense of other and local schemes. Moreover, let him work ever so hard and even successfully, he can get no credit, because he is only one member of an anonymous committee, which is again lost in an anonymous house. On the other hand, he is certain to get his full share of blame for any job that is perpetrated. "Trading" is the very basis of all legislation, and the highest and most virtuous scheme of public interest is just as dependent upon it as the lowest job of corporate franchise. What you contemptuously call a "deal" is a necessity of the case.

I was talking the other day with a gentleman who was professionally employed in procuring the passage of an act in our Legislature, and who expressed his astonishment at the decline of moral tone in that body as compared with twenty years ago. I believe the Massachusetts Legislature has not yet reached the level of that of New York, but the downward pace is fearfully rapid.

What is the remedy? Precisely that which I have so long fought for in the case of Congress—publicity and responsibility. The chief executive officers should have places in the Legislature and take the guidance and organization of business. Questions of public interest should thus be given precedence over private jobs. The public business should be dragged out of the secrecy of committee-rooms into the light of open debate. Every member should thus have direct credit for his own good work, and blame for his own bad, and for none other. It is to me a matter of increasing wonder that no man can be found in public life ambitious and clear-sighted and courageous enough to take the stump for his own hand, to explain to the people of the State how rotten is the system of their capitols and state-houses, and to point out to them the road to reform. There is no other chance of political advancement at all to be compared with this.

G. B.

THE UTAH APPOINTMENTS.

To the Editor of The Nation:

Sir: A fresh illustration of President Harrison's disregard for his pledges is furnished by his recent action in appointing officials for Utah. The *Salt Lake Tribune*, the leading Anti-Mormon and Republican organ of the Territory, says:

"The news of the appointment of the Hon. A. L. Thomas, Governor, and Col. E. Sells, Secretary of Utah, was a surprise all around, No reason on this side of the continent called for the retirement of either Governor West or Secretary Hall. They have both filled their offices to the perfect satisfaction of men of all parties who are real citizens of the United States in Utah, and it was expected that both would be left in their places."

Is this the boasted Republican policy of "Home Rule for the Territories" which we have heard so much about? True to its instinct, the *Independent* highly commends this action, in the face of the fact that it quoted Cleveland's government of some of the Territories from the outside as proof of his unfitness to be President.

W.

A CORRECTION.

To the Editor of The Nation:

Sir: In my letter on "Prehistoric Sicily" (*Nation*, No. 1241), fourth paragraph, I am printed as writing "calcareous limestone," when I intended putting calcareous *sandstone*, as will be suggested to many readers, the former term meaning nothing and conveying no idea of the relation of the work to the material, but a very distinct one of the ignorance of the writer. The fault was unquestionably my own.

While writing, may I be permitted to notice the views of Mr. Linton, criticised in the same number, as to the merits of English wood-engraving, in their contrast with those of a higher authority, M. Hébert, Director of the Académie Française at Rome, one of the most thoughtful of modern French painters, and perhaps the best representative still living of the great poetic French school of art? I had the pleasure of showing him a set, so far as complete, of the engravings of Cole for the Old Masters series of the *Century*, and the old man said, after looking them over, that he had never seen such work on wood, and did not suppose wood-engraving to be capable of it. Of several of the series his admiration was enthusiastic, and he said several times of the engraver, "C'est un vrai artiste."

Yours truly, W. J. Stillman.

Athens, April 28, 1889.

"TRY *AND*" FOR "TRY *TO*," AND "*SOMEBODY'S ELSE*" FOR "*SOMEBODY ELSE'S*."

To the Editor of The Nation:

Sir: The compliment we most like to pay our intellectual growth is to vaunt our diffused recognition of specialists, and our acceptance of the mission to keep up with their latest conclusions. Yet there is not lacking abundant

evidence both that the "general reader" still rests secure in the original conviction that prejudiced preference is canonical usage, and that many positions of high authority are still held by teachers who have not so much as heard whether there be any ascertained grounds of valid opinion, either in the results of special students or in the phenomena open to historical investigation. How far such teachers deserve rebuke depends upon the attitude they assume. *M. Jourdain* needed to offer no apology for speaking prose, even when he had discovered the fact; but a gratuitous attempt at poetry would have entitled him to no immunity. So, in the multiplying exactions of subdivided linguistics, an eminent phonologist is pardoned for not knowing the history of such locutions as form the subject of this letter; but he must be disparaged for venturing to pronounce on them without instructing himself from original sources and preceding inquiries, and positively censured for the lazy impertinence of false doctrine confidently urged upon a trustful audience. In spite of the pretensions of some trustees and some programmes, it would be easy to illustrate, with full specifications, the last category; but perhaps it is more useful to correct some of the blunders than to enumerate all the blunderers, even if that were practicable.

For the references cited below, I am indebted to the only man who could have furnished them—Dr. Fitzedward Hall.

(1.) The usage typified by "try *and* ——" for "try *to* ——" occurs at least as early as 1526 (Tindale: "Peter began and expounde"), persisting to this day in the best writers. Dr. Hall cites Udall (1542: "trye and shewe"); Anon. tr. Erasm. Apophth. (1548: "fall in hande and chide"); Bishop T. King (1594); Bishop R. Mountagu (1621); Mrs. F. Sheridan (1766: "see and get"); Miss E. Carter (1771: "mind and answer"); "and, in this century, Coleridge, Bishop Thirlwall, Rev. R. I. Wilberforce, Arthur Clough, and a dozen more good writers to whom I have references."* See also Phil. Soc. Eng. Dict. s. v. *and*, tenth use. Of the almost universal colloquial use there can be no question.

Since usage makes grammar, this array is a sufficient answer to the nice persons who denounce "try *and* ——" as a vulgarism; but I am satisfied that its use really goes a great deal further back than 1526. I can produce positive evidence of exact equivalents from Homer (Od. vi, 126, πειρήσομαι ἠδὲ ἴδωμαι), Cicero (De Or. i, xlvi, *experiar et dicam*), Vergil (Æn. ii. 27, 28, *ire et videre*). These remote equivalents seem to establish the à-priori naturalness of the locution, and to imply the very early appropriation of it by a language as natural as English, as well as its wider use even in the classical tongues beyond the instances that chance has thrown in my way. And the psychologic basis is as plain as valid: so long as two acts are equally contingent, one of them being important or significant only as a preliminary to the other, mere order of expression is adequate to suggest order of occurrence or even purpose and result, cause and effect. Hence, "I will try *and* see" is valid, because both acts are contingent as being future; and "Every day I try *and* read a little" is valid, because both acts are contingent as being generic. But, with past tenses, *and* cannot take the place of *to*: the past being the domain of fact only, the main event, once contingent, either did or did not occur, and now the preliminary is either no longer important as such, or it is all-important as the sole surviving actuality of the undertaking. Hence, in the past, I must ordinarily say either "I did it," or "I tried *to* do it," the former celebrating a success, the latter apologizing for a failure or claiming an intention. "I tried and did it" has the special effect of elevating a mere preliminary to the dignity of an independent act, and of substituting for a logical relation the simple chronological sequence—which is only another way of saying that the theoretic relation is ignored in the interests of the actual phenomena. This formula implies the happy sequel to an original distrust of the means offered or our own power to take advantage of them: the unhappy issue would require "I tried and failed" for the complete account.

(2.) As to the possessive form of *somebody else* and the like, most of our manuals omit specific mention, whether from oversight or from reliance on the general rule for complexes; but the one or two that speak of it pronounce explicitly for *somebody else's*, according to the principle that treats complexes (including appositions) as single wholes requiring the possessive sign immediately before the thing possessed. Two of our few really great authorities assure me they have never noted *somebody's else*, except perhaps as an individual peculiarity; one of them rests the validity of *somebody else's* on Maetzner and Oliphant, who credit it to Dickens (1840), and himself hazards the guess that *somebody's else* is the revision of a shrewd Harvard theme-corrector. In view of the actual facts, I consider such utterances as significant and monitory.

Dr. Hall's references show *somebody's else* to be the type of the earlier form, going back to the beginning of the sixteenth century. He cites Lord Berners (1525), Sir T. Key (1547), Sir T. Hoby (1561), for "no man's else"; John Heywood (1561), Earl of Orrery (1654), Congreve (1694), Sterne (1759), Mrs. F. Sheridan (1761), for "any man's else," "no one's else," "anybody's else." In these combinations, O. E. genitive *elles* is treated as an adverb equivalent to "besides"; but, in natural development, being integrated with the word immediately affected (*somebody*), it becomes an adjective; and, beginning with Bentham (1817), the complex has conformed to the general rule of possessive formation as the prevailing colloquial idiom, almost the only collocation found in our literature. Archdeacon Hare (1833) says: "People more frequently say *nobody else's* than *nobody's else*."

Noting these combinations, and without examining the passages, I prognosticated that the earlier form (somebody's else) would not be found as a modifier, but only as a part of the predicate—not as in "somebody's else book," but only as in "the book is somebody's else"; and Dr. Hall assures me that the progress of the form has been concurrent with the progress of the syntactical relation—a point, so far as I know, not taken account of hitherto. It is interesting to add the indirect evidence afforded by such transitional uses as W. Browne's (1647) "for anybody's sake else."

CASKIE HARRISON.

THE BROOKLYN LATIN SCHOOL, May 18, 1889.

* Since this was written, I have observed near the beginning of 'English Humorists' "try and describe," "try and please."—C. H.

Notes.

HENRY HOLT & Co. will shortly publish a novel by Mrs. Fanny Kemble Butler of which the scene is laid in her old haunts among the Berkshire Hills.

Chas. Scribner's Sons announce a probable new edition of the 'Diary and Letters of Gouverneur Morris,' which has already reached a second edition in London. An English edition of their 'Chopin, and Other Musical Essays,' by Henry T. Finck, will also be brought out.

Swinburne's third series of 'Poems and Ballads' is announced by Worthington Co., who will also publish directly a new edition of Main's 'Treasury of English Sonnets,' and a portfolio of Presidential portraits from Washington to Harrison, consisting of India proofs of steel engravings.

Dr. Döllinger celebrates the opening of his tenth decade by issuing the fruit of his long study of the history of mediæval heresy in a volume of 'Contributions' thereto ('Beiträge zur Ketzergeschichte des Mittelalters'), of which Part 1 deals with the heresies of the early Middle Ages, and Part 2 consists of unprinted documents bearing on the history of the Waldenses and Albigenses (Nördlingen: C. H. Beck; New York: F. W. Christern).

An excellent little compilation is the 'List of Cases Selected from the New Hampshire Reports for the Use of Law Students' (Concord: Printed by the Republican Press Association), prepared by the Hon. Jeremiah Smith, lately one of the Justices of the Supreme Court of that State. This is no digest, but a selection of the two or three leading cases on each of the principal topics of the law, or rather upon such of them as are illustrated in the New Hampshire Reports. The author has a few pages of introduction explaining his purpose and the best method of using the book. It will be strange if this admirable idea is not followed in other States. But in order to be really helpful the work must be done elsewhere, as it is in this instance, by a learned and careful lawyer. We sincerely hope that this example may be followed.

Mr. Andrew Lang's volumes follow each other with the ease of thistle-blows, and they have the same lightness and identity one with the other. One does not expect much when the title of a book is a pun, and 'Lost Leaders' (Longmans, Green & Co.) does not disappoint the expectation. These short papers on fishing, schoolboys, American humor, and other nondescript subjects, which, taken together, have the complexion of that summer city-article to which journalists relax themselves in the so-called "silly season," have been collected from the columns of the *Daily News;* but, galvanized though they be, they cannot last much longer. Indeed, the sooner Mr. Lang's fantastic notion of the "Puritanism" of American humor disappears, the better. The second volume, lately received, of his 'Letters in Literature' is from the same publishers, and is a second edition. It is superficially more useful than the preceding, and deals with names from Plotinus to Gérard de Nerval. The matter is, however, very slight, and the manner is "uppish" to a fault. Mr. Lang's reputation is deservedly excellent for many of his versatile works; but to trifle in books is a different thing from trifling in newspapers.

'The Brotherhood of Letters,' by J. Roger Rees (Lockwood & Coombes), adds another volume to the characteristic publications of this firm, devoted to the lovers of literary anecdote. The book deals with the meetings of groups of authors principally, and is made up of well-worn material easily accessible, but the stories are pleasantly retold. We may say, however, that one new tale—that of the disclosure of the personality of Charles Egbert Craddock at Boston—is grossly erroneous.

A little volume, 'Times and Days,' subtitled "Essays in Romance and History" (Longmans), and made up of paragraphs, chiefly moral, and brief characterizations of fanciful persons intended to illustrate the complex dealings of

fortune with men and women, shows the difficulty of this form of literature for English writers. It is sensible, but entirely mediocre, and is without any of the flash of style, the finish, and especially the humor, which make such "chippings" readable.

Sir John Lubbock publishes a second part of 'The Pleasures of Life' (Macmillan). These additional essays, dealing with Ambition, Wealth, Health, Love, Art, Poetry, Music, Nature, Religion, and the Hope of Man here and hereafter, are in the same spirit of quiet and assured optimism, and characterized by the same just taste and tempered wisdom as the earlier volume, already reviewed in these columns. They are excellent for young and old, and add to the cheerfulness of books. We have been struck by the fine quality of the author's quotations from the lesser poets, and especially from Sir Walter Scott—a fact which we mention in view of the combined attack of Messrs. Gosse and Howells upon the old giant of romance. We observe, however, carelessness in ascribing the quotations to their authors, and in the quotations themselves. Sir John Lubbock's volume, by the way, is a useful illustration of all that Darwin missed by his narrower devotion to the natural history of life.

Mr. Austin Dobson's new edition of the 'Poems and Plays of Oliver Goldsmith' (London: J. M. Dent & Co.), in two handy and beautifully printed volumes, embellished with a number of delightful small etchings by John Jellicoe and Herbert Railton, is marked by that perfection of editing which is the most valuable result of minute scholarship, and it is as excellent in taste as in knowledge. The explanatory footnotes which elucidate the obscure allusions natural to Goldsmith's style, and the purely editorial annotations in respect to sources and parallel passages, make the edition complete in equipment as it is in matter.

Prof. Thomas Davidson's 'Prolegomena to In Memoriam' (Houghton, Mifflin & Co.) is principally valuable as a concordance of the poem. The Introduction is a somewhat heavy philosophical essay to show that Tennyson illustrates the leading principles of an idealistic philosophy and is a congener of Aristotle, Goethe, Dante, and the greatest thinkers generally who have written upon life; and this essay is followed up by a systematic prose rendering of the course of the poem, in which its "swallow-flight" character is entirely lost. The illustrations from other poets and prose writers are of interest; but it is noteworthy that the perspicuity of Tennyson is much greater than that of his commentator, though the connections of the thought are perhaps less clear. The comment is, in fact, less Tennyson himself than Tennyson seen in the light of Prof. Davidson's exposition of a philosophic system with which Tennyson was unconsciously concerned.

The Baconian-Shaksperians have themselves to thank if they find the tables disagreeably turned upon them in the latest contribution to the theory of the authorship of the plays, 'Is there any Resemblance between Shakespeare and Bacon?' (London: Field & Tuer, 1888), by an anonymous writer. The author's method of denying Bacon's supposed claim is to blackguard him much after the fashion in which the Baconians have blackguarded Shakspere. He says, in brief, that such a wretched creature could not have produced the plays. This is amusing as an instance of "the biter bit"; but the writer's heart is too much in his sarcasm to give the impression of his being just to the derided Bacon.

A number of new editions besides those mentioned above are on our table. The late Hepworth Dixon's 'Her Majesty's Tower' (T. Y. Crowell & Co.) reaches the utmost limit of compression in becoming one volume from the original English four and American two. One index covers the whole, but the paging is not continuous. The illustrations, portrait and other, are retained. Houghton, Mifflin & Co. start a new "Illustrated Library Edition" of Thackeray's Complete Works, beginning with 'Vanity Fair, and Lovel the Widower.' The series contemplates twenty-two volumes, containing more of Thackeray than will elsewhere be found, a large proportion of the illustrations designed by himself and other artists (to the extent of some 1,600), and regular introductions of a biographical and bibliographical nature, made up from many sources. The outward aspect of these volumes is very presentable, in plain green cloth. The paper is rather thin; but we have to do with a voluminous writer, and the price of this edition is kept down. A two-volume edition of Victor Hugo's 'Notre-Dame de Paris' in the original French has been brought out by W. R. Jenkins, New York, and Carl Schoenhof, Boston. The typography is open and very satisfactory. The illustrations —"process" cuts after drawings in wash in the Tartarin style of marginal decoration — are poorly printed. A third edition of an English 'Story of Theodore Parker,' by Frances E. Cooke, comes to us from Cupples & Hurd, Boston. It is a brief popular account of the great preacher, told with sympathy and animation, but with little slips as to details not unnatural in a foreign writer, as when the sea is represented as "dashing up in spray and foam upon the cliffs" at Newburyport. An anonymous hand has supplied an introduction composed mainly of eminent men's estimates of Mr. Parker, and there is a bibliographical appendix. The desperately bad portrait at the front should be expunged or replaced.

School-teachers who wish to work out of the ruts may profitably examine, as aids in their rhetorical work, the 'Winter's Tale,' edited by K. Deighton, and Scott's 'Rokeby,' edited by Michael Macmillan—both in the every way attractive little linen-covered series bearing Macmillan's imprint; and Mr. W. J. Rolfe's 'Fairy Tales in Prose and Verse,' selected from early and recent literature (Harpers). We might couple with the last-named a late volume in the new-old Bohn's "Select Library," a translation of Wilhelm Hauff's 'The Caravan, and the Sheik of Alexandria.' Hauff's 'Das Bild des Kaisers,' by the way, has been edited with notes for the Pitt Press Series by Karl Breul (Cambridge, Eng.; and New York: Macmillan).

The monthly *Dial* of Chicago, a journal wholly given up to literary criticism, is before us in a bound ninth volume, representing as many years of useful existence (McClurg & Co.). We wish it as many more. We have the same good-will for the Washington *Public Opinion*, "a comprehensive summary of the press throughout the world on all important current topics," which has just closed its sixth volume (Oct., 1888–Apr., 1889). Its longevity speaks for its adaptation to the need of many readers and writers, and we recall none of its predecessors in the same class that was superior to it. Besides press extracts, once in a while a document is preserved entire, like Lord Sackville's luckless correspondence; and there is a very condensed summary of the week's news. Literature is cared for by book reviews. It might almost be said of journals like this that they are most valuable when least fresh, consecutive reading of any given number being a little fatiguing, while for reference their value may be very great. To this end *Public Opinion* of course provides an index. Another volume has been added to the *Century* series—the 15th of the new series (Nov., 1888–Apr., 1889). It is difficult in a few words to touch off its physiognomy. Mr. Kennan's Siberian papers, the Hay-Nicolay Lincoln biography, the Stillman-Cole art papers, the Washington Centennial series, are the most prominent features.

Apropos of the Centennial, we have been tardy in mentioning the handsome volume, 'An Essay on the Autographic Collections of the Signers of the Declaration of Independence and of the Constitution,' by Lyman C. Draper, LL.D. (Burns & Son). The essay in its present shape is an improvement upon Dr. Draper's paper on the same subject in the tenth volume of the Wisconsin Historical Society's Collections. Appendices tell of the autograph forgeries of one Robert Spring some twenty years ago, and reproduce Mr. Paul Leicester Ford's list of members of the Federal Convention of 1787. Altogether, this monograph is exhaustive of the subject proposed to be treated, and will be valued accordingly.

'Instantaneous Scenes at the Centennial of George Washington's Inauguration' forms another of Mr. A. Witteman's albertype albums. The scale in this instance is small, yet one can recognize here a couple of ex-Presidents, here a President *in petto*, in the procession. The arch in Washington Square is well depicted. Larger and better views of the same class are to be found in the album 'New York' in Brentano's series of American cities. They are accompanied by descriptive letter-press, and fairly embrace the momentary characteristic buildings, scenes, etc., of an ever-changing metropolis.

We read in *Poet-Lore* for May that Dr. Horace Howard Furness has completed his arduous labors on "As You Like It" for his 'Variorum Shakspere,' and will go to press with it in the fall.

It is a noteworthy circumstance when a *Magazine of Western History* finds it expedient to transfer its seat of publication from Cleveland to New York city (32 Cortlandt St.). The May number begins the tenth volume. The dislocation of this periodical is suggested by its opening paper on the "Walters Art Collection at Baltimore," a theme not obviously germane to Western historical research. Nor has the second paper, on the Philadelphian author, Henry Reed, who perished in the *Arctic*, a striking fitness in its present environment. Portraits of Mr. Walters and of Mr. Reed and of another Philadelphian, Furman Sheppard, adorn this heterogeneous number.

The *Décadent* appears in its issue of April 15–30 under the name of *La France Littéraire*. This change of name does not appear to affect in any way its sweetness. It is still under the editorship of M. Anatole Baju, and manifests the same spirit, and is carried on by the same collaboration, as its braggart and worthless predecessor. In announcing the change, the *Figaro* exclaims: "Maudit printemps! voici les feuilles que tu fais pousser!" Such success as the *Décadent* has had—it printed, or says that it printed, 9,500 copies of its last number—has been a disgrace to French readers and writers.

It is earnestly requested that all persons having in their possession letters from the late President of Columbia College, Frederick A. P. Barnard, send them to Prof. Nicholas Murray Butler, Columbia College, New York, at their early convenience. The letters will be returned after copies have been made.

—The *Scottish Geographical Magazine* for May opens with Mr. Stanley's letter to the English and Scotch Royal Geographical Socie-

ties. It contains little of interest additional to that written three days before to the Emin Pasha Relief Committee. At the close, however, there is a sentence which may possibly shed some light on his future plans. Referring to the native reports in respect to the nature of the country between the south shore of the Albert Nyanza and Beatrice Gulf, a lake far to the south discovered by him in 1876, he says that the verifying them "must be left until we take our journey homewards." If it was his intention to march to Zanzibar, his course would lie directly through this region, which, he says, promises "curious revelations," the one of principal interest being as to whether this latter lake belongs to the Nile or to the Congo. This is followed by an interesting description of Samoa, by Dr. Geo. A. Turner, for twelve years a medical missionary at Apia, and mentioned by Capt. Erben in his account of the *Tuscarora's* Mission in the *Century*. Referring to the extreme politeness of the Samoans, of whom he expresses a very favorable opinion, both as to character and mental ability, he says it is shown particularly in their language. "Special words are used in addressing persons of rank, and in many cases the particular grade of a man's rank is indicated by the word used. . . . Every member of a chief's body has a name different from that applied in the case of a common man. His feelings, his actions, and his possessions have different names, and in innumerable instances the common name of a thing is changed for another when that thing is spoken of in his presence. But chiefs in speaking of themselves always use the common language. The language itself, which exhibits many other interesting peculiarities, is a very smooth one, and has been called the 'Italian of the Pacific.'" He sketches briefly the recent history of the islands, showing a decided bias against the Germans. The Samoans themselves, he asserts, "would hail with delight a British or an American protectorate, while they would view with very different feelings the establishment of German rule in their midst." He advocates the appointment of an international land commission for the purpose of settling disputed titles, "the most fruitful source of the constantly recurring troubles between the Samoans and foreign Powers." This need arises from the fact that, during a war in 1868–73, "a mania for selling land set in. The natives were anxious to get superior arms and ammunition for the war, and when they found that all they had to do in order to get what they wanted was to say they had a piece of land to sell, give its name and its approximate dimensions, and sign their name, they flocked in hundreds to the buyers. In innumerable instances large tracts of land were sold by persons who had no right to dispose of them, and in many cases the price given was at least as low as one shilling and sixpence per acre." There were "instances where a piece of land was sold two or three times on the same day to different buyers. There was no public notification of the lands bought, and no attempts to prevent overlapping."

—The claims of the Portuguese to Nyassaland are well stated by J. Batalha-Reis, who shows conclusively that they knew of Lake Nyassa as early as 1624, had visited it by the middle of the century, and had had commercial and political relations with the natives of the region surrounding it from that time to this. Dr. Livingstone, it may be remembered, is always credited by English writers with the discovery of Lake Nyassa. See, for instance, Prof. Drummond's article on the Zambesi, in the ninth edition of the 'Encyclopædia Britannica.' The dispute between the English and Portuguese in respect to this region will be greatly affected by the discovery, reported in the London *Times* of April 29, of a river in the delta of the Zambesi, navigable for vessels of 400 or 500 tons burden. This will afford direct access from the sea to the territory occupied by the English and Scotch missionary and trading companies. Now all goods destined for them have to pass through Quillimane, and thence by several transhipments, including a land portage, to the Zambesi and the Shiré. As Lord Salisbury insists that the former river shall be a free and open international highway, the opening of the River Chinde to trade will probably prove of very great importance.

—The elaborate statistics of illiteracy in Massachusetts contained in the recently published volume of the reports on the census of 1885, as compared with those of the previous census, give some interesting and suggestive facts. The whole number of illiterates of ten years old and over is 122,263 (or 45,550 males and 76,713 females), an increase of 17,750, or 16.98 per cent., while the increase of the population during the ten years was 20.43 per cent. Three-quarters of these were Irish and French Canadians, in the proportion of nearly 55 and 20 per cent. respectively. It is noteworthy that the whole number of Irish illiterates in 1885 was 67,169 against 67,164 in 1875; but the proportions of men and women have very significantly changed, the number of illiterate men having decreased 4,366, while the women of course have increased 4,371, with a total of 48,012. Very full details are given as to the occupation of the illiterate, from which we learn that a very large proportion, over 76 per cent., of the women are in domestic service. Chelsea is the most intelligent city in the commonwealth, having only 509 illiterates out of a total population of 20,926, though it is followed closely by Brockton, Malden, and by Lynn, which has only 4.02 per cent. of its population of 37,950 illiterate against the 20.65 per cent. of Fall River. This of course simply shows that the manufacture of shoes demands more intelligent labor than that of cotton goods. Three small towns in Worcester County contain the largest proportion of illiterates; in West Boylston more than one in every four being of this class. It is a slightly encouraging fact that while there is an increase of the preventable illiteracy—that is, of those under 20 years of age—there is a corresponding decrease of the incorrigibly illiterate.

—It was known long ago that effigy mounds were found only in Wisconsin and the nearest vicinity, and that they were on that account probably erected by Dakota Indians, who inhabited that tract. Recently two mounds of the same emblematic class were discovered in North Carolina in places where small tribes of Dakotan affinity, the Tutelos and their allies, had lived in historical times, and thus the Dakota origin of all these mounds seems affirmed. But there are other characteristics in the mounds of other States, and these marks, just as important as the effigy shape, have enabled Prof. Cyrus Thomas of the Bureau of Ethnology to classify all the burial mounds of the northern section of the United States into eight districts. Some of these districts may have indistinct limits on one side or the other, or need more discoveries for a more accurate description of the class of objects found in them; nevertheless, this new classification is a starting point for a more scientific handling of the mound question, and in doubtful points will serve as a working hypothesis. Prof. Thomas declares that the sepulchral tumuli surpass all other works of the mound-building Indians in importance, as the relics found in them give us more indications as to the beliefs, habits and art, homes and daily life, the ethnical character of their authors, than any other mounds. Their internal structure is also of more importance to us than their outward shape.

—In his article, "Burial Mounds of the Northern Sections of the United States," in the Fifth Report of the Bureau of Ethnology, 1883-1884 (Washington, 1888), he thus defines his districts: (1.) The Wisconsin district, or area of the emblematic mounds. (2.) The Illinois or Upper Mississippi district, extending through Northern and Central Illinois, parts of Iowa and Missouri; the mounds show simple conical tumuli for burial purposes, and include stone or wooden vaults or layers, copper axes, pipes, etc. (3.) The Ohio district, including parts of Ohio and West Virginia, and containing "altar mounds," great circles and squares of the enclosures, etc. (4.) The New York district, the relics of which were studied by Squier and ascribed by him to the Five Nations. (5.) The Appalachian district within the Alleghany ridge; conspicuous by reason of its numerous stone-pipes, and the presence of mica-plates with the skeletons. (6.) The Middle Mississippi area, or Tennessee district, extending over both sides of the Mississippi River; distinguished by the large size of its mounds, and preëminently the "pottery region." (7.) The Lower Mississippi district, differing but little from the previous section by its relics, except in the presence of small circular house-sites, slightly basin-shaped, which were burial places at the same time. (8.) The Gulf district east of the Mississippi River, similar to the above in its remains, but differing again from that of the Florida peninsula.

—Whatever may be the shortcomings of this working hypothesis, there is no doubt that it is largely substantiated by the linguistic divisions and in some degree also by the racial families existing within the area of the Eastern States. This is a point about which Prof. Thomas is silent, but it is apparent to those who have studied the details of the linguistic areas. Not only does district 1 belong exclusively to the Dakota and 4 to the Iroquois tribes, but 3 covers the territory once held by the Shâwanos or Shawnees, 2 that of the Algonkins just west of these, Sauks, Potawatomis, Illinois, etc., 5 that of the Cherokees, the congeners of the Iroquois, while the area of 8 was occupied almost in its whole extent by populations of the Muskokee family. The areas of 6 and 7 were occupied by different nations of small extent, and hence the characteristics of these two areas are contradictory and not easily defined; it will be best to regard them provisionally as territorial areas only, until more material is in hand to judge from.

—It is a matter for gratification to practical astronomers in America that instrument-makers are able to hold their own in our country against a rather strong competition in England and on the Continent. Messrs. Fauth & Co. of Washington are in the foremost rank, and are now at work upon a twenty-inch telescope for the University of Denver, which will be set up next autumn in the mountains near that place, at an elevation of five or six thousand feet above sea level. The mechanical portions of the telescope embrace many novel devices for facilitating its manipulation and working, among them Mr. Saegmuller's new attachment for pointing the telescope accurately at any celestial object too faint to be seen with the naked eye. This operation has gene-

rally been performed by reading two circles, one upon each axis of the mounting, and is usually a slow process with large instruments, often requiring the services of an assistant to the observer. By the new device the indications of both circles are mechanically conveyed to the eye end of the telescope, and illuminated by small electric lamps, so that the astronomer himself makes the pointing of his instrument while seated in the observing-chair. In addition to their instruments for use in the higher astronomy, the same makers have lately begun the manufacture of a less costly, but sufficiently precise, class of instruments at a very moderate figure, which should play an important part in the wider diffusion of a knowledge of the methods of practical astronomy among the students of our advanced schools. The outfit comprises all the instruments in ordinary use in large observatories; and while, of course, it lacks the accessory refinements with which the working astronomer cannot dispense, the actual handling of the lesser apparatus affords the means of admirable training to the hand and the eye.

—Mistakes in literary history die hard. A proof of this is to be found in the introduction to Prof. Schele de Vere's otherwise very commendable edition of "Le Cid," just published by W. R. Jenkins. The Professor mentions Juan Diamante as the first poet "to use the history of the great champion of the Spanish nation, Don Rodrigo de Bivar, known in poetry and tradition as *El Cid*, and to bring him before the public in a drama called *El Honrador de su Padre*." This mistake was committed originally by Voltaire in 1764, and repeated afterwards by La Harpe and Sismondi. Now, however, after the publications of Angliviel de la Beaumelle (1823), of Génin (1841), of Lucas ('Documents relatifs à l'histoire du Cid,' 1860), and finally since the publication of Marty-Laveaux's great edition of Corneille's works in the "Collection des Grands Écrivains de la France," an editor of "Le Cid" is hardly excusable in not knowing that Juan Bautista Diamante was born in 1626, only ten years before the first performance of Corneille's play, and that "El Honrador de su Padre," far from having been the model of the other works on the same subject, is in many of its parts an adaptation, at times a literal translation, of "Le Cid." The one author to whom Corneille was indebted, and largely so, as may be seen in Prof. Petit de Julleville's excellent edition of "Le Cid," is Guilhem, or more correctly Guillen, de Castro, who preceded Diamante by more than fifty years. His play, "Los Movedades del Cid," was printed for the first time in 1618; Corneille's "Cid" was performed in the latter part of 1636; Diamante's play seems to have been composed in 1648. Fontenelle wrote once that Corneille had in his library "Le Cid" translated in all the languages of Europe, even in Spanish. It is very likely that the Spanish translation mentioned by Fontenelle was simply Diamante's "El Honrador de su Padre,' which afterwards Voltaire, La Harpe, Sismondi, and now Prof. Schele de Vere mistook for the model followed by *le Père de la Tragédie Française*.

THE ENCYCLOPÆDIC DICTIONARY.

The Encyclopædic Dictionary. A new and original work of reference to all the words in the English language, with a full account of their origin, meaning, pronunciation, and use. With numerous illustrations. Edited by Rev. Robert Hunter, assisted in special departments by various eminent authorities. 7 vols., 4to (each in two parts). Cassell & Co. 1888.

Ten years ago the first volume of the Messrs. Cassell's 'Encyclopædic Dictionary' was given to the world, after seven years of preparatory labor on the part of the editor and his assistants. The concluding, fourteenth, volume was published at the end of last year, and somewhat tardily we will now attempt to give an account of the methods and scope of this great undertaking, and our opinion as to the measure of success with which it has been wrought out. The idea of attempting to combine in one work "the ordinary features of a dictionary of the English language" with a treatment of "certain subjects with some of the exhaustiveness adopted in an encyclopædia," originated with the publishers. That it responded to a popular need is evident from its having been since imitated in this country. The numerous pictorial illustrations, introduced in aid of definitions, are the outcome of the modest rivalries in this direction of the publishers of Worcester's and Webster's dictionaries, thirty years ago. Evidently the later portions of the work have not been slighted in the effort to bring the whole within a predetermined limit, as two more volumes have been given than were originally planned. The long list of specialists to whom particular departments of knowledge have been assigned, warrants the expectation of thorough and accurate treatment of all subjects alike.

The editor claims, with justice, that the vocabulary, embracing some 180,000 words, is much more exhaustive than that of any previous dictionary of our language. Added words embrace not only novelties and Americanisms, but "a nearly exhaustive list of obsolete words from about Chaucer's time," and "a complete vocabulary of words to be found in Scott and Burns." Specific designations in zoölogy and botany, and technical terms in science and art, as well as those of the national sports and games, are included. Slang, colloquial phrases, provincialisms, semi-naturalized words, and hybrid compounds have not been overlooked. A most valuable feature is the fulness of quotation by which the meanings of words are illustrated, with precise references to chapter and page. With the exception of geography and biography, we are assured that all the words will be found that occur in a first-rate cyclopædia; while even those proper names have been included which have been given to some object in nature, or which form the principal member of a compound word, as well as the names of the books of the Bible.

We think we have sufficiently indicated the comprehensiveness of scope of the work, and the difficulty of pronouncing an intelligent and just decision upon the manner in which it has been executed. What we shall have to say about it will be based upon such an extended examination of it as it has been in our power to make, and can be more conveniently divided into some consideration of its character as an encyclopædia, and afterwards as a dictionary. Without laying claim to omniscience, we will premise by saying that, in our judgment, all the departments of knowledge with which we have any acquaintance, with a single exception, have been confided to competent hands. We have been particularly impressed by the excellence of the articles in zoölogy, and especially in palæontology, as can be tested by examining the one upon the *Mammoth*. The recent science of prehistoric archæology is well cared for under such headings as *Flint Implements*, *Lake Dwellings*, *Tumulus*, etc., in which only a few unimportant errors have been noticed that will be pointed out later. We feel, however, constrained to state that the topics of Egyptian, Greek, and Roman archæology, which form a conspicuous feature in the work, are inadequately treated. We do not assert that we have examined every article bearing upon these subjects, but will proceed to point out some imperfections in the text that have been noticed, which can be readily corrected in the stereotype plates, as well as to indicate some unsatisfactory illustrations which ought to be replaced by better to enable the work to compete with possible rivals.

If a picture be needed of the *Areopagus*, surely it ought to be represented as it looks now, and not as a rock crowned by buildings which never had any existence. *Caryatides* are depicted as very badly drawn and ill-looking maidens. Under the heading *Spear* the Roman *pilum* is very improperly figured; and one of the *strigils* is upside down. The *Ampyx* is defined as "a band or fillet used by the ancient Greek and Roman women for binding their front hair; a head-band, a snood." This might properly be said about the *vitta*, but the ampyx was a metallic band worn as an ornament on the forehead. The illustration given of it is quite unlike the heads of Greek figurines, and thoroughly modern in character. Under *Amphitheatre* we are told that the *arena* was so called "because it was covered with sand or *sawdust*." We might naturally wonder where the Romans could have procured sawdust in sufficient quantities for such a purpose, even if they had any word in familiar use to designate it, and the word *arena* itself did not sufficiently indicate what was employed. Was the writer thinking of the modern arena of the circus?

The word *Cartouche* in Egyptian antiquities is defined as "an elliptical oval on ancient monuments and in papyri, containing hieroglyphics," without the necessary addition, "which always represented the name of a king," by which the key to the deciphering of the hieroglyphics was discovered. The *Sphinx* is declared to be "a figure having the body of a lion, winged, and a human (male or female) head." A little later, however, it is correctly stated that "the Egyptian sphinx had no wings." It ought also to have been said that the heads are always male. The *Rosetta Stone* is described, with the usual English injustice of ignoring wholly Champollion's successful labors upon it, and only speaking of Dr. Young's, while a perfectly useless engraving of it is given. But the most serious blundering we have noticed occurs in the article upon *Egyptian Architecture*, which ought to be completely rewritten. An engraving of a temple is given, which is said to be at "Edoon," instead of at "Edfou." It is stated that the architecture "owes many characteristic forms and effects to earlier cavern temples in Ethiopia." This is an exploded error, as the Ethiopian civilization is known to be a later development than the Egyptian. The architecture is said to have had its origin 2222 B. C. In view of the fact that authorities differ by 3,000 years in their opinions about the date to be assigned to the early dynasties, this might be called a bold assumption. The Theban dynasties are placed in the first period, while "in the second is comprised the erection of the Pyramids," by which a complete reversal of the truth is made. Some minor errors in the article we will pass over.

Another archæological article which ought to be entirely remodelled on account of its misleading character, is entitled *Omophagic Rites*. These are defined as "rites in which human flesh was eaten. . . . It is especially applied to the Orphic rites. . . . These rites

were celebrated triennially at Chios and Tenedos, and from these terrible feasts Dionysus obtained the appellation of eater of raw flesh. Omophagic rites were introduced into Italy, . . . and in B. C. 189 the Senate . . . issued the decree 'De Bacchanalibus,' which banished the Orphic mysteries from Italy." We have here a perfect tissue of errors. The only authority for the assertion that human sacrifices were anciently offered to Bacchus at Chios and Tenedos is Porphyry's treatise 'Upon Abstaining from Animal Food' (ii, 55), which is twice quoted by Eusebius. But in this he expressly argues that, although men were formerly sacrificed, no one would draw the inference that their flesh ought to be eaten like that of animals offered in sacrifice. In regard to the subject of human sacrifices in Greece, Grote says ('History of Greece,' chap. vi): "Such sacrifices had been a portion of primitive Grecian religion, but had gradually become obsolete everywhere, except in one or two solitary cases, which were spoken of with horror. Even in these cases, too, the reality of the fact in later times is not beyond suspicion." The *Senatus-consultum de Bacchanalibus*, passed B. C. 186 (not 189), was aimed at the orgiastic worship of Bacchus, horrible enough, certainly, but not accompanied by cannibalism.

We will close our archæological comments with two more suggestions. The cut employed to illustrate the word *Gargoyle* does not correspond with the definition given, as it does not represent "a decorative spout for rain-water." Under *Hindoo Mythology* it is declared that *Amrita* is "a fabled celestial tree bearing ambrosial fruit," and an illustrative quotation from Moore's "Lalla Rookh" is given. But this definition will not explain the allusion, in Mrs. Browning's "Island," to

> "Wide-petalled plants that boldly drink
> Th' Amreeta of the sky."

In the 'Imperial Dictionary' it is defined as meaning "the ambrosia of the gods; the beverage of immortality that resulted from the churning of the ocean by the gods and demons."

We will not, however, forget to mention certain minor corrections, which, as we have said, might be made in some of the valuable and timely articles upon subjects connected with Prehistoric Archæology. *Arrow-head* would be better explained if the first two misleading lines were dropped from the citation from Longfellow's "Hiawatha":

> "There the ancient arrow-maker
> Made his arrow-heads of sandstone"—

(a thing which no mortal or hero ever could have done), and only the last three were quoted. Under *Barrow*, Silbury Hill is figured, which is said to be 170 feet in perpendicular height, instead of 130, and 310 feet along the slope, instead of 238-249. The same misstatement about the height is repeated under *Tumulus*, where also the reference to "Cæsar de Bello Gall. iv" should read "vi." Under *Cycolith* reference is made to *Stone Circle*, but no such entry is to be found; further information, however, is given under the heading *Stone Worship*. In the article upon *Lake Dwellings* they are twice called "the habitations lacustrines of French writers," instead of "lacustres"; and it is stated that traces of them have been found at Thetford. This is a mistake, as it was not at that place, but at Barton Mere (near Bury St. Edmunds) that they were discovered. *Crannoges* are said to be depicted in "Johnson's Platt of the County Monaghan," instead of "Jobson's." Under *Celt* it should be stated that there is no doubt that those made of stone were earlier than the bronze ones; while under *Dolabra* prehistoric celts of bronze are figured and described as having been used by the Romans. This old blunder of the classical dictionaries has been pointed out in Dr. John Evans's 'Ancient Bronze Implements of Great Britain,' page 36. It is said that *Nephrite* is the same as jade, jadeite, and saussurite; but the last two are carefully discriminated by mineralogists from jade, which only is regarded by them as synonymous with nephrite.

We will end by pointing out an amusing blunder (apparently copied from Webster's Dictionary) that can be found under the head of *Castor*, which is said to be "from Agnus Castus, the old name of the Castor-oil plant." A ludicrous image is thereby presented to the memory which recalls the lady in Chaucer's "Flower and Leaf"—

> "On her head full pleasant to behold
> A crowne of golde rich for any king,
> A branch of *agnus castus* eke bearing
> In her hand."

It is not precisely a castor-oil plant which will suit such a picture. In some way the old name of *Palma Christi* has become confused with the very different shrub *Agnus Castus*, that had been correctly explained in the previous volume.

The attempt to bring down to date the introduction of new words into the language appears to have been very well carried out. *Boycott* is defined, although *Chauvinism* is not. *Volt* is given, but not *Ampère*, although it is referred to under that term as well as under *unit*; but no such entry as *electric unit* is to be found. Of course we cannot look for perfection in this respect, which a language continually growing makes impossible. As a contribution for future editions, we would suggest *Bowdlerize*, "to expurgate a text," and *Barmecide* (which is to be found in the latest edition of Webster and in the 'Imperial Dictionary'); and as new terms in science, *Labret*, *Drumlin*, *Kame*, and *Terremare*; while we think that *Wet-bulb thermometer* would be more naturally looked for than *Hygrometer*.

Although we have felt called upon to speak of such deficiencies as we have noted, we desire to express most emphatically our high commendation of the complete and accurate manner in which the encyclopædic character of the work is in general maintained. We have found it to exceed our expectations, and we think its great utility and convenience cannot be overstated. Any further remarks we may make will bear principally upon the philological character of the work.

The etymologies are claimed to be based upon "the latest and best of the etymological dictionaries, that of Professor Skeat." In regard to compound words the practice adopted is to admit all which have acquired a special meaning, but of those whose signification is sufficiently obvious, to give only a selection. The pronunciation is carefully indicated by diacritical marks. "The current pronunciation has been adopted as the standard"; but as Mr. Ellis's dictum that "there is *no* standard of pronunciation" is approved, we are led to infer that the practice of the editor has been followed in all cases. As the chief office of a dictionary must always be to furnish definitions of words, speedy reference to these is greatly facilitated by the manner in which different styles of type are employed to distinguish the various divisions and subdivisions of words. Transitive and intransitive uses are subdivided under ordinary and technical meanings; with a further subdivision into literal and figurative senses. "Each word has been broken up into as many different meanings as can be discovered or are illustrated by quotations. Words of the same form, but from different roots, and therefore really different words, are placed under separate headings." Finally, the various spellings of each word are grouped under its principal form; obsolete words are distinguished by an asterisk, and those rarely used, either in written or spoken language, are marked by a dagger.

Careful examination has satisfied us that these promises of the editor have been faithfully performed, and that his attempts have been successfully carried out. If we felt inclined to make any criticism upon his method, it would be that sometimes he carries his subdivisions of meanings too far. He defines *Tract* as,

* (1.) A protracting, or extending.

> "By tract of time to wear out Hannibal's force and power." (North: Plutarch, p. 152.)

* (2.) Continued duration; process, length, extent.

> "This in tracte of tyme made hym welthy."
> (Fabyan: Chronicle, ch. lvi.)

* (3.) Continuity or extension of anything.

We think it would have been simpler to have stated that the expression "tract of time" was formerly used as a phrase, as in Bentley, 'Phaleris' (ch. xiii.), "Which in tract of time makes as observable a change," p. 393. "The Attic language has in tract of time undergone many changes" (p. 401).

Occasionally we have noticed that a word is marked *obsolete* which should rather have been called *rare*. For example, *Continent*, as substantive, "that which contains any material thing, etc.," is so denoted. But we are told in Shelley's "Epipsychidion":

> "True love never yet
> Was thus constrained; it overleaps all fence;
> Like lightning, with invisible violence
> Piercing its continents."

Substantive, as an adjective, meaning "substantial," is also marked in the same way. But we have seen it used in this sense three times within a few pages by Grote ('History of Greece,' ch. lxvii): "substantive accusation," "substantive agent," "substantive means." Other lexicographers call this use of the word *rare*. The same is true of "*detch*, a strong desire," defined by Halliwell as "an absurd, foppish fancy. *Linc.*" This is employed by De Quincey, in his essay on "Richard Bentley": "Some people have a tetch for unmasking impostors."

It has seemed to us that it would have been well if the meanings of certain words had been illustrated by examples of their recent use. For instance, under *Malingerer* might have been quoted from Lowell's "Cathedral,"

> "To fetch life's wounded and malingerers in."

To "*Kex*, the old English name for hemlock," might have been added from Tennyson's 'Princess,' iv:

> "The rough Kex breaks
> The starred mosaic."

To *Lander*, from "Enid":

> "Heard by the lander in a lonely isle."

It has probably been found impossible to carry out with absolute fidelity the rule laid down with regard to the admission of compound words. *Heart-robbing* is given with a quotation from Spenser, credited to Worcester. We have noticed, by the way, that the editor seems to be scrupulous in giving credit when he has borrowed citations. It would not have occupied any more space to have added "Amoretti, 39," thereby practising at the same time his still better rule of preciseness of reference. But why should not *Heart-fretting* also have been inserted from Spenser, F. Q, iv, 5, 45:

> "In such disquiet and heart-fretting payne."

"*Viny*, pertaining or relating to vines; producing vines," appears, marked obsolete, with a quotation from Phineas Fletcher. Another signification of the word, also obsolete, should

not have been overlooked, that occurs in Sidney's 'Arcadia,' chap. iv: "viny embracements." Under "*Bargain.* 2. Specially: (2) Figuratively: (b) An indelicate repartee," "'Where sold he bargains, whipstitch?' Dryden," is to be found. But in "Love's Labor Lost," A. iii., sc. 1., "to sell a bargain" means only "to make a smart rejoinder"; Knight has pointed out that it was so explained by Capell. The obsolete word *Droumy*, meaning "troubled, muddy," is given; but the reference to Bacon, found in other dictionaries, is omitted, probably for lack of preciseness. This can be obviated by adding "To fish in droumy waters," 'Advancement of Learning,' B. ii. So under *Churme*, to the quotation from Bacon it would be well to add 'History of King Henry VII.' We think that the obsolete signification of the word *Resent*, in a good sense, ought to have been brought out strongly, as most lexicographers have done. We offer as an example to illustrate it: "Hosier's bill was mighty well resented and approved," Pepys's 'Diary,' February 12, 1688-9. To the quota of obsolete words we would also contribute *Lamm*, subs. [*Lat.* lamella]; "Battered the lamms of the gorget," Sidney's 'Arcadia,' B. iii.; *Barn*, verb, "to store": "Useless barns the harvest of his wits," Shakspere, 'Rape of Lucrece,' l. 859; and *Disinteress*, verb.: "Doth disinteress him of these obligations," Bacon, 'Hist. of King Henry VII.' Perhaps *Snub*, in the sense of sob, falls within the same class, as used in Shenstone's 'Schoolmistress': "And eke with snubs profound and heaving breast." Certainly does so an expression which occurs in Thomas Lechford's 'Note-Book,' p. 275 [159]: "Loth am I to heare of a stay, but am *plucking up stakes* with as much speed as I may." As an illustration of the word "*Mop.* 2. A young girl; a moppet. (Prov.)," we would suggest the following from 'The Arte of English Poesie' (1589), by George Puttenham (Lib. iii., chap. xix): "Vnderstanding by this word [moppe] a litle prety Lady, or tender young thing. For so we call litle fishes, that be not come to their full growth [moppes], as whiting moppes, gurnard moppes." In the same treatise (chap. xxiii) can be found a statement as to the original meaning of the word *Pelf*, which seems to be worth quoting: "Another of our vulgar makers spake as ill-faringly in this verse, written to the dispraise of a rich man and couetous. Thou hast a miser's minde (thou hast a prince's pelfe). A lewde terme to be spoken of a prince's treasure, which in no respect nor for any cause is to be called pelfe, though it were neuer so meane, for pelfe is properly the scrappes or shreds of taylors and skinners, which are accompted of so vile a price as they be commonly cast out of dores, or otherwise bestowed upon base purposes." The verses that are made the subject of this animadversion can be found in a translation from the Greek Anthology, xi, 294, by George Turberville, whose 'Epitaphes, Epigrams, Songs, and Sonets' was published in 1567.

Perhaps we have dwelt too long upon the obsolete portion of the dictionary. We will offer only two suggestions more, with the desire of making a slight improvement in the modern definitions that are admirably done. *Namby-Pamby* is "said to be derived by reduplication from Ambrose Philips, a poet (died 1749)." The surreptitious second edition of the 'Dunciad,' published in 1729, contained this line: "And Namby-Pamby be preferred for wit" (B. iii, l. 322); this was changed, in the later editions acknowledged by Pope, to "Ambrose Philips," as it now reads. The phrase was borrowed from "Namby-Pamby, or a Panegyric on the New Versification," in Henry Carey's 'Poems on Several Occasions,' of which the third edition had been published the same year (p. 55). Mr. Gosse, in Ward's 'English Poets,' says, "the immortal name of Namby-Pamby" is due to Carey. We hope his ballad of "Sally in our Alley" and his farce of "Chrononhotonthologus" may keep his name immortal too.

To the definition given of *Excise* and the quotation from Clarendon explaining the first occasion of its imposition, *Excisas*, from Bacon, 'De Augmentis', B. viii, and Mr. Spedding's note thereon, might well be added: "Originally in the Low Countries a municipal tax; it seems to have arisen from a privilege granted by Charles V. in 1536 to certain towns of imposing duties on wine, beer, and woollen and silken stuffs."

We will now take leave of this most valuable and low-priced contribution to the books of reference in our language by correcting a few misprints. Under *Abolla*, for "Stoic" read "Greek"; under *Cartesian*, for "Turaine" read "Touraine"; under *Mantle* (in falconry), the quotation from Spenser should read vi, 11, 32; under *Pandar*, for "Chryseis" read "Cressida"; under *Style*, the date of enactment should be 1751; under *Voluptuary*, for "luscus" read "luxus"; and under *Parian Chronicle*, for "Peirese" read "Peiresc." It is stated under *Donat* that Donatus was "born c. A. D. 333"; all that is known is that he taught about the middle of the fourth century. A good account is given of the *Arundelian Marbles*, but surely Evelyn deserves to have it recorded that it was at his solicitation they were presented to the University of Oxford. See his 'Diary,' September 19, 1667.

TUCKERMAN'S LAFAYETTE.

Life of General Lafayette. With a Critical Estimate of his Character and Public Acts. By Bayard Tuckerman. 2 vols. Dodd, Mead & Co. 1889.

LAFAYETTE'S name recurs so constantly in all histories, both of France and of the United States, that most people are probably under the impression that there is no lack of good lives of him. But this is by no means the case. The well-known French Mémoires consist (with the exception of an autobiographical fragment) merely of documents and letters. The life by Waln, published in 1825, written during the lifetime of the subject, was necessarily incomplete; Mr. William Cutter's biography, published in 1857, was too eulogistic to have any critical value; while Mrs. Farmer's 'Knight of Liberty,' published last year, readable as it is, is less a critical production than a good-boy's book. Ste.-Beuve's delicate and delightful essay in the 'Portraits Littéraires' was a masterpiece, but not a biography. So far as we know, Mr. Tuckerman's book is the first critical biography to appear since Lafayette's death. The author has been thorough and conscientious in his work. He does not change our opinion of Lafayette, but makes an interesting contribution to our means of understanding the career and character of this remarkable man.

Of Mr. Tuckerman's two volumes the first deals chiefly with Lafayette's career in the Revolutionary war, with the general features of which most American readers are more or less familiar. The young soldier, however, was not at this period in a position to accomplish very much. His relations with Washington, cordial and affectionate as they were, did not strikingly affect the march of events, and it is evident now that his youthful enterprise was chiefly important because its romantic character attracted to him the attention of all parties, and, indeed, the whole world. There is something perhaps a little painful in recalling in calm retrospect the sudden burst of self-devotion to an abstract idea with which Lafayette's life opens—wife, family, position, and fortune all abandoned or risked that he may, like some crusader of the Middle Ages, go abroad to fight for an aspiration, a dream, which has fired his heart, and in the realization of which he sees the regeneration of the world. When we think of what was before him, and before those who were dear to him, how everything was to be wrecked, including his own illusions; how he was to endure a martyrdom of exile and imprisonment, in order that others might reap the harvest of his labors, and a military despot establish the equality which he had expected to introduce through peaceful constitutional progress, we cannot repress a feeling of doubt whether it was all worth while, a childish sigh that it is now too late to change it, a childish wish that the story might be told in some other way, might be brought to some other conclusion.

From the first we feel that we have to do with a man urged into action, not by the common spurs of ambition and interest, but by a bright vision of a reorganized society, in which the old order of injustice, wrong, and oppression should be changed by the informing spirit of freedom into peace and good-will on earth. What he really left home and wife and friends to fight for in the wilderness was not, in fact, the quarrel over their rights which had been slowly dragging the colder-blooded colonists of America into a war—a war disliked by most of them, and the consequences of which their ablest men always dreaded. To them the war was a disagreeable duty; to Lafayette it was a glorious opportunity. He took service in the cause of humanity, as a young French gentleman of an earlier day might have taken service in the cause of Christ. If they were not religious feelings which led him to come to America, they were feelings inspired and governed by that spirit of self-sacrifice which was one of the finest qualities of the old French aristocracy, and lighted up by a zeal which was part of the inborn character of the man. It is agreeable to think that his military pilgrimage to this country was, after all, the brightest episode in his life. Washington was too sagacious and too kind-hearted a man not to value the devotion of such a devotee. The country at large quickly perceived the difference between the young Marquis who threw his purse into the treasury of the Revolution, and a class of adventurers attracted here from Europe by the chances of employment and promotion.

Mr. Tuckerman has evidently made a thorough study of the numerous sources of information with regard to Lafayette's life and career. He tells the story in such a way that the interest increases as it proceeds, and shows his skill as a biographer in this, as in making both the narrative itself and his own criticism of his subject heighten our sympathy. His style is careful and at the same time simple. It is a voucher in itself for the pains which the author has taken to be thorough and fair. Like most unbiassed men who have given any attention to Lafayette's career, he ends as an admirer, however much he deplores the mistakes of judgment which are so evident. Over the events themselves there is little room for controversy or dispute. Lafayette's life is what a lawyer would call an agreed case for the decision of history. These are the facts. What is the verdict?

The recent publication of Gouverneur Morris's diary has, to be sure, again raised the

question of the pecuniary relations between Lafayette and Morris. But Morris's bias was a little too evident to make him a good witness. Morris had a profound and comprehensive contempt for Lafayette, and Mr. Tuckerman is able to show that this made it impossible for him to be just in his criticism of his debtor's acts. Lafayette appears to have stripped himself of everything in his efforts to discharge his obligations, and when, at the age of fifty-five, he had to begin life over again, he did not retain enough to work profitably the small agricultural property remaining to him. The decree of an insolvency court would have probably left him better off than did that of his own conscience. In this, as in all such matters, a man is surely entitled to the benefit of the reputation he has created for himself, and no one except Morris ever thought that Lafayette had a tendency towards dishonesty, while throughout his whole previous career he had been most disinterested in money matters. Considering the times and Lafayette's ruined condition, Morris should have been satisfied, says Mr. Tuckerman, in getting all that there was to take.

The period of Lafayette's life which most interests us in the man was that of his adversity. Had he been a mere phrase-monger, as critics like Morris would have us believe, had he really had what Jefferson called a "canine appetite" for popularity, his career as leader of the constitutional movement during the Revolution might not have been different from what it was. But the time soon came when the "delicious sensation of the smile of the multitude" could no longer be had, when the applause turned to hisses; when, deserted by his followers, he fell into the hands of his enemies, to be subjected to violence and torture; when this favorite of fortune and fame had to hear the cruel sentence that he no longer had a name, that his existence for the outside world, with all that was dear to him in it, had ceased, and that he had no identity save that of the jailer's number on his cell. Through all this he never flinched; he never complained; he never recanted. Had he been willing to do so, the doors of his noisome cell would have been thrown open at once. But, as one of the most immutable of his critics afterwards said of him, he was a man who "never changed." No one would have endured these five years who had been nourished on phrases, or whose main motive in life was popularity.

When he was liberated, it was only that he might be subjected to other trials. If he had been physically tortured before, the temptations held out to him by Napoleon must, to a man in his ruined position, have been an almost more cruel torment. Honor, position, advancement, success for himself, his devoted wife, and his children, were again within his grasp, if he would say a few words, take a new title, wear a ribbon. But he was as unmoved by Napoleon's bribes as he had been by Austrian cruelty. He could not change his opinions; he could not profess to believe what he did not believe; he felt—and in this he showed the quality which throughout his life gave him a hold on power and influence otherwise inexplicable—that he represented an idea, and that his first duty in life was to this idea. A more prudent man would have got out of Olmütz by some ruse; a statesman might have compromised with Napoleon, and obtained from him some constitutional reform. But he was not a prudent man, nor was he a statesman. His character and ideas had that romantic tinge which lends itself to a great and unselfish enthusiasm—it was on this account that Napoleon called him a "noodle."

We cannot share this enthusiasm now, because we no longer share the illusion on which it rested. We know now that there is no magic in liberty or in equality to make mankind fit for free institutions. But this is no reason why we should do Lafayette's memory the injustice of confounding him with the phrase-mongers and sentimentalists who imitated his accents, but not his character. It is his character rather than his achievements which mankind are likely hereafter to recall with increasing interest. The French nobility, whatever may be said to its discredit, always showed itself equal to the task of producing heroic characters; the defenders of the aristocratic principle of inheritance would, if they were wise, count Lafayette among the most glorious proofs of the soundness of their theory. He gave up early in life, as so many others of the nobility did, the title of marquis, but what he did not give up was the high breeding, the keen sense of honor, the capacity for self-sacrifice, the fortitude in defeat and disaster, which were his by birth and early associations. His watchword and battle cry was Liberty, Fraternity, and Equality; but the secret spring of his actions was in great measure *noblesse oblige.* These volumes are a proof that a calm and dispassionate review of his life does not tend to diminish the brightness of his fame.

An Author's Love: being the Unpublished Letters of Prosper Mérimée's 'Inconnue.' Macmillan & Co. 1889.

THE judicious reader, long before he comes to the graceful epilogue of this volume, will have made up his mind as to the genuineness of the letters it contains. Perhaps they are as real as the "Inconnue" herself was; for it has never been shown beyond the possibility of doubt that she was not a creature of Mérimée's imagination. If it be true that his last letter to her was written only two hours before his death, as a note to it asserts, then the "Inconnue" was most likely a real woman; but the note may well enough be part of the author's work, and the abrupt ending of his letters, breaking off in the midst of trifles, be designed. It is a natural end to so long a correspondence. The present volume purports to be the other half of these well-known letters, the answers of the Unknown to Mérimée.

The author has shown a certain audacity in her choice of a task, but it may be said that her book in some measure justifies her boldness. The letters are at least always clever, and they supply the elements of a coherent story, and present a character that has a distinct resemblance to what one has imagined the Unknown to be. She was less than twenty-five years old, and Mérimée was at least ten years older when the first of the letters was written. In the gap which exists in the correspondence between 1839 and 1842, she finds time to marry, to lose her husband, and to inherit a fortune, and at the end of it is left quite free to begin over again her romance with Mérimée. Neither of them at any time seems madly in love with the other, though perhaps each at times would like to be. The passion dies out of Mérimée's letters very soon, and when it wakes, or seems to wake, in later years in the letters of the Unknown, it is rather a glow of tenderness that is seen than any kind of fire. Her lover has no reason to complain, as Mérimée did, of his mistress's prudery, if these are her letters. She dots the i's and crosses the t's of the scandals he relates, and adds some of her own also, using names, or well-known initials, sometimes of people now living. She leaves no doubt in the mind of the reader as to the nature of her own intimacy with Mérimée—perhaps she even emphasizes a little the scandal in her own case. She is a woman who possesses beauty and wit, a good social position which she never loses, though she is from first to last something of a Bohemian.

Her apparently careless letters are her best. Here is an epigram out of one of them: she says that it was reported of a cynical and pessimistic friend of hers that "he never believed in anything until he saw it, and then he was convinced that it was an optical illusion." There is also a good sketch of Disraeli in a few lines. But the fault of the longer letters is that they seem labored. The book has other faults of which one is bound to speak. We regret to say that it seems to us that the letters of Mérimée that are hardest to answer have been deliberately shirked. "Letter missing" is far too often what the reader finds in turning from one set of letters to the other. There are also some distressing inelegancies of diction. "Face the music" is not a very pretty phrase; nor is "humans" a good substitute for the word "people." But the book has some value, and is of considerable interest. For one thing it will provoke many to read Mérimée's letters again, and that is good. It is the belief of one who has just read the two books, letter for letter, that the better way will be to read them in succession. The present volume loses something by sharp and constant contrast with Mérimée's "Lettres"; and it is quite possible, though it sounds like a paradox, that the books will seem more consistent with each other, and even more connected, if they are read apart.

The Swiss Confederation. By Sir F. O. Adams and C. D. Cunningham. 1 vol. 8vo, xx, 289 pp. Macmillan & Co. 1889.

THE seriousness with which Englishmen have of late undertaken the study of republics is indeed remarkable. One distinguished jurist but recently departed to the shades with a farewell warning against democracy on his lips, while another, equally distinguished in history and practical politics, has furnished the best study of American institutions yet written. Now representatives of the British diplomatic corps offer a volume on that republic of democracies, the Swiss Confederation, with prefatory words which probably explain the works of the others as well. "Democracy," say they, "has made undoubted strides at home, and it may be well for Englishmen to devote a little time to the study of the institutions of a singularly democratic country abroad."

A place for such a book certainly exists, since, notwithstanding the hordes of Englishmen and other foreigners who annually invade Swiss territory, few really give attention to its political institutions. Certain prominent features are commonly known, and great sentimental interest is exhibited, but the common working of political institutions is too often overlooked in favor of the picturesque attractions of the country. But, if we have hoped that another Bryce has arisen for Switzerland, we shall be disappointed, for neither in style of treatment nor grasp of subject do we note his master hand. Comparison with the 'American Commonwealth,' however, is not strictly fair, since the much smaller space does not allow of as lucid a treatment as could be given. The intention to be just to the country under consideration is equally apparent in both works.

The book endeavors to describe the general features of Federal and State Government, the political parties, education, religion, and general social condition. At the very outset the

authors stumble over the difficulty which confronts the student of American Federal Government—sovereignty. Is it with the States, or with the Confederation, or both? With an apology to jurists for using such a term, they adopt the expression "double sovereignty," because it has the sanction of long usage and "cannot well be replaced by any other." Yet one of the best native constitutional writers (Orelli, 'Staatsrecht,' p. 97) has no hesitation in saying that, no matter what terms are used, the sovereignty in reality rests in the Confederation, and the cantons are "not sovereign, but simply autonomous." The student of Swiss institutions cannot sum up his estimate of the matter without settling this question, and solving it not by abstract definition, but by study of actual practice. Facts point to the answer, which an increasing group of scholars have adopted for this country, that sovereignty rests with the people as a whole, or, if you prefer, with the majority of the people. It finds two *methods of expression*—for certain general functions through the Federal Government; for local matters through the States. The Swiss cantons entered into a compact, supposing they were independent sovereignties which surrendered for the time part of their rights; but the actual state of things defies definition by that formula.

The authors appear to have clear conceptions of the individual departments of Swiss government, and devote one chapter to comparison with those of the United States. The characterization of the Swiss as a nation of good administrators is a point well taken. This is well illustrated in the chapters on the army and on education. No nation has a better organization of its available resources in either of these departments. The institutions known as the Referendum and Initiative are perhaps the most interesting experiments in democracy now in progress. The Swiss themselves appear to be satisfied with the results, since the newer constitutions all maintain and expand the popular vote on statute law. The authors timidly suggest that there may be something in this for the Irish Question.

The student and teacher of political institutions might desire that a different perspective had been employed. The chapters on Agriculture and Commerce, consisting largely of statistics and names of products, are of no particular value without further expansion, and their space would be better occupied by social discussion. The book, however, furnishes much interesting information, and will serve a good purpose if it create a still greater appetite for knowledge of our sister republic.

BOOKS OF THE WEEK.

Fine Arts.

THE SOCIETY OF AMERICAN ARTISTS.

AFTER the mediocrity of the Academy exhibition and the worse than mediocrity of the "Prize Fund," comes what is, by general consent, *the* exhibition of the year. At the Varnishing Day and Press View on May 10, at the Reception and Artists' View the next day, one heard a chorus of praise, and the opinion was all but universally expressed that the eleventh exhibition of the Society of American Artists is not only, by odds, the best picture-show of the season, not only the best the Society has held, but one of the most interesting, complete, and distinguished exhibitions of American art ever brought together. It is an exhibition that should finally dispose of the kind of complaint one has so long and so often heard against the Society. This, assuredly, is not a collection of interesting studies and of tentative beginnings, but of results accomplished. It is not the work of a small coterie of artists with a single aim and narrow views, but of "many men of many minds" working through varied means towards various ends. It is a small collection, comprising only 169 numbers, from 99 hands, yet it is hardly too much to say that it represents nearly all that is best in contemporary American art. The evenness of attainment here shown and the high standard of work exhibited are the more interesting from the fact that they are not the result of rigid exclusion, the number of rejected pictures being singularly small, but of the attraction of the best for the best. The body of our artists seem to have felt that this is an exhibition conducted solely upon artistic principles and with purely artistic aims, and to have piqued themselves upon sending only their best work. The visitor to other exhibitions who may have wondered where the good work of the year was to be found, will find it here.

Such being the character of this exhibition in particular and of the exhibitions of the Society in general, it is sad to know that, from mere lack of money and of public interest, the Society of American Artists is never sure for a year together where or when it can hold its next exhibit, and is obliged to shift from one gallery to another, and from early to late in the season, as circumstances may dictate, so that it can seldom count upon making sales, and is kept alive by the perseverance and enthusiasm of its members, with the slightest public support. This year its exhibition is held under more favorable auspices than ever before, in a pleasant gallery, well lighted and well situated; and its reception on Saturday week was so largely attended and so unmistakably successful that its friends would seem, for the first time, to have some reasonable hope of a financial as well as an artistic success.

The 169 works of art now placed in the Fifth Avenue Art Galleries are, as we have said, of so high and even merit that a selection for mention seems invidious. We cannot mention all, but we need blame none. Our agreeable task is only to point out the best of the many good. The collection is particularly strong in beautiful portraiture, and contains six or eight portraits which would be recognized as of the highest merit anywhere in the world. One of the most remarkable of them is Mr. John S. Sargent's "Portrait of Mrs. M——," an elderly lady in black silk, seated in an arm-chair. One feels in it, possibly, a slight artificiality of expression, but the refined character of the sitter is thoroughly rendered, and the technical workmanship is, without exaggeration, masterly. The handling is so strong and free, yet so delicate, that it is astonishing, and Van Dyck himself could not have done better the wonderful left hand. Mr. Sargent's other portrait, that of Mrs. F. D. M., is less complete, and hardly more than a most brilliant sketch. Mr. Thayer is at his best in the "Portrait of Brother and Sister," than which anything more radically different from the work of Mr. Sargent it would be difficult to conceive. Here the manner is rough, heavy, and labored, and the color brown and lifeless, but the root of the matter is in it. One learns to look through the mannered and somewhat unpleasant technique, and one is rewarded by finding a depth and purity of sentiment which is delightful. One feels the charm of the wistful, childish faces, and one forgives everything else. Mr. Thayer's other portrait, of a woman in pale-yellow silk and white lace, is less thoroughly successful, but has, nevertheless, great qualities with its decided faults. Differing from either of these is Mr. Chase's delightful "Little Lord Fauntleroy," which has all his usual dash and brilliancy of method, combined with a delicacy of drawing and characterization in the face quite unusual with him. Place with these Mr. Weir's grave and strong portrait of the actor E. S. Connor, one of his best works; Mr. Beckwith's strongly characterized "Mr. Isaacson" and well-painted "Portrait of a Lady"; Mr. Benson's graceful and delicate "Portrait in White"; Mr. Tarbell's refined presentation of a lady in a cinnamon-colored dress, and the rich color scheme by Mr. George B. Butler, and you have a showing in portraiture, by members of the Society, which it would be hard to surpass. Yet, by members and non-members, there are more than a dozen more which are so good as to deserve mention had one the space to give it them.

With the portraits is perhaps the natural place of Mr. Dewing's little picture called "A Note," which is portrait-like in its treatment. It is one of his good things, which is as much as to say that it is refined in line, delicate in execution, and beautiful in subdued color. One could wish the hands a little larger and the background less cold, but it is one of the attractions of the exhibition.

Another notable feature of the exhibition is the number of pictures it contains in which the human figure, nude or draped, is treated from a serious or classical point of view. It is only at the exhibitions of the Society that such pictures are apt to be found in any great number, and they are more numerous and of higher quality every year. The most ambitious work in the collection (so far, at least, as size is concerned) is Mr. Ernest L. Major's "St. Genevieve." Mr. Major is the young man who was sent abroad with a scholarship a year or two ago, and he has evidently been desirous of proving that he has not wasted his opportunities. His picture has merit and shows promise, but his canvas and his subject are both too great for his present strength. Mr. Shirlaw shows at his best in "The Water-Lilies," than which we have seen nothing better from his hand. His mannerisms

of drawing and handling are much less pronounced than in some other of his recent works, and his color is fuller and less monotonous. The picture is not a literal rendering of nature either in form or value, but its rich, decorative effect is undeniable. Mr. Brush is also at his very best in "The Crane Ornament," which shows all his serious qualities of drawing and composition, and is withal somewhat less drily painted than some of his productions have been. These two pictures are at the extremes of the gamut, but there are works which strike other notes. Mr. Eaton's "Magdalene" is warm-toned and full-modelled, while Mr. Henry O. Walker's "Philomela" is charming in its cool flatness, and the daintiness of Mr. Low's delicately finished little scene, "In An Old Garden," contrasts with the strong color and pleasant briskness of handling of Mr. Blum's "Reverie." Mr. Blashfield has a half-length figure of "St. Michael," which has good painting and learned-looking armor, and Mr. G. R. Barse has a very small and very pleasing canvas called "Remembrance."

The next picture, in point of size, to Mr. Major's "St. Genevieve" is Mr. Willard L. Metcalf's "Kousse-Kousse Market—Tunis," a picture *mentionné* at the Paris Salon, and a clever piece of Orientalism, with much able painting of white walls and bournouses, but a thing that leaves one a little cold. Two or three little impressions of landscape by the same painter are far more interesting. In Mr. Howard Russell Butler's Mexican scenes, white walls in sunlight play as great a part as in Mr. Metcalf's Tunis, and his pictures look almost as Oriental and quite as well painted as the latter's. Genre subjects of a more familiar sort are painted by Mr. Chase and Mr. Wiles, with their accustomed brilliancy, in the pictures of "Afternoon Tea" and "Idleness." Mr. Theodore Robinson's "Study" of a woman at the piano is a beautiful bit of atmosphere and sentiment, and Mr. Francis Day's "Late for Breakfast" contains some charming painting. Two small canvases of somewhat eccentric composition, but great originality and beauty of tone and color, are by Mr. William S. Allen.

The collection is rather less strong in landscape than in other departments, but contains, nevertheless, some admirable pieces of work. M. Tryon has an "Evening," with the moon rising above a hill on which a cottage is seen against the sky, which is a delightful bit of tone and color, and a larger picture called "The First Leaves," which gives a wonderfully truthful impression of early spring. The composition is singularly simple and unaffected, and the painting is summary, but the total effect is convincing, and the more one sees of it the more one admires it. Mr. Tryon is just within the age-limit of the Webb prize, and has received it by a nearly unanimous vote. One of his rivals was Mr. Henry G. Dearth—a comparative new-comer—whose "Evening" is an exceedingly handsome piece of color and of sentiment. Mr. Coffin shows two pictures, called respectively "Moonrise" and "Evening Shadows," which, while not equal to the best work he has shown, are nevertheless noticeable for quiet and sound painting, and Messrs. Bolton Jones, Murphy, Dewey, and Bruce Crane are all fairly represented. There is a curious interest in seeing the methods of Mr. Thayer applied to the drawing of mountain forms in his "Landscape," which makes it one of the pictures to be studied. Mr. Van Boskerck has three pictures, of which the largest, "Sand-Dunes by the Sea," is fine in light tonality and brilliant color, though not devoid of the over-accentuation of little things which is his greatest fault, and Mr. Bogert has an "August Twilight" which is a handsome scheme of bluish grays, and an inferior and somewhat bituminous canvas called "The Beach at Night. Besides these there are a number of little landscape studies which show, in greater or lesser degree, the influence of Claude Monet. Besides the work of Mr. Metcalf, already mentioned, these include pictures by Theodore Robinson, Theodore Wendel, and Henry F. Taylor. Mr. Robinson's are the best and Mr. Wendel's the most extreme of them. They are worth study as showing the methods by which the impressionists of to-day seek to render effects of light and air, and the best of them are delightful, while the least successful are at least interesting.

Besides his portrait and genre, already mentioned, Mr. Chase has a number of those little studies of parks and docks which are so well known and which it is hard to classify, but which are sure to be among the greatest attractions of any exhibition where they are found. Mr. Horatio Walker's pictures may also puzzle the classifier, but that they are wonderful pieces of subdued color and of tone no one can doubt. He has here a "Morning" and an "Evening," the first showing the pigs which he characterizes so well, and the second representing a herd of cattle driven home by early moonlight.

There are only two bits of still-life in the galleries, but they are by Emil Carlsen, which is equivalent to saying that they are thoroughly and soberly painted, and among the best of their kind. The only flower-piece that we have noted is Miss Beach's "Scotch Roses," which is a delicate and refined bit of painting. The absence of the conventional "still-life" and "flower-piece" is no more to be regretted than the almost total lack of those "marines" which seem to require less artistic training and less knowledge of nature in their production than any other form of art.

Besides the oil paintings there is a water color by John La Farge of "Fishing with Cormorants in Japan," and there are three pastels, the best of which is a charming head by Miss Caroline T. Hecker. There are but three bits of sculpture, a bronze "Portrait in Low Relief," by Mr. St.-Gaudens; a "Portrait Bust" in plaster, by Mr. Elwell, and a "Portrait Medallion," by F. W. MacMonnies, also in plaster. Mr. MacMonnies is a pupil of St. Gaudens's who is now studying in Paris, and we believe that this is the first bit of his work publicly shown in New York. It is amazingly clever in modelling, and shows besides a very considerable feeling for character. As the work of a very young man, it must be considered eminently promising, and if its author has "staying power" at all commensurate with his native talent, he is likely to go far.

We have but skimmed the cream of the exhibition, and there remain other things well worthy of study, and few that are not very good; but we cannot reproduce the whole catalogue, and must needs stop here with a reiteration of our statement that this is the best exhibition of the year, and deserves a visit from any one interested in native art.

A HISTORY OF TENNESSEE.

By James Phelan, M.C. With a Map.

Crown 8vo, $2.00.

"Mr. Phelan has done a very creditable and scholarly piece of work. He has written a State history that deserves to stand with the best of those in the Commonwealth series."—*Theo. Roosevelt, in Political Science Quarterly.*

"A history which deserves much commendation; which is at once careful and animated, sufficiently detailed to be clear, and sufficiently broad of outline to be comprehensive; which certainly presents the making of an American State with marked fulness of apprehension and grasp of particulars; which is the result of honest study, as is shown by the long list of references appended; and which is written in an easy, unstrained, and picturesque style."—*New York Tribune.*

"A meritorious and important volume."—*New York Times.*

"One of the best, if not the very best, among such histories of our American commonwealths."—*The American, Phila.*

HOUGHTON, MIFFLIN & CO.,

BOSTON.

11 East Seventeenth Street, New York.

The Nation.

NEW YORK, THURSDAY, MAY 30, 1889.

The Week.

Two more names must be added to the list of Harrison's relations who have received "plums" from the President's hands. Col. D. W. McClung, a cousin-in-law, his wife's father being a brother of the President's father, has been appointed Internal-Revenue Collector of the First Ohio District. It is further announced by the *World* that Lieut. Parker of the United States Navy, who has been assigned to the pleasant post of naval attaché to the Samoan Commission during its sojourn in Berlin, married a niece of Mrs. Harrison, and is, therefore, a nephew-in-law of the President. At the time of his assignment he was stationed at Mare Island Navy-yard, at San Francisco, but the Presidential eye, made keen by the determination for self-satisfaction, at whatever cost, was able to discover him and bring him East in time to start for Germany with the commissioners. The amended list of family office-holders now reads:

(1.) The President's brother.
(2.) The President's father-in-law.
(3.) The father-in-law of the President's son.
(4.) The brother of the husband of the President's daughter.
(5.) The husband of the daughter of the President's brother.
(6.) The husband of the niece of the President's wife.

We should like to appeal to the Cleveland *Leader* for information as to the proper definition of "nepotism," which it declared meant the appointment of "several" relatives to office. Do six relatives fill the bill?

On the 26th of March, 1886, Benjamin Harrison, then United States Senator from Indiana, delivered in the Senate a long speech, arraigning Grover Cleveland for breach of his pledges in the matter of civil-service reform. One of the chief counts in this indictment was what Gen. Harrison called "the story of Mrs. De la Hunt," his telling of which occupies the greater part of one of the large pages of the *Congressional Record*, vol. xvii., part 3, page 2794. "I have another case," Gen. Harrison began; "I do not know how it may seem to the Senate, but to me it is infinitely full of pathos and indignation." He proceeded to describe the military career of Maj. De la Hunt of the Twenty-sixth Indiana Volunteers, who was brought down by a wound entirely through the body, at Prairie Grove in Arkansas, and, after recovering from this desperate wound, rejoined his command and received a bullet through his arm. "Disabled by these two wounds received in his country's service, he was compelled to leave the army and return to Perry County, Indiana. But his days were few. His vital forces had been so sapped by the wounds which he had received that it was not long until a sorrowing widow and one only child followed the remains of as brave a soldier as ever went out from Indiana to his last resting-place in the grave." Maj. De la Hunt left his widow with small means, and she entered upon the work of maintaining herself and her boy. Her old father was Postmaster at Cannelton, and she became his deputy, in which capacity Gen. Harrison testified that she was "most efficient." Shortly before the expiration of President Arthur's term, said Gen. Harrison, "Isabelle De la Hunt, the widow, was appointed, on my request, by Gen. Hatton, then Postmaster-General, to this little post-office." "If there was in all this country," continued Gen. Harrison, "one person who by reason of her sex, who by reason of her widowhood, who by reason of the sacrifice she had made in giving the arm on which she leaned to her country's service, was entitled to be kept in office, was entitled to have her reputation guarded jealously and by all men who represented the Government, it was Isabelle De la Hunt." Nevertheless, the Cleveland Administration removed Mrs. De la Hunt, on the false charge of "offensive partisanship," and appointed a Democratic "worker" in her place.

The Cleveland Administration having gone out, and Gen. Harrison having become President, Mrs. De la Hunt applied for restoration to her old position as postmaster. There was no doubt as to her fitness. The present President publicly testified three years ago to the fact that she had been "most efficient." There was no doubt as to her title to the office. The present President on the same occasion bore witness to it, as above. There was no doubt as to local sentiment demanding the restoration of this most efficient and worthy person to her old office. She presented a petition more numerously signed than that of any other applicant, and representing an overwhelming majority of the patrons of the office. Of course, she was reappointed to her old position as soon as her old champion, Benjamin Harrison, became President? On the contrary, the office has been given to John Zimmerman, who has been Chairman of the Republican County Committee, and whose only claim to the place is party service. In preference to any comments of our own, we simply reprint the comments of Benjamin Harrison:

"Now, Mr. President, perhaps my distinguished friend from Kansas, whose command of language so far surpasses my own, might characterize this transaction, perhaps he could touch it up a little; but to me that work is impossible. *The story of Mrs. De la Hunt carries its own pathos and its own indignation.*"

There was a rather sombre interview between Senator Farwell and the President touching the appointment of Mr. Wilcox as Collector of Internal Revenue in the Springfield District. The version given by the former to a Chicago newspaper says:

"I told him this appointment belonged strictly to Senatorial patronage, which was already very meagre in comparison with that of Representatives, and should not be further abridged. I told him that Senator Cullom and I had consulted about a proper person to appoint to fill this vacancy, and intended in due time to make our wishes known. Under these circumstances, I told him, we regarded the appointment of Wilcox, without consulting us, as a violation of established custom and as extremely invidious towards Senator Cullom. I told him that Springfield was Senator Cullom's home, and that to make that appointment and in that way was tantamount to a declaration of war on Senator Cullom, and, indeed, a blow between the eyes. I entreated him and appealed to him, in the interests of justice and humanity, to revise his action. My appeal had no effect."

If any such words were spoken by the Senator from Illinois, they probably had an effect quite the contrary of what was intended. Such language assumes, in the first place, that an old Senator, like Mr. Harrison, needs to be told by a new Senator, like Mr. Farwell, what appointments "belong strictly to Senatorial patronage." Mr. Harrison does not need any instruction under that head. Nor does he need to be told that Mr. Farwell and Mr. Cullom had taken this particular appointment under advisement and intended to let him know their decision in due time. Considering that these Senators have no constitutional right even to know who is appointed until the name comes before them for their official action, it is a remarkable exhibition of assurance to tell the President that *they* were giving diligent attention to a subject which was his sole and exclusive business. The naïveté of Mr. Farwell's observations marks an advanced stage of ideas respecting the uses of patronage. It has been customary heretofore to fight out such battles in secret. When a Senator takes the public into his confidence, and appeals to the neighborhood for support against the President because the latter has done what the Constitution expressly authorizes and requires him to do, it is a sign that the ideas prevailing in George Washington's time on this subject have been turned topsy-turvy.

The thoroughly commercial character of the current Republican conception of public office was brought out strongly by the interview which the delegation of patronage-seekers from Brooklyn had with the President on Thursday. They went to urge, among other things, the appointment of Theodore B. Willis as Surveyor of the Port of New York, and their chief argument was that Mr. Willis came from a ward in Brooklyn which "was made famous by the fact that it had alone raised a contribution of $50,000 for the campaign fund." The President showed no surprise that the money basis for the claim should be revealed so frankly, probably because he is accustomed to that kind of thing now.

The whole energy of the Republican press is now devoted to efforts at proving that Harrison is no worse than Cleveland. As a matter of fact these efforts are unsuccessful. Harrison is not doing as well as Cleveland. The latter came into office as the representative of a party which "had not had a smell of the offices" for twenty-five years, and yet he

allowed the larger proportion of the Republican incumbents of four-year offices to serve out their terms, so that the commissions of Republican postmasters were expiring all through the last months of his Administration. Harrison, on the other hand, although representing a party which controlled all the offices from 1861 to 1885, and a large share of the most important ones for longer or shorter periods between 1885 and 1889, removes efficient public servants in the middle of their terms, openly and avowedly because they are Democrats. Cleveland took for his rule of conduct—although he did not live up to it in many cases—the principle that the public interest should decide whether or not a Republican incumbent should be retained. Harrison accepts that article of the Republican creed which holds that a Democratic office-holder has no rights which a Republican President is bound to respect; that, indeed, the ten commandments, strictly interpreted, contain a prohibition against any Democrat's drawing a salary out of the Federal Treasury. Any candid person, contrasting the moderation exhibited by the Democratic Administration four years ago with the rapacity now shown by the Republicans, must confess that it is not true that Harrison is no worse than Cleveland.

The visit of Civil-Service Commissioner Roosevelt to the Custom-house has occasioned some disturbance in the councils of the local examining board. This is the best possible evidence that Mr. Roosevelt's presence was needed. The most insidious danger that threatens the Civil-Service Law is infidelity and treachery on the part of those appointed to administer it. The politicians and henchmen for a long time refused to believe that the law was meant to include them. They thought that it was only intended for greenhorns. When they found that it really did apply to them as well as others, they set about plans for circumventing it. One plan was to establish an underground connection with the examining boards. We have long suspected that a private runway of this kind existed at the Custom-house. Mr. Roosevelt appears to have secured a thread to the labyrinth, and has made a good beginning, and we hope, and have no doubt, that he will follow it whithersoever it leads.

Three more States are likely to be added to the list of those enacting ballot-reform laws before the present legislative year closes, bringing the total up to eleven. The Connecticut House passed on Wednesday week an excellent bill, by a vote of 183 to 9, the opposition being made up of 5 Republicans and 4 Democrats. Many Democratic members voted with the Republicans in favor of the bill, though they would have liked it better had it contained a provision for the grouping of candidates' names by parties. It has since passed the Senate and now awaits the approval of the Governor. A bill containing the principal provisions of the Australian system passed one house of the Illinois Legislature on the same day, and one has been reported from Committee to the Michigan Legislature, and its passage is said to be assured.

There appears to be a very general consensus of opinion in Connecticut that its present Legislative Assembly has proved itself to be the most venal and corrupt that ever has figured in the experience of the State. The measure of chief interest and importance that has been before it was the application of the Housatonic Railroad Company to be allowed to construct certain branch roads, which, if constructed, it was perfectly well understood, would, in connection with existing lines, practically constitute a parallel and competing road with the New York and New Haven Railroad; and such a result of course it was for the interest of the latter road to obstruct and prevent. The matter came up originally on petition of the Housatonic corporation, was referred to the appropriate committees, was argued pro and con by able counsel, and finally reported on adversely by a majority of the Committee. The question whether the public interest would be promoted by a parallel and competing road was the least of the considerations before the House, although some attention was given in a perfunctory way to that branch of the subject. It was early perceived that money would decide the question one way or the other. The scent of carrion is not more potent to draw buzzards to its neighborhood than was the prospect of boodle to bring all the outside legislative talent to the lobbies of the State House at Hartford. As these people never work for fun, it is to be presumed that they were duly commissioned and had their pockets filled by the high contesting parties. As the work went on, nearly all pretence of secrecy was abandoned. There may have been other similar experiences in Pennsylvania, under Kemble's management, or in South Carolina under the rule of Moses, but New England has never before seen anything comparable with it in its Legislative Assemblies. Liquor flowed like water, although a majority of this precious Legislature voted in favor of constitutional prohibition. There was carousing by day and carousing by night on the part of the ingenuous workers and their friends; and every restaurant in Hartford that could satisfy the hungry and thirsty, and had an apartment where things could be talked over confidentially, enjoyed an increased run of business. Under such circumstances, conversions went on rapidly, and in the main adversely to the Housatonic.

The Vedder Liquor-Tax Bill, as finally passed by the late Legislature and sent to Gov. Hill, is a very different measure from what it was as passed by previous Legislatures. We criticised it in its former shape very severely because it taxed the liquor traffic in New York and Brooklyn from two to thirteen times as heavily as in other parts of the State, and made the entire proceeds of the tax go into the State Treasury. Our objection was that the cities of New York and Brooklyn would be thus compelled to pay about three-fourths of a tax which was estimated as likely to amount to over $3,000,000 annually, the remainder of the State paying only one-fourth. New York city alone would have had to pay nearly two-thirds of the entire tax. We urged that the tax ought to be uniform over all parts of the State, and that the proceeds from each county should go into that county's treasury, rather than into the State Treasury. Mr. Vedder has finally come to our way of thinking, for his bill as passed levies a uniform tax of $100 upon all sellers under what is known as a full liquor license, and $20 upon those selling under a beer license, and provides that while the proceeds shall be paid into the State Treasury, each county shall be credited with the full amount collected from the traffic within its limits, the same to be deducted from its State tax. This makes the measure a desirable one in every respect. It levies a reasonable tax upon the traffic which is certain to be collected, because the duty of its collection will belong to the regular State officials, and payment can no more be avoided than in the case of any other State tax. It would be a tax over and above all existing license and excise fees, and would operate as a distinct and important check upon the traffic. In many parts of the State it would much more than double existing license rates. In Brooklyn the liquor-license fee is only $100, while in many of the smaller cities of the State the fee runs as low as $50. If the Governor cannot make up his mind to sign the Excise Bill which is before him, he ought certainly to be able to approve this Tax Bill. It will be very difficult for him to find plausible reasons for not signing it.

The Mayor has now made twenty-three important appointments to public office, and, with a single exception, every salaried position has been given to a man who is either a member or about to become a member of Tammany Hall. In his letter of acceptance, the Mayor himself set the standard by which his conduct should be judged. He declared in that letter that the success or failure of any Mayor's administration "will ultimately depend upon the manner in which he shall exercise the appointing power," and as a pledge of the way in which he proposed to exercise it he said: "I shall prescribe no other test than honesty and special capacity for the offices to be filled. . . . I pledge myself to be guided in its exercise solely by a determination to secure for the people the very highest order of public servants that the citizenship of the county affords. . . . The municipal offices are the property of the people. I would have no more right to use the public service for my own purposes than to use the public treasury to pay my private debts. . . . In exercising the appointing power, I will not be moved by considerations of personal friendship, nor will I be affected by any individual preferences." Measured by this self-imposed standard, an overwhelming majority of the twenty-three appointments are ludicrously wanting in nearly every respect. All the most important positions have been filled by personal friends or "cronies." This

is so obviously the case that the Mayor, five months after coming into office, finds himself without a single city newspaper of any standing which is able to defend him. Those which had most faith in him at the outset are now his severest critics.

The Detroit *Tribune's* blighting exposure of Prof. H. C. Adams's lectures on political economy in the University of Michigan has brought out a great deal of "testimony" from members of the State Legislature. Mr. F. F. Hoaglin, Chairman of the House Committee on Municipal Corporations, writes to the *Tribune* to say that "new text-books should be adopted in the University which will teach something nearer to American ideas." Senator Chapman thinks that "it is high time our boys were hearing both sides of this question, and having text-books of both complexions in their hands." Senator Fox is of the same opinion, but he makes the natural mistake of saying that there is an abundance of literature on the side opposed to Prof. Adams, meaning that there are plenty of text-books to be put into the hands of students that would refute Prof. Adams. Would not these simple-minded Senators mention the titles of some of these text-books? We have never heard of them. We know the contents of most of the text-books of political economy in the English language. We do not know a single one that teaches or supports the doctrines to which the Republican party is now committed. We therefore repeat our suggestion that the editor of the Detroit *Tribune* should prepare one for use in the University of Michigan. As it is not likely that a Faculty which tolerates the heresies of Prof. Adams would approve such a text-book, it might be submitted to the criticism of Representative Hoaglin and Senators Chapman and Fox. Fortified with a text-book so certified, the University of Michigan would undoubtedly draw students from all parts of the English-speaking world.

Society is deeply stirred at Quincy, Ill., by the death from croup of an infant whose mother was a "Christian scientist." When the child became ill, a practitioner of Christian science, one Mrs. Dr. Hinckley, was called, and, after making a diagnosis, said that it was a mistake to suppose that the infant was sick. On the contrary, it was well. It could not be alleged that the child had a "belief," and that this belief was the cause of its apparent distress, since it was too young to have beliefs extending beyond the range of the nursing bottle. But that it was not sick was the confident assurance of Mrs. Dr. Hinckly. An hour and a half later, when the mother lifted the child out of its cradle, it was dead. No regular physician was called until it became necessary to procure a burial certificate. Then the facts became known. The mother was not an ignorant woman. She was a person moving in the best society of the place. She was not a heartless woman. On the contrary, she was and is nearly distracted with grief at the loss of her babe. Her understanding of the mishap is, that "her mortal mind was not strong enough to hold it; she left it but a few minutes, and it slipped away." This phase of Christian science implies that in a case where the patient is too young to wrestle with a "belief," its mother, if possessed of sufficient will-power, can vicariously throw off the illusion which takes the form of croup, measles, scarlet fever, or any disease whatsoever. There are sects in "Christian science," and the sectaries are at bitter feud with each other. What sect Mrs. Dr. Hinckley belongs to is not stated in the local accounts of the affair, but it is apparent from the newspaper comments that public opinion in Quincy is pretty strongly in favor of sending somebody to jail. It is time that an example was made of this felonious humbug. The laws of most States are sufficient to secure sick babies against homicide at the hands of Christian science if they are properly enforced.

The renewal of gold exports has had no adverse effect upon trade or speculation, and there is no reason why it should have any. As the *Financial Chronicle* shows, the entire export of gold since January 1, 1889, has been only $17,000,000. In other words, it has been little more than our production of gold during the same period of time, the yearly production being about $34,000,000. The *Chronicle* notes also a practice growing up, in the negotiation of time loans, of inserting the word gold as the kind of currency receivable at maturity. This is a commendable practice, especially in view of the preparations making by Senator Stewart and others to bring the country to a silver basis. If any such project should be carried out by Congress, let those who are fond of silver have silver, and let those who prefer gold have gold. Nothing can be fairer than that. It costs nothing to make gold contracts, and every such contract made adds at least one interested party to the political force opposed to the destructive aims of the Nevada Senators.

A correspondent, writing to us on the subject of the importation of Mexican silver-lead ores, directs our attention to two rulings of the Treasury Department which are supposed to be in conflict with that of Secretary Sherman in 1880, which is now in force and which governs the assessment of duty on such ores. The rulings are cited as follows:

Ruling of Treasury Department by letter dated November 16, 1875:

Silver bullion is free, but silver-lead bullion, no matter how much silver it has in it, is taxed as *lead* bullion.

Ruling of same, July 5, 1888:

All copper in silver-copper ore shall be subject to duty.

The answer as to the second quoted ruling is, that the law provides in so many words that the amount of pure *copper* contained in any ore shall be dutiable at 2½ cents per pound. There is no such provision of law regarding the *lead* contained in any ore. As to the other ruling, we observe that it relates to bullion, which is a finished product, and not to ore, which is a raw material.

"Mr. P. Egan's nomination has been cabled, and we hope it will not be confirmed. Americans, English, and Chilians also look upon it with great disfavor." The above is an extract from a private letter dated Santiago, April 5. The writer's party preferences do not appear, and have no part in forming the sentiment we have quoted. He is one of the thousand American citizens residing in Chili, anxious only that this country should be respectably represented in the person of the Minister sent to the Government under the jurisdiction of which they are living. It has already been abundantly shown that the choice of Mr. Egan is altogether bad from the point of view of our domestic politics; our correspondent shows how bad it will be in its influence upon our commercial relations with Chili and upon the interest of many American residents in that country. Mr. Egan cannot hope to be known there in any other guise than as a creature of Mr. Blaine's; and he could have no worse credentials. To invite Chili to a conference in order to discuss ways of extending our commerce with her, and then to send her as a Minister a henchman of the American whom she justly regards as her worst enemy, and a fugitive from the country with which she stands in the closest relations, is little short of insulting. More than that, there are American claims pending against Chili, for damages caused in the Peruvian war, and the American Minister to Chili ought to be a man able to pick up the threads of the negotiation for a tribunal of arbitration to settle them. Minister Roberts had the matter well in hand before his recall. Who supposes that Patrick Egan is a proper person to take charge of an affair of such intricacy and delicacy? Who supposes, for that matter, that either President Harrison or Mr. Blaine thought he was, or cared whether he was or not?

In French newspaper-slang, "bouillon" means that portion of any day's issue of a paper that remains unsold. The French papers have the custom of taking back from the keepers of the kiosks the whole, or a part, of this surplus every day. This seems to have suggested to the kiosk-keepers a little trick by which to increase their revenue, and some of them have been in the habit of lending out copies of the various journals to cafés and wine-shops in their neighborhood, receiving them back at night, and returning them to the newspaper offices with the "bouillon" next morning. A few weeks ago the *Figaro* engaged a sheriff's officer to make a round of the wine-shops in a suspected quarter, calling for a "bock" and the newspapers in each place, and leaving a private mark on each copy of the *Figaro* that was given him. The next morning he went over the same ground with the "bouillon" gatherers, and discovered many marked copies of the paper in the "bouillon." The *Figaro* thought best not to proceed in a criminal suit against the fraudulent kiosk keepers, but sued them for damages before the tribunal of the Seine, which has just compelled five of them to pay from ten to thirty-five francs apiece.

THE HUNDREDTH YEAR OF THE PRESIDENCY.

THE last number of the London *Economist*, now the most philosophic of English periodicals, has an article on the place of the American President in popular estimation, apropos of the extraordinary honor with which President Harrison was received in the late Centennial ceremonial. It maintains that the way in which the President has gained in strength and respect during the past hundred years is the most remarkable phenomenon in the history of modern democracy. Kings have been running down steadily in popular estimation during that period. Aristocracies are nowhere, and representative legislative assemblies, which, at the beginning of the century, seemed the hope of mankind, have distinctly fallen into a sort of contempt. During all this period, however, the *Economist* thinks, the President has been gaining in weight and authority, and was, in the celebration of the hundredth anniversary of the Constitution, not only the recipient of more than royal respect, but the most conspicuous and interesting figure of the occasion in the eyes of the multitude.

This is the view of an acute observer looking on from afar, but it only shows how many things escape such observers. Mr. Bryce described the President's actual position much more accurately when he said that

> "the difficulty of forming a just estimate of the President's power arises from the fact that it differs so much under ordinary and extraordinary circumstances. . . . In ordinary times the President may be compared to the senior or managing clerk in a large business establishment, whose chief function is to select his subordinates, the policy of the concern being in the hands of a board of directors. But when foreign affairs become critical, or when disasters within the Union require his intervention, . . . everything may depend on his judgment, his courage, and his hearty loyalty to the principles of the Constitution."

And Mr. Bryce touches with remarkable perspicacity on the cause of the imposing figure cut by the President on such occasions as that which called forth the *Economist's* remarks; that is, "the larger a community becomes, the less does it respect an assembly, the more it is attracted by an individual man." In other words, by being raised as much as he is above the mass, the President becomes in the popular eye the one really picturesque figure in the country. His house, his mode of life, his habits, the state he assumes, if any, all touch the popular imagination, which is gratified in the highest degree by seeing him play the leading part in a great historic function like that of the Centennial. The interest in his inaugural ceremonial is of much the same kind. Nobody supposes it to have much, if any, political significance, but it is, nevertheless, watched with intense eagerness, and its smallest details are carefully reported.

The point on which the *Economist's* view of the present position of the Presidential office is most defective, is the immense influence of the spoils system in depriving the office of the weight and authority intended for it by the Constitution. This has been so great as to make the honors paid to the President on ceremonial occasions even more deceptive as to his real power than those paid to the Queen of England. When Bishop Potter was pointing out, in St. Paul's Church, the difference between the attitude of Washington towards office-seekers and that of President Harrison, he had only the moral aspect of the matter in mind, but he was really touching on a political fact of great moment. The truth is, that the Presidential office, as defined by the Constitution, has been profoundly modified by the obligation imposed on the President by his party of treating nearly all the offices of the Government as virtually vacant as soon as he comes into power. It is this which, more than anything else, has diminished the authority of the President in his relations to the other branches of the Government, and must, as long as it lasts, continue to diminish it. By submitting to it, a succession of Presidents have, to all intents and purposes, surrendered illicitly a considerable portion of the power bestowed on them by the Constitution, and greatly impaired that separation between the legislative and executive functions which its framers intended should be a prominent and most important feature of the Government. In fact, a change has been effected in the position of the President which, if proposed to the people in the shape of a constitutional amendment any time within the last hundred years, would have been rejected with scorn, and which, in any constitutional convention, would be received with laughter, not only as a political novelty, but as a business absurdity. Not only has no administrative experiment like "the spoils system" ever been seriously tried, but it has never been seriously discussed in any deliberative body.

It is to be observed, too, that in all probability this degradation of the Presidency and transfer of a large portion of its authority to the Senate and House of Representatives, could never have been effected if the burden of the appointing power had been kept within natural limits. Had tenure during good behavior been the rule of the Government service as it is of all private service, and had vacancies been created only by death, or resignation, or dismissal for cause, there is hardly a doubt that the President could have successfully maintained his constitutional rights against the boldest and most persistent attempts at usurpation on the part of the Senate. He would have been quite competent to make the selections necessary for the proper conduct of the Government business, without calling in the assistance of the Legislature, if the selections had been no more numerous than they would have been under a private employer.

What has wrested from him the control of the Administration is the doctrine that every change of party vacates *de jure* all the offices, and that the victors at the elections are entitled to have them filled with their own nominees as soon as the physical labor of the operation can be performed. When this was conceded, the position of the President under the Constitution was greatly changed, simply because no one man can direct or control "a clean sweep." He has to delegate to others the conduct of the process, and confine himself to the humble rôle of countersigning their orders. One of the most striking illustrations of the uncertainties of political development is to be found in the fact that the man who first began this remarkable departure from the original design of the Constitution regarding the Presidency, should have been the most masterful and self-asserting President we have ever had, the last man knowingly to permit or connive at any diminution of the Presidential authority. President Harrison's weakness and insignificance to-day is, in fact, the natural and logical consequence of President Jackson's arrogance and insolence fifty years ago.

THE NEW PENSION POLICY.

"IN appointments to every grade and department," said Gen. Harrison in his letter of acceptance, "fitness and not party service should be the essential and discriminating test, and fidelity and efficiency the only sure tenure of office." Perhaps the most flagrant breach of the engagement thus entered into by the present President, certainly the one which threatens most harm to the public interest, was the appointment of Tanner as Commissioner of Pensions.

The regular expenditures of the Pension Bureau now far exceed the total cost of the whole Federal Government before the war. In other words, the Commissioner superintends the disbursement of a much larger sum than all the heads of departments together prior to 1861. Moreover, in a peculiar sense the head of the Pension Bureau is the custodian of the national honor. The patriotism of the Union soldier is a source of pride to the whole country. Every right-minded man desires that the volunteer's reputation for self-sacrificing devotion shall never be tarnished. The Commissioner of Pensions wields more influence than any other officer of the Government in deciding whether the Union soldier shall go down to history as a patriot, or as a mercenary who apparently entered the army chiefly to see how much he could make out of it. For some years there has been a strong tendency on the part of many old soldiers to convert their supposed patriotism into a club for securing undeserved pensions. The Grand Army organization unhappily fell under the control of this set, and has been transformed largely from its original conception of an association of former comrades for mutual advantage into a money-making machine. Of course it soon drifted into politics, and for some time past has used its power as a means of demanding offices and "bulldozing" officials.

President Cleveland's veto of the Dependent Pension Bill—an act which extorted the commendation of even such Republican papers as the Philadelphia *Press*, the Cincinnati *Commercial Gazette*, and the Chicago *Tribune*—temporarily arrested this dangerous and demoralizing tendency. His reelection would have given assurance that moderation would continue the rule for four years more. The election of Harrison aroused apprehensions of a change for the worse, but

nobody supposed that it would begin to be so bad as it already is. For the most important, responsible, and delicate office of Commissioner Gen. Harrison picked out—no, that is not the proper expression; he allowed to be shoved upon him—a loud-mouthed Grand Army stump-speaker. Anybody who knows anything about Tanner would have laughed in derision at the suggestion that fitness to discharge the duties of the place ever dictated his choice. It was simply, solely, and avowedly a reward for party service demanded by the Grand Army machine.

When the Democrats came into control of the House of Representatives fifteen years ago, an amusing Texas politician named Fitzhugh, who was chosen doorkeeper, leaped into fame by writing a letter in which he complacently described himself as "a biger man than old Grant." Tanner considers himself not only a bigger man than old Harrison, but more powerful than the legislative department of the Government as well. No sooner was he established in office than he began overruling any adverse decision which had been made, and allowing any fellow a pension who would take the trouble to ask it. Being invited to attend the recent Scotch-Irish Convention at Columbia, Tenn., he prepared with care a speech announcing "my policy," which he took pains to have sent all over the country by the Associated Press. In the course of this speech he said that there are 33,871 men upon the pension roll who receive not over $3.75 per month, and continued: "For twenty years I have been able to only plead, but now I am thankful that at these finger-tips there rests some power, and as that power is mine, I broadly say that I propose, just as soon as possible, to call in every one of the certificates of pension the figures of which I have just named, and reissue them on the basis of the truth, that no man ought to be down on the pension roll of the United States for less than the miserable pittance of one dollar per week, though I may wring from the hearts of some the prayer, 'God help the surplus!' This, and some other things too numerous to go in detail about, I propose to do, if my life be spared and my official existence be not cut short."

Of course, every intelligent man knows that Tanner really has no such power as he here egotistically claims to possess; but he can go ahead, and then ask his critics Tweed's question, "What are you going to do about it?" He has the Grand Army machine behind him, and he can threaten its displeasure upon any politician who ventures a protest. Tanner represents the "soldier vote" which is so much talked about, and he is ready to "use it for all it is worth."

We note, however, signs that there are Republican newspapers which recognize that there are worse things to be dreaded than the hostility of the Grand Army machine; that there is a taxpayer vote which counts for more than the "soldier vote" when it is once aroused. The pension expenditures of the current fiscal year will exceed the appropriation of $88,400,000, and it is already estimated that the bills for the next fiscal year will reach $95,000,000. This is a greater amount than the cost of the entire military establishment of Germany, under which the people of that nation groan so loudly. But if Tanner can have his way, the pension expenditures will soon be nearer $200,000,000 a year than $100,000,000. In fact, there is no telling where he would be content to stop.

Can the Republican party stand such a riot of pension extravagance? This is a question which Republican papers are beginning to ask, only to answer in the negative. "Pension-Commissioner Tanner," says the Philadelphia *Press*, "has a mania on the subject of pensions, which was the chief objection raised to his appointment. He would apparently like to pension everybody and everything. But he should realize where the pension money comes from, and also that it is no satisfaction to a deserving veteran to know that undeserving ones are on the rolls. While the people generally believe in liberal treatment of the veterans, they want the really deserving ones to get the money. The annual expenditures for this purpose are now rapidly climbing up to $100,000,000, and it is time to go slow." In the same line are the comments of the Philadelphia *Bulletin*, which says:

"It is evident, in the Commissioner's judgment, any man who donned the uniform of a soldier in the war of the rebellion is entitled to a pension, whether the wearer saw a battle or received a wound; and so far does his sympathy with soldiers go that it has outrun the Union veterans and includes the Confederates as well. If there is anything like a plausible reason why a man should have a pension, Commissioner Tanner seems to have made up his mind that the reason shall be utilized to the benefit of the applicant. In his judgment, it is probably better that a thousand undeserving men should have pensions than that one deserving man should fail to get his.

"It may be doubted very much whether the Union veterans who were most gratified at Commissioner Tanner's appointment will be altogether pleased at his extreme zeal in endeavoring to enlarge the pension roll. It is not an honor to them, or to those of them who are drawing pensions as rewards for their valor in the actual service of the Government, to find themselves classified with men who cook up 'claims' for services which, if not bogus, need to be covered over with a good deal of specious reasoning in order to obtain a standing under the law. In encouraging this order of claimants, Commissioner Tanner not only destroys the value of the pension list as a roll of honor in the eyes of the Grand Army of the Republic, and, indeed, of all citizens, but he fosters, no matter how good his intentions may be, the arts and tricks of the tribe of pension shysters who are always ready to corrupt and demoralize this branch of the public service. They need to have the lines tightened upon them and not loosened."

Here appears the irreparable mischief which Gen. Harrison has inflicted by his refusal to keep the solemn pledges upon which he sought and obtained the Presidency. Republican organs are to-day forced to cry out in indignation against the outrageous course of the Pension Commissioner, simply because the President did not make "fitness the essential and discriminating test" in filling the office, as he said he would, but did make "party service," as he expressly engaged that he would not.

THE BRUTALITY OF CIVILIZATION.

THE disgraceful scenes which have accompanied the opening of that part of the Indian Territory known as Oklahoma to white settlers are putting no check to this legalized trespassing on the lands of the Indians; and a committee of the United States Senate is about to begin negotiations with the Cherokees for the part of their possessions in the Indian Territory known as the "Cherokee strip." There is no doubt that the proposition to take this land from its owners comes entirely from the white men, and is with practical unanimity opposed by the Cherokees. But there are indications that there is a determination to make short work of this opposition, and even to treat with scorn those provisions of the Cherokee Constitution under which alone the voice of that people in the matter can be legally obtained. A United States Senator is quoted as saying that unless these Indians do what, under their laws, they cannot do—that is, call a council at once to consider the matter—Congress will pass a law opening their lands to settlement without giving them any voice on the subject; and a leading California journal has declared that the Government cannot evict the settlers who have entered these lands in violation of the most solemn agreements, and that there is "practical justice" in what it is not ashamed to call "this crowding-out game."

If some critic of our Government wanted to bring the most direct proof of the perfidy of the people of the United States towards the original owners of our soil, he would cite our dealings with these Cherokees. When Oglethorpe came over from England in 1733 with his paupers to found a colony, he landed in the Cherokees' country. He found them ready to welcome him, and eager not only to learn from him the arts of civilization, but to be instructed in Christianity. He encountered implacable enemies in the white Spaniards and Frenchmen, but only allies and defenders in the Indians, whom no bribes could win away from him. But the trustees of the colony in time abandoned the enterprise, and a royal government was set up. Then came bad faith with the Indians and resultant wars, and out of these came, in 1763, the inevitable treaty. By this they ceded a large tract of their lands to the whites. The Cherokees remained loyal to the British during the Revolutionary war and were great sufferers by it. White men steadily encroached on their possessions, and when they came to deal with the Government of the United States, one of their first requests was, as it will be now, that the trespassers should be removed. The Government professed its inability to do this, and another agreement was made in 1785, by which the Indians accepted pay for their lost territory. Four years later the Secretary of War reported to the President that "it has been proved that the said treaty has been entirely disregarded by the white people." Again the treaty swindle was made use of, and a new agreement, in 1791, was made, under which the Cherokees were to receive $1,000 a year for the lands of which they had been robbed, and "new boundaries were established." This treaty "solemnly guarantees to the Cherokee Nation all their lands not hereby ceded."

But the boomers of those days continued their encroachments without any cessation. Another treaty was made in 1794, and in 1801 the President sent a commission on an errand exactly like that of the present Senate Committee, "to obtain the consent of the Cherokees" to still newer boundaries. They refused consent, but the pressure on them continued, and in 1805 they made another cession of lands, in 1816 two more cessions, which took away all their possessions in South Carolina, and in 1817 still another; this time the Government solemnly covenanting to give to each head of a family east of the Mississippi 640 acres, "with a reversion in fee simple to their children." These Indians whom the Government was thus steadily robbing, were even then not savages. So long ago as when Oglethorpe made their acquaintance they had said: "We would not be made Christians as the Spaniards make Christians; we would be taught before we are baptized." They manufactured cotton cloth in 1800, and in 1820 they had schools, a national form of government, and farms under cultivation, and almost every family used the card and spinning-wheel.

But of what avail was a treaty with Indians when they occupied lands that white men coveted? In 1829 the beginning of the end was reached. In that year Georgia passed a so-called law annulling all laws and ordinances passed by the Cherokees, and providing that no Cherokee or Creek should be a competent witness in any court when a white man was a party to the suit. Then the State demanded that the Federal Government should extinguish all the Indian titles to lands within her boundaries. The history of the dispossession of the Cherokees has never been fully written, and it is to be hoped, for the sake of the white men, that it never will be. The bad men among them were bribed; their lands were put up at lottery by the whites; Cherokees were hanged by the verdict of white juries, and so greatly were they persecuted that, beautiful as was their country and strong as was their love of it, they yielded at last, and in 1835, after persistent opposition, they took the final step, and ceded to the Government all their lands east of the Mississippi. What they gave up is thus described in a report made to the War Department in 1825:

> "The plains furnish immense pasturage, and numberless herds of cattle are dispersed over them; horses are plenty; numerous flocks of sheep, goats, and swine cover the valleys and hills. The climate is delicious and healthy. In the plains and valleys the soil is generally rich, producing Indian corn, cotton, tobacco, wheat, oats, indigo, and sweet and Irish potatoes. Apple and peach orchards are quite common, and gardens are cultivated. There are many public roads and houses of entertainment kept by natives. Numerous and flourishing villages are seen in every section of the country. Cotton and woollen cloths are manufactured. Different branches in mechanics are pursued."

Is it any wonder that this people clung to their homes until an army was sent to drive them out? "The full moon of May is already on the wane," said Gen. Scott in his warning proclamation to them, "and before another shall have passed away every Cherokee, man, woman, and child, in those States (North Carolina, Georgia, Tennessee, and Alabama) must be in motion to join their brethren in the West." There was even haggling by Gen. Scott over the Indians' estimate of the cost of their journey; he thought that sixteen cents a day for rations was too high. We will not attempt to picture this journey of young and old half-way across the continent.

It is the last refuge of these Indians that Congress once more proposes to cut down. Some of this land they have already been coerced into parting with. Is it any wonder that they protest against giving up any more? These Indians, it must be remembered, are not the strolling bands found on the Sioux reservation, dependent on Government rations for food (now that their game is killed off), and still retaining their savage customs. They are a civilized nation, with a carefully devised form of government, living in neat houses (see a recent report of the Interior Department), owning sewing machines and pianos, raising their own wool and cotton, maintaining schools at a cost of some $75,000 a year, with stores, mills, and smith-shops, a printed constitution and laws, and a weekly newspaper.

It is a sad chapter in our history, this story of the Cherokees, and there does not seem to be vitality enough in public sentiment on the subject of Indian wrongs to give any assurance that new chapters will not have to be written, so long as white boomers covet the red man's land, and members of Congress see a way to strengthening themselves with their constituents by assisting in the theft.

ITALIAN EMIGRATION.

THE *Economista d'Italia* of April 17 gave what it called the "painful figures" of the emigration of Italians for the year 1888, as furnished by the Director-General of Statistics. The total is 195,211, as against 127,748 in 1887. This is exclusive of temporary emigration—the leaving the country for a few months, that is, in search of temporary work. The departures are mostly from the agricultural provinces of the South, though Venetia leads the list with 81,042 emigrants, compared with 26,239 in 1887. From some parts of the province there has been almost a complete exodus. About Treviso, for example, entire villages are depopulated, and large estates are left without a single laborer, recalling the worst days of Ireland's famine and emigration. And the *Economista* fears that it is but a question of months before Piedmont and Lombardy and Tuscany will follow the example of Venetia.

The Italian journal does not hesitate to ascribe this accelerated emigration in large part to the present fiscal policy of the nation. The system of protection and militarism hits the farmer hard both going and coming; all his supplies cost him more, and the market for his products is narrowed; at the same time his taxes are increased. It is an agricultural crisis under which Italy is struggling, and it is from great distress and hardships in the agricultural regions that the Italian farm laborer is fleeing. Such a forced emigration must have a very different effect upon the mother country, says the *Economista*, from that which comes from colonization or the voluntary leaving of their native land by men bent on business enterprises. Patriotic sentiment cannot long survive in those who remember their country chiefly as the scene of their misery. And the struggle with the productive power of foreign nations will not be any the easier for Italy after she has sent thousands of her sons to become a part of the efficiency of her competitors.

A decidedly brighter view of the matter, at least in one of its aspects, is taken by the London *Spectator*, in its issue of April 27. It discusses the question of Italian influence in the Argentine Republic, and predicts the ultimate if not speedy Italianization of that country. Of the total immigration into the Republic of the La Plata for the last thirty-three years, 65 per cent. is Italian. In 1885 the Italian Chamber of Commerce of Buenos Ayres estimated that there were in the country no less than 1,000,000 persons of Italian birth or parentage. As this would indicate, the Italian emigrants are highly prolific. They marry with the native Indians more frequently than other new-comers, and such unions have been very fruitful. Of a present estimated population of 3,500,000, it is very possible that Italian blood is to be found in nearly one-half. With these facts to go upon, the *Spectator* argues that a new and greater Italy may arise in South America, to restore the decaying glory of the Italian name.

This appears to us to be an optimistic if not actually absurd view to take. It overlooks too many of the elements of the situation. Mere numbers do not count for much in the countries of Spanish-America. If they did, then Mexico and Chili and Brazil would be known as nations of Indians. No governments better illustrate the inevitable way in which a superior race dominates over an inferior, and, though few in actual numbers, determines the character and destiny of the nation. The vast majority of Italian emigrants to the Argentine Republic are of the grade we see most of in this country, and have little more immediate effect upon the government than the Indians with whom they so readily affiliate.

Then as to the actual influence of the Italians in the Argentine Republic, it is of course a thing not to be settled by any one's opinion; but intelligent Argentines with whom we have talked rate it very low. And numbers of suggestive facts might be cited in opposition to the view of the *Spectator*. For example, there are published in Buenos Ayres nine Italian newspapers and periodicals, of all sorts; but there are 109 Spanish, the latter including all the scientific and technical journals and by far the most able of the financial and political papers. In this respect the Italians are but a little in advance of the English, Germans, and French, each of those nationalities being represented by four publications; in proportion to the national constituency the latter mean more than do the nine Italian. Take the question of banking influence. Against

the twenty Spanish-American banks can be set but two Italian, while there are three English, two French, and one each for the Germans and Spaniards. It may be added that not a single important officer of the Argentine Republic is an Italian. Certainly the *Spectator's* great Italian power of the Plate River has not yet arrived.

Moreover, there is likely to be a falling off in the Italian emigration to the Argentine Republic. The leaders of that country have already taken measures to discourage and check the coming of Italians who are mere unskilled laborers. At the same time, they are making strenuous efforts and liberal offers to induce emigration from the north of Europe—from Sweden and Norway, from Belgium and Holland. These attempts may not succeed, though we notice that in the month of March over 2,000 Belgians landed at Buenos Ayres; but they indicate that the Government has its eye on emigration, and that it will not hesitate to adopt stringent laws to keep out those whom it may not desire. It is certainly a mistake for the *Spectator* to speak of "Spanish indolence" giving the more wide-awake Italians a golden opportunity in the Argentine Republic. That country does not lie in the tropics. Its inhabitants have the vigor and energy appropriate to a temperate zone. Its ruling spirits are men of great ability. Buenos Ayres has literary and educational interests and organizations of great and growing importance. The *Spectator* will much sooner see home rule in Ireland than Italian rule in the country of the Argentines.

A REVISED WESTMINSTER.

It is easy to assign an undue importance to the action of the Presbyterian General Assembly looking towards a possible revision of the Westminster Confession. The way chosen of disposing of the question is entirely indeterminate—in fact, makes revision possible only after several years. This, of course, is in accordance with the traditional caution of the Presbyterian polity, which is always content to maintain the ancient landmarks until compelled by the general sentiment of the denomination to change them. Possessed of absolute power to settle the whole matter itself, the Assembly prefers to remit it to the presbyteries—that is, the pastors and churches—after the manner of an *ad-referendum* government. By these lower and more widespread courts the question must now be debated; and even if they decide upon change, it will take several years to engraft it upon Presbyterian organic law.

One should bear in mind the peculiar constitution of the Presbyterian judicatories as bearing on the decision of such questions. They are often compared to the gradations of the civil courts, rising from lower to higher, appeals lying from the presbytery to the synod, and thence to the Assembly as the Supreme Court. The analogy is fair enough, though it overlooks the fact that the same judges may be found in all three bodies, reviewing, for example, in synod or Assembly, decisions which they themselves have helped to make in presbytery. It is quite out of the question, then, to have a fresh and impartial review by higher judicatories of a case arising in the lower.

It is this interlacing of courts and functions that usually makes it so difficult and prolonged a matter to effect a change of any importance in the Presbyterian system; the revision of the Book of Discipline, for instance, was finally effected five years ago only after having been before the churches for years. And it is probable, as we have said, that the Assembly merely determined to set in motion this cumbrous machinery to find out, in the first place, if a revision of the creed is desired, and then, perhaps, a year or two later, to appeal to the same circumlocution office to ask how to get the thing done. It is for this reason that the action may be taken to be far more momentous than it really is. Indeed, it is possible for the extremest conservatives to interpret the whole thing as only a bold challenge to dissatisfaction and restlessness. This is what they are evidently going to do, as the Princeton men make perfectly clear with their curious talk about standing by the old Westminster even if the Assembly should abandon it. The conservative position in the presbyteries undoubtedly will be that the Assembly desired to show the world, in the most conclusive way possible, that there is no dissatisfaction in the Church with the old creed. Let us put an end, they will say, to all these vague reports, and let it clearly be understood that we want no changes. And it would not be at all strange if they should carry the day. The liberals, on the other hand, see in the action of the Assembly all they could have hoped. They confidently expect that what they believe to be the reproach of their church will be taken away. They predict a great increase in the number of candidates for the Presbyterian ministry, especially among those choicer young men educated in the Eastern colleges, of whom so few are seeking that ministry. Above all, they hope for the abolition of the present ambiguous terms of subscription, which expose tender consciences to so much of moral peril.

Meanwhile, to an outsider the action of the Assembly cannot but have the greatest significance, albeit of a kind probably different from that perceived by the strictly ecclesiastical eye. It means that the Presbyterian Church is at last conscious of the theological *glissade* upon which it, in common with all others, has entered. But a few years ago the Confession of Faith was the very ark of the covenant, to touch which was impious. In the debates on the revision of the Presbyterian Discipline, only a half-dozen years since, it was a common argument of the opponents of change that the next thing to be heard of would be a revision of the Westminster. God forbid! was the general cry. But already it is at least propounded, it is at least acknowledged to be an open question whether, as was hinted by that child of the Covenant, brought up on the Westminster, Carlyle, "there may be elements in the infinite thought and scheme which the Westminster Assembly has not jotted down."

It cannot but be in the interest of light to have these old questions gone over, as they will be, in the Presbyterian churches of the land. A certain melancholy, however, comes with reflecting how vast an amount of energy will be expended on matters which are really so little connected with the most vital thought of the age. The conservatives are wholly right in one point—it will be perfectly futile, as they say, to hope to satisfy the objectors to the Westminster with any such slight repairs as may be effected. As long as the accredited instructors of Presbyterian seminaries go on dismissing, with ignorant scorn, the contributions to human knowledge made in this century which have revolutionized every department of investigation, as long as nine-tenths of the Presbyterian ministry have never even read the works of the man whose name will do most to make the nineteenth century distinguished to those who come after us, it is not reasonable to expect that even a revised Presbyterian creed will be able to satisfy those who have eaten of the new tree of knowledge. Horace Bushnell used to say that ministers in general preached about what their fathers, a hundred years before, had supposed, though mistakenly, that people were interested in; the subjects, even then, being a century belated. So a revised Presbyterian creed might possibly get onward from 1649 to 1749; there is no chance of its getting in sight of 1889.

AMERICAN ORIENTAL SOCIETY'S PROCEEDINGS.

Boston, May 22, 1889.

The annual meeting of the American Oriental Society took place in the Athenæum Building to-day, the Rev. Dr. Peabody in the chair. Dr. Isaac Hall of the New York Metropolitan Museum made a report for the Committee on Classification of Oriental Manuscripts. Dr. Gottheil and Dr. Hall have thus far examined more than four hundred. Among these are a great number of synagogue rolls; Samaritan, Syriac, Arabic, Turkish, Ethiopic, and Persian parchments, several Armenian, and a few rarer Chinese, Siamese, Burmese, and Assamese. It is hoped that the efforts of this committee will be an incentive to other scholars all over the country towards classifying and cataloguing all Oriental manuscripts which may come under their notice. The need of a systematically arranged catalogue of such curiosities has long been felt by scholars.

Prof. Moore of Andover read a paper on certain Arabic MSS. in the library of the University of the City of New York. These are chiefly grammatical works collected in Syria by Mr. Jonas King in 1823. The collection was bought by Mr. Chester of New York, and presented by him to the University. Prof. Moore touched upon three of the most important, viz., (1) a Commentary of Shihab Ed-dîn, the date of which is estimated at 894 A. D. (2.) A fine copy of a Commentary on the 'Alfiye,' the largest MS. in the collection, the approximate date of which is 1135-1177 A. D. Prof. Moore in his paper proved that its authorship must be attributed to Ashmûni. (3.) A Hebrew MS. of 180 leaves, now in Andover. This came originally from the Malabar coast, and was presented by Mr. Bardwell to the Andover Library. Nordheimer describes it as a book of hymns and songs—chiefly for weddings, bridal

processions, etc. Most of the poets mentioned in this work are generally unknown.

Dr. Isaac Hall read an essay concerning a Syriac dissertation on Apostolic writings.

An article by C. Johnson of Johns Hopkins University, on "Chaldean Astronomy and Astrology," was read by Dr. Cyrus Adler. The writer states that it was the general opinion of antiquity that the Chaldeans were the originators of astronomy. He endeavors to prove this, contrary to Mr. Sayce's statement in favor of the Egyptians. He believes that the origin of astronomy and astrology was pre-Semitic, dating back to the Shamanism of the proto-Babylonians. The belief that the celestial bodies were the dwelling-places of the gods gave rise to the idea of observing the stars in order to know the will of the divine beings. This brought about their complicated system of astrology, and from this again came the knowledge of the heavenly bodies which resulted in our modern science of astronomy. In a work of seventy-two tablets on astronomy, supposed to be compiled in the reign of Sargon, 3000 B. C., is a digest of all the events expected to follow every combination of the stars. The author then explains the Calendar, deciding in favor of the theory that the standard was lunar rather than solar. He touches on the origin of the week of seven days, which he derives from the phases of the moon.

Dr. Cyrus Adler read also an article on the Progress of Oriental Science in America in 1888—a bibliography of Oriental studies in this country, comprising an author and subject-catalogue.

The Rev. Mr. Dickerman read a résumé of a work by William Petrie, giving an account of a systematic exploration around Hawara in Egypt. Mr. Petrie refutes the doctrine of Maspero and Sayce that Lake Moeris, mentioned by Herodotus, never existed. The area of the lake, he says, was considerably reduced by the draining operations of various monarchs, more especially the Ptolemies, and therefore does not exist at the present day. He furthermore describes the labyrinth and pyramid of Hawara, which were destroyed by quarrying for the material that composed them (limestone and granite). Mr. Petrie has, however, discovered its exact situation. Among his researches he also discovered the sarcophagus of Amen-em-hat III. and that of his daughter Tanefer-u. On the south side were the boxes which held the funeral vases. Besides these he found an alabaster table for offerings and a set of alabaster bowls. One of the most curious finds was a false or dummy mummy of an infant, whose body the embalmers had not taken the trouble to prepare.

Mr. J. D. Prince gave a brief account of the proceedings during the past year of the Babylonian Expedition sent out from the University of Pennsylvania. This was supplemented by a few remarks from Dr. William Hayes Ward concerning the movements of the party since the departure of Mr. Prince in February.

During the afternoon session Dr. F. C. H. Wendell read "Prolegomena to an Historical Account of the Egyptian Religion." In debating the character of the generally accepted creed, the author raises the question whether the religion was monotheistic. In one sect there was, he says, a strong tendency to monolateralism, or blending various deities into one. This ultimately resulted in what might be called a monotheism. The term pantheism, however, is not more appropriate. The Egyptian religion was in reality an animism, or more exactly an agglutinated polytheism. Egypt itself is an agglomerated product. Every province or country had its official deity, all duly recognized by the national or union religion as supreme in their local sway. Lower and Upper Egypt had later two distinct general cults, besides the local ones.

Prof. Lyon read a paper describing a lapis-lazuli disk, bearing a cuneiform inscription of eight lines.

Dr. Wm. Hayes Ward read an article on Babylonian cylinders. Seal cylinders, he says, had their origin in Southern Babylonia, and were adopted later by Persia and the adjacent countries. The cylinders finally gave place to conical and ring-shaped seals. Their form was taken from the joint of a reed. The later seals were simple cylinders of uniform diameter. The earlier ones were of hard serpentine. Seals were not turned on a wheel, but were formed by rubbing them up and down in a groove supplied with emery powder. All seal cylinders are bored first from one end and then from the other. No genuine cylinder is perforated from one end only. The later ones have smaller holes than the ancient ones. The old Babylonian cylinders are among the largest and thickest. In sealing, the entire cylinder was seldom rolled over upon the tablet, but only one side. In later Babylonian times the cylinder came to have a value as a talisman, owing probably to the religious devices engraved upon it. The most ancient of all represent the wild buffalo rather than the wild bull, probably because the buffalo was domesticated at a very early period.

The other papers were, "Traces of Christian Ideas in the Myths and Customs of the Civilized Races of America," by the Rev. S. D. Peet; "The Inscriptions at Lystra in Honor of the Emperor Augustus," by F. D. Brewer; "Inscriptions from Yorpin," supposed to be the site of the ancient Aralissus, copied from slabs in the Armenian Church by the Rev. Dr. George H. White in 1863, by F. D. Brewer; "Ethiopic Psalter," by Dr. Jastrow; "Avesta Grammatical Jottings," by A. V. W. Jackson. The meeting then adjourned until October.

A FEW ANCIENT SITES.—II.

NIFFER MOUNDS, TURKEY, March 16.

IN striking contrast with the massive ruins of stone described in my former letter is Jabriyeh, a day's journey beyond Kan Kalessi, a city of mud brick, in the plain, on the very bank of the Euphrates. This place is incorrectly given by Kiepert, in his large map of the Ottoman Empire, as on the north bank of the Euphrates. It is on the south bank, about 34° 20′ north latitude, and 41° 12′ east longitude, at the mouth of Wadi Jaber, at about the position assigned to El Karabile. (I may add that I was unable to find El Karabile at all; and El Kadim, the next station, given by Kiepert, should be El Kaim, and its position almost that he assigns to El Karabile.) This is not an unfair specimen of the inaccuracy of the best maps of Turkey. Anything like a survey is strictly forbidden, although, by a strange anomaly, the law of excavations requires a topographical plan as a preliminary condition of an application to excavate. At the eastern end of the southern wall of Jabriyeh the unburnt bricks are visible *in situ*, but the rest of the wall is merely a long narrow line of débris some 1,200 paces in length. The western wall, at right angles with this, and about 900 paces long, ends in a large mound or series of mounds, on the edge of what was once the river bed. The eastern wall also started in the same rectangular manner, but, after a couple of hundred paces, meeting the river bed, turned gradually about until it finally ended in the same large mounds in the northwest. Within this southern wall are two other lines of mounds, also bearing a perplexing resemblance to walls. The interior space and the surfaces of the mounds are thickly strewn with fragments of glazed and unglazed pottery of a greenish color, and pieces of burnt brick, many of which were also green, blocks of gypsum and basalt, and what I may call intentional pebbles (or those which were used for some purpose) of all sorts, including jasper and agate, both of which abound in this region. On the surface of the large mounds were graves, and some late constructions of brick and stone. It is said in the neighborhood that coins, presumably Sassanian or Kufic, are often found here.

Jabriyeh was visited by Dr. Ward on his return journey in the spring of 1885, and pronounced by him an ancient Babylonian ruin, on the ground of its mud-brick walls. It is only two days' journey above Anah, at which point Babylonia, with its climate, its customs, and its people, may be said to commence, and Syria end. It is by no means impossible that Dr. Ward is correct in his conclusions, and I was at first inclined to accept them without question; but later experience with mud-brick walls and similar remains in Babylonia proper have shaken my belief, and even induced me to think that, although Babylonian in the sense of reflecting the building customs of that region, it belongs in time to a much later period than that implied by the word—namely, to the Sassanian, or even to the Arabic period.

Another place visited by the Wolfe Expedition was Anbar, which Dr. Ward identified with "the Agade, or Sippara of Anunit, the Accad of Genesis x, 10, the Persabora of classical geographers, and the Anbar of Arabic historians." This place is given by Kiepert, in his *Ruinenfelder*, under the name Tel Aker, a name which applies in reality only to the highest southeastern point of the mounds. These mounds are of great extent, covering more ground than those of Babylon itself, and equalling if not exceeding in surface the immense mounds of Niffer. Anbar lies on the east bank of the Euphrates, just south of the point of junction of the Saklawiyeh Canal, about latitude 33° 20′ north, and east longitude 44° 3′. It is near the late ruin and small modern village of Kala'at Feluja, at which point a bridge of boats was built across the Euphrates some three years since, thus deflecting the caravan route from its former course via Saklawiyeh. Dr. Ward discovered the place by accident, as the result of his visit to Sufeira, to the north of the canal. He had but an hour or so at his disposal in which to examine it. We were more fortunate in being able to devote a day to the examination, but even that proved totally inadequate for the purpose, so large were the ruins. We had a peculiar interest in this examination because, in consequence of the report of the Wolfe Expedition, we had applied for permission to excavate at Anbar—an application which was refused for reasons unknown. We all failed to notice the depression dividing the city "into two parts," of which Dr. Ward writes, and which figured also in his proposed identification. Dr. Ward thought that he could "trace the lines of the old palaces or temples" in the depressions and hollows of the mound, which are indeed remarkable; but our experience at Niffer has shown us that surface indications of this sort are of small value, especially where a site was inhabited to a comparatively late period. The remains on the surface are all late, and belong to the time of Arabic occupation.

There are everywhere visible singular evidences of what seems to have been a great con-

flagration, in the shape of vitrified masses of brick and glass, and stones destroyed by heat. Fragments of glass were especially numerous, and one mound was veritably an iridescent green from the quantity upon it. The pottery was the same as that found upon the surface everywhere along the Euphrates and in Babylonia, the glazed fragments having a bluish or greenish color. The size of the mounds points to a long period of accumulation, and consequently to a considerable antiquity. This process of accumulation of mud-brick mounds can be readily observed on a small scale in any town or village of unburned brick or mud, like Deir or Anah or Hit, on the Euphrates, all of which (and especially the latter two) are ancient. A man's house is washed away by the rains, and turned gradually into a heap of mud, on which in time a new house will be erected, to undergo in its turn the same fate. The rapidity of growth, which would otherwise be enormous, is, of course, checked by the use of some of this old material over and over again.

The sites which I have mentioned are but a very few of the immense number which we have observed, beginning almost with the day on which we set foot in Asia. So, for example, from Hammam, ancient hot springs on the eastern edge of the great Antioch plain, near the point where Zenobia met with her first defeat at the hands of the Romans, I counted eighteen ruin mounds, not identified, to the best of my knowledge, nor noted on any map. The plain to the east of Aleppo is fairly dotted with similar *tels* yet awaiting investigation. Here, also, at two small villages, we found remains of stone structures, colonnades of marble and basalt, great basalt troughs, and in one place an ornamental door of basalt, with keyhole and bolt-holder complete. The ruins along the Euphrates, especially below Anah, are not so numerous. They are chiefly Arabic fortresses, some of them, like Rehaba, a day below Deir, comparatively well preserved and very picturesque. These probably stood on older foundations, for the most part unidentified. Opposite the mouth of the Khabour is a large plain on which are a number of mounds, and the whole plain is literally covered with pottery. The present condition of the Euphrates valley, especially above Deir, is one of almost hopeless desolation. The land is wonderfully fertile, with water easy to obtain, but the inhabitants are only a few handfuls of squalid Arabs of the most degraded type, and any cultivation is a sort of accident.

Between the Euphrates and the Tigris our matter of amazement was not so much the number of ruins, although these are not wanting, as the vast number of canal beds of all ages, apparently, excepting the present. A large number of these radiate from Akerkuf. The latter ruin consists of a few low mounds, on one of which is a solid mass of sun-dried bricks, rising like a tower to the height of about one hundred feet. Well known, only six or eight miles from Bagdad, a conspicuous landmark, visited by every one, Akerkuf has never been touched by the spade, and no one has any idea what ancient city lies buried here. An inscribed brick, found a number of years since, bears the name of Kurigalzu, showing that the place, whatever it was, existed at least 1,600 years B. C. This, and the fact that it was the centre of a great canal system, constitute the sum of our knowledge of Akerkuf.

Singularly enough, our first guide to Akerkuf misled us to an almost unknown and quite interesting Arabic ruin, called Senadiyeh. Here, amid pottery, bricks, and fragments of walls, we found standing part of a highly decorated building, which appeared to belong to the period when Bagdad flourished under the caliphs; but all about it were mounds and canals, many of them going back probably to the Babylonian period. The way in which one age here borrows from its predecessors was illustrated by the finding of beautiful blue tiles from Senadiyeh built into *ziarets*, and also into a Government building several miles away. Similarly, at Hillah we found the Government building made, at least in part, of stamped bricks of Nebuchadnezzar from Babylon.

At Bagdad M. Henri Pognon, the well-known Assyriologist, acting French Consul in M. de Sarzec's absence, took us to visit the ruins of ancient Bagdadu. The visible remains consist of a great terrace of brick on the western or Mesopotamian bank of the river, within the limits of the modern city. The bricks are laid in bitumen, and bear the stamp of Nebuchadnezzar. We had to reach them by boat, a large, round, wicker basket, smeared with bitumen, such as are depicted in the Assyrian bas-reliefs. On top of the remains of this ancient terrace or levee had been built at a later date another of inferior material and workmanship, and without bitumen—proof that Bagdad existed before 742 A. D., and that the caliphs merely rebuilt an ancient city.

It may not be amiss to add a few words about Niffer, where we are at present excavating, or Nufar, as the natives call it. It lies about in 32° 8′ north latitude, and 44° 10′ east longitude, in the country of the Affek, or Affej, Arabs, a powerful confederation, almost independent of Turkish rule. Kiepert locates it on a great marsh, but this has been somewhat reduced in size within the last five years by the partial change of course of the Euphrates. The water which once flowed in the river bed now pours into the Hindiyeh canal, leaving the river more than half empty, and almost ruining the country on both sides of it from Hillah southward, which was dependent on the water of the river for irrigation. The Government has finally been forced to take steps to prevent a total change of bed, by erecting a new dam to check the flow of water into the Hindiyeh. The mounds of Niffer are of immense extent, covering more ground than the ruins of Babylon. They are divided into two, or rather three, parts, by what Arab tradition declares to be the Shatt-en-Nil, the same great canal which one finds leaving the Euphrates at Babylon. How late the city was inhabited we cannot yet say, but probably until considerably after the commencement of the Christian era. It was certainly still flourishing in the times of the Persian kings, and under the name of Nipur it is known to Assyriologists as one of the oldest, most important, and most sacred cities of southern Babylonia. In the Talmud it is identified with the Calneh of Gen. x.

Our excavations were commenced early in February, and we hope to extend the season until the first of May. The weather is already intensely hot, reaching at times 102°, or even 105°, in our tents, in spite of high winds; and the flies and dust are almost intolerable. Nevertheless, we were delayed so long in Constantinople, and commenced work so late, that necessity compels us to hold on to the latest possible date, if we would have anything to show for this year's work, or even prepare the way properly for next season. JOHN P. PETERS.

THE EXPOSITION.

PARIS, May 16, 1889.

IT is impossible to speak or even think of anything at present but of our great Exhibition. I saw the Eiffel Tower grow slowly for years, and I must say that I did not look with pleasure on it. As long as it was unfinished, however, I had the consolation of thinking that it was a mere temporary structure, and that perhaps it would have the fate of the tower of Babel and remain incomplete: "pendent opera interrupta." I was wrong, and when, some time ago, the workmen, as is their habit with every new house in Paris, planted the tricolor flag on its top, I felt that the time had arrived, and that I must resign myself to make a visit to the iron monster. For many months, also, as I took my passage in one of our fast little steamers on the Seine, as I often do (and there is no more agreeable mode of locomotion in our city), I saw a sort of curious town rising on the left bank of the Seine, between the huge building of the Foreign Office and the Champ de Mars. I admired the skill of our Parisian workmen, who seem to do anything they like with a little wood and plaster, who understand all styles, who can build a sham mosque, with its minarets, as well as a Greek temple. From the river I saw a curious agglomeration of bazaars, of quaint edifices, of spires, of cycloramas, of arches; it seemed all unreal, and looked like the decoration of a theatre.

The great day came, and the Exhibition was opened by M. Carnot, our President. The day before, he had gone to Versailles to celebrate the anniversary of the opening of the States-General of 1789. Not unintentionally the two ceremonies were made to coincide—the Revolution, the Exhibition were to be like twin sisters. The Republic of 1889 wished to place on her credit account the marvels of French industry, the sum of all the progress accomplished in science since a hundred years. I was not among those who witnessed the festivities at Versailles and the day afterwards at the official inauguration of the Exhibition, which took place under the central dome of the buildings in the Champ de Mars. In the evening of that day Paris was illuminated, and for the first time the Eiffel Tower took on the appearance of a gigantic lighthouse. From a balcony on a house situated on the Boulevard Haussmann, I saw this extraordinary illumination. Every cupola in Paris, every church was marked with lines of fire—the Panthéon, the Invalides, the Opéra, the huge towers of the Trocadéro. The three platforms of the Eiffel Tower were marked against the sky, and from its top a light threw its rays, sometimes red, sometimes white or blue. From time to time, red Bengal fires illuminated the whole iron structure of the Tower, and then its colossal dimensions appeared to advantage, as it rose above the city. Electric light was projected in varying directions from gigantic lamps which were near the top of the Tower, and fantastic cones, like tails of comets, played over the horizon. The whole scene had something demoniac, and made one think of the end of the world. It recalled to me at times the fires of the Commune: there was the "grande ville" swelling in its pride, and building new palaces before it had reconstructed those which it had destroyed with its own hands in 1871.

The next day I drove to the Trocadéro and entered the Exhibition by the right bank of the river. The view of the Champ de Mars, when you look down from the Trocadéro hill, is truly stupendous. The wildest fancy could not throw together more things in the same space: blue cupolas, gilt cupolas, iron and glass roofs in endless succession, the bridge over the river, gilded boats gliding on like the Venetian Bucentaur, immense gardens, grown as if by magic on the bare ground of the Champ de Mars;

pavilions hidden on the right and on the left, of all sizes, of all styles, of all colors; flags of all creation, and, in the midst of this confusion, the great mass of the Eiffel Tower rising to the sky, with its clean-cut network of iron, so transparent that at times it seems unreal, so hard that at other times it seems oppressive and threatening, an object without any other grace than the curve of its immense parabolic line, a geometrical grace; a thing of endless details where no detail particularly strikes you, where you can measure nothing in your mind by comparison, as you do before a Gothic cathedral, where statues and familiar ornaments are spread everywhere. I certainly had not, in the presence of this tower, 300 metres high, an impression of greatness equal to what I have experienced before the cathedrals of Strassburg and Cologne. I felt more bewildered than moved, and the bewilderment grew when, crossing the river over the bridge which has been enlarged and decorated for the occasion, I arrived at the very feet of the huge monster—four iron feet, immense, looking like the paws of a fantastic animal. When you enter the great square which is formed by them and go to its very centre, you see the inside of the Tower, and your eye can go nearly all along its axis of 300 metres, as the platform is but a large gallery and is open in the middle.

Leaving the Tower behind me, I went across the immense gardens, looking right and left on the long buildings called the Gallery of Fine Arts and the Gallery of the Liberal Arts. I admired the dome which marks the centre of each of these long galleries. I do not think that the ornamentation of metallic structures has ever been carried so far or has ever been so happy. Everywhere the great lines of the metallic structures are visible and clear, but the intermediate spaces have been adorned with terracotta, with porcelain, with enamelled bricks; the iron frames have been painted in light colors, and the general impression is very agreeable. The two domes are particularly fine: they are of a sort of turquoise blue, mixed with white, which gives them a very aerial appearance.

I do not like so much the central dome, placed in the transverse middle gallery, facing the Eiffel Tower. It has been covered with gold, and looks too gaudy and gorgeous, and bears an immense gilt statue of France, distributing laurels and crowns, which is entirely devoid of grace and beauty. Entering the galleries which extend behind this dome, I rushed, in a straight line, to the magnificent Machinery Hall, which is, with the Eiffel Tower, the characteristic feature of the Exhibition. It is the largest iron hall that has ever been built (much larger than the St. Pancras station in London). I will not here give its dimensions. I will only say that the impression which it makes is truly great. The means are suited to the end, which is the first rule of æsthetic beauty. The simplicity, the boldness of the great iron frames which, at equal distances, form the skeleton of this huge building, cannot be too much praised; and the light colors which have everywhere been employed give airiness to the gigantic hall. Light comes into it like a flood. It would be a pity ever to demolish such a magnificent structure. When the machinery is removed, it will look even more imposing. Perhaps it will be used as a drilling and parade ground: a whole regiment of cavalry could easily manœuvre in it. It is a pity that it is built right in front of the old École Militaire, which is one of the good buildings of the capital. It may be that the iron hall will be removed in parts to some other place, for the École Militaire, with its immense Champ de Mars, is an historical place and cannot be suppressed.

While I was wandering among the machinery, I saw a great crowd before Edison's exhibition. I approached and saw the famous phonograph—a little box, not bigger than a small musical box. A polite gentleman offered the ends of two India-rubber tubes to place in my ears. I did so, and immediately the noise of the engines of the great hall ceased to be perceptible, and I heard instead a march played by a brass band, as clearly as if it had been behind my back. "This march," said the gentleman to me, "was played four months ago in New York." The phonograph is one of the great successes of the exhibition. Everybody is amazed by it—those who do not understand it, and, I may add, also by those who do understand it. It is simply miraculous.

I returned towards the river, feeling everywhere as if the great Tower were over me, and when I approached it again I entered into a sort of a bower, and took refuge among some trees, when a little page ran after me. "Sir, he is going to begin." Who is going to begin? "Don't you know?" No. "Paulus." I allowed the page to take me into a sort of café concert. He had not deceived me; the curtain lifted, and on the stage I saw Paulus, the famous Paulus, the man who made half the popularity of General Boulanger, by singing "En revenant de la Revue," "Les Pioupious d'Auvergne," "C'est Boulange, lange, lange, c'est Boulange qu'il nous faut." There was the great Paulus, and there he is now every day, before an enthusiastic audience. He sings no more Boulangist songs—his General is in exile. He sang a song which ended with "Ils y viendront"—"they will come"—meaning the Emperors, Kings, and Princes who, so far, have refused to come; and he described the glories of the Exhibition. Undoubtedly Paulus thinks himself one of these glories. By a curious contrast, his little theatre (an incombustible steel theatre) lies almost at the feet of the big Tower. A foreigner may see here the extremes of civilization, and if anybody should feel intoxicated by the glories of modern science, I advise him to enter Paulus's theatre, to hear his vulgar and indecent songs, his coarse pleasantries; to look upon the admiring crowd which lies at his feet. There is a curious irony in the juxtaposition of the gigantic Tower and the tiny theatre, of Eiffel and of Paulus.

SMOLLETT IN SEARCH OF HEALTH.—II.

NICE, January 21, 1889.

IT was chiefly owing to his remarks on Art that Smollett excited the ire of contemporary English connoisseurs. He does really say, as Sterne accused him of doing, that "the Pantheon looks like a huge cock-pit open at the top"; but he discusses the building at length in a way which shows that he knew what he was about. He also finds fault with the Venus de Médicis, which at that time was greatly overpraised. But, far as he was from the opinion of his own time, he approaches very nearly the judgment of art critics of our day. It is not, however, an instance of this when, in speaking of the frescoes in the Campo Santo of Pisa, he says: "Though the manner is dry, the drawing incorrect, the design generally lame, and the coloring unnatural, yet there is merit in the expression; and the whole remains as a curious monument of the efforts made by this noble art immediately after her revival." He has, too, the strange idea that the celebrated fresco of the Triumph of Death represents the three stages of putrefaction which bodies undergo in nine days when buried in the Campo Santo. We are ordinarily told that this was filled with earth brought from the Holy Land; but Smollett imagines it "no other than common earth mixed with quicklime." All this shows how dangerous it is to be dogmatic in art criticism, when standards of taste are constantly changing. The opinions of many art critics of the last century seem strange in our eyes, while some which looked strange then seem natural enough now. Smollett at all events had the merit of being frank, and of expressing his real opinions, not judgments made up from books.

Among many miscellaneous remarks interspersed in the account of his journey, here is one about the Acton family, well known both in England and Italy:

"He that now commands the Emperor's navy, consisting of a few frigates, is an Englishman called Acton, who was heretofore captain of a ship in our East India Company's service. He has lately embraced the Catholic religion, and been created Admiral of Tuscany."

And here is an amusing remark, which shows an early acquaintance with the works of his contemporary Goldoni:

"For my part, I would rather be condemned for life to the galleys than exercise the office of a cicisbeo, exposed to the intolerable caprices and dangerous resentment of an Italian virago. I pretend not to judge of the national character from my own observation; but if the portraits drawn by Goldoni in his comedies are taken from nature, I would not hesitate to pronounce the Italian women the most haughty, insolent, capricious, and revengeful females on the face of the earth. Indeed, their resentments are so cruelly implacable, and contain such a mixture of perfidy, that, in my opinion, they are very unfit subjects for comedy, whose province it is rather to ridicule folly than to stigmatize such atrocious vice."

Although Smollett's opinions of Italian ladies are particularly British, his criticisms on his own countrymen are no less severe:

"The English are, more than any other foreigners, exposed to this imposition. They are supposed to have more money to throw away; and therefore a greater number of snares are laid for them. This opinion of their superior wealth they take a pride in confirming by launching out in all manner of unnecessary expense; but, what is still more dangerous, the moment they set foot in Italy they are seized with the ambition of becoming connoisseurs in painting, music, statuary, and architecture, and the adventurers of this country do not fail to flatter this weakness for their own advantage. I have seen in different parts of Italy a number of raw boys, whom Britain seemed to have poured forth on purpose to bring her national character into contempt: ignorant, petulant, rash and profligate; without any knowledge or experience of their own, without any director to improve their understanding or superintend their conduct. One engages in play with an infamous gamester, and is stripped perhaps in the very first partie; another is pillaged by an antiquated cantatrice; a third is bubbled by a knavish antiquarian; and a fourth is laid under contribution by a dealer in pictures. Some turn fiddlers and pretend to compose; but all of them talk familiarly of the arts, and return finished connoisseurs and coxcombs to their own country. The most remarkable phenomenon of this kind which I have seen is a boy of seventy-two, now actually travelling through Italy, for improvement, under the auspices of another boy of twenty-two. When you arrive at Rome you receive cards from all your country-folks in that city; they expect to have the visit returned next day, when they give orders not to be at home, and you never speak to one another in the sequel. This is a refinement in hospitality and politeness which the English have invented by the strength of their own genius without any assistance from France, Italy, or Lapland. No Englishman above the degree of a painter or cicerone frequents any coffee-house at Rome; and as there are no public diversions except at Carnival-time, the only chance you have of seeing your

compatriots is either in visiting the curiosities or at a conversazione. The Italians are very scrupulous in admitting foreigners, except those who are introduced as people of quality; but if there happens to be any English lady of fashion at Rome, she generally keeps an assembly to which the British subjects resort."

This is very true of the last century, as witness all the letters and diaries of travellers, and is partly true of Rome nowadays, though a change is noticeable since that city has become the capital of Italy.

The greatest interest, after all, in these travels is in the account of Nice; and Smollett gives his observations on the weather from November, 1763, to the end of April, 1765, generally day by day, with the record of two thermometers, the direction of the wind, and weather fair, cloudy, or "mizzling rain." His second winter in Nice, 1765, was a remarkably damp one, and rainy weather prevailed from the middle of November to the 15th of March. In four months there were fifty-six days of rain.

"Notwithstanding these great rains, such as were never known before at Nice in the memory of man, the intermediate days of fair weather were delightful, and the ground seemed perfectly dry. The air itself was perfectly free from moisture. Though I lived upon a ground floor, surrounded on three sides by a garden, I could not perceive the least damp, either on the floors or the furniture; neither was I much incommoded by the asthma which used always to harass me most in wet weather. In a word, I passed the winter here much more comfortably than I expected. . . . In the spring, in spite of the constant sunshine, the air is cold, and the east wind sweeping over the Alps and Apennines, covered with snow, continues surprisingly sharp and penetrating. Even the people of the country, who enjoy good health, are afraid of exposing themselves to the air at this season, the intemperature of which may last till the middle of May, when all the snow on the mountains will probably be melted. Then the air will become mild and balmy, till, in the progress of the summer, it grows disagreeably hot, and the strong evaporation from the sea makes it so saline as to be unhealthy for those who have a scorbutical habit. When the sea breeze is high, this evaporation is so great as to cover the surface of the body with a kind of volatile brine, as I plainly perceived last summer. I am more and more convinced that this climate is unfavorable to the scurvy. Were I obliged to pass my life in it, I would endeavor to find a country retreat among the mountains, at some distance from the sea, where I might enjoy a cool air, free from this impregnation, unmolested by those flies, gnats, and other vermin which render the lower parts almost uninhabitable. . . . An agreeable summer retreat may be found on the other side of the Var, at or near the town of Grasse, which is pleasantly situated on the ascent of a hill in Provence, about seven English miles from Nice. This place is famous for its pomatum, gloves, wash-balls, perfumes, and toilette-boxes lined with bergamot. I am told it affords good lodging and is well supplied with provisions."

Smollett, who had lived in the West Indies, and his wife, who was a native of Jamaica, appreciated vegetables more than most Englishmen. One might think that they occasionally had certain articles sent out from America; for in 'Humphrey Clinker,' in a passage which really describes his own house, he speaks of a man so ignorant of grain "that our entertainer, in the face of the whole company, made him own that a plate of *hominy* was the best rice pudding he had ever eat." One can hardly think that hominy was then a common food in England. In his 'Travels' he catalogues with pleasure the peas, asparagus, artichokes, cauliflowers, and more common vegetables; mushrooms, champignons, and truffles, and even the white truffles of Piedmont, "counted the most delicious in the world."

"There is also a kind of small courge, or gourd, of which the people of the country make a very savory ragout, with the help of cheese, eggs, and fresh anchovies. Another is made of the *badenjean*, which the Spaniards call *berengina*. It is much eaten in Spain and the Levant, as well as by the Moors in Barbary. It is about the size and shape of a hen's egg, enclosed in a cup like an acorn; when ripe, of a faint purple color. It grows on a stalk about a foot high, with long spines or prickles. The people have very different ways of slicing and dressing it, by broiling, boiling, and stewing, with other ingredients, but it is at best an insipid dish."

This is of course the *aubergine*, or egg-plant. Smollett seemed very fond of maize, for he mentions it several times, and once says: "This country produces a good deal of Meliga or Turkish wheat, which is what we call Indian corn: the meal of this grain goes by the name of *polenta*, and makes excellent hasty pudding, being very nourishing and counted an admirable pectoral."

The remarks about fruit and fish, birds and insects, many of which are interesting, show Smollett's powers of observation and his love of natural history. He even speaks of "a mosquito net," showing that these virulent pests have not been recently introduced into Europe by American travellers on the ocean steamers.

Mention of *terrapin* shows that Smollett understood the word in its true meaning:

"You know all sea-birds are allowed by the Church of Rome to be eaten on meagre-days as a kind of fish, and the monks especially do not fail to make use of this permission. Sea-turtle or tortoises are often found at sea by the mariners in these latitudes, but they are not the green sort so much in request among the aldermen of London. All the Mediterranean turtle are of the kind called loggerhead, which in the West Indies are eaten by none but hungry seamen, negroes, and the lowest class of people. One of these, weighing about two hundred pounds, was lately brought on shore by the fishermen of Nice, who found it floating asleep on the surface of the sea. The whole town was alarmed at sight of such a monster, the nature of which they could not comprehend. However, the monks, called *Minims*, of S. Francisco di Paolo, guided by a sure instinct, marked it as their prey, and surrounded it accordingly. The friars of other convents, not quite so hungry, crowding down to the beach, declared it should not be eaten, dropping some hints about the possibility of its being something preternatural and diabolical, and even proposed exorcisms and aspersions of holy water. The populace were divided according to their attachment to this or that convent, a mighty clamor arose, and the police—in order to remove the cause of their contention—ordered the tortoise to be recommitted to the waves; a sentence which the Franciscans saw executed, not without sighs and lamentations. The land-turtle or *terrapin* is much better known at Nice as being a native of this county; yet the best are brought from the Island of Sardinia. The soup or bouillon of this animal is always prescribed here as a great restorative to consumptive patients."

But, as there must be an end to all things, Smollett was obliged to return to England—with improved health, it is true, but with the conviction that he should never be better. During his three years' stay in his own country he lived for a while at Bath, which he had always liked, and paid his last visit to Scotland. Meanwhile he published his 'Travels,' wrote the continuation of his 'History' down to 1762, and, just before going to the south, his 'Adventures of an Atom,' in which he vented the last remains of filth, spite, and brutality that was still in his breast. He tried to get a position as consul, but in vain; Nice and Leghorn were already filled; and, finally, obliged to rely entirely upon himself, he left England in 1768 for Lucca and Pisa, where he remained for the winter, while he stayed for the summer in the village of Monte Nero, near Leghorn—fifty years afterwards inhabited by Byron. At Pisa he was visited by Sir Horace Mann, who did what he could for him; and among other work he wrote his charming novel of 'Humphrey Clinker,' in which he has evidently figured himself under the character of Matthew Bramble, whom Hannay calls "the most credible specimen of the *bourru bienfaisant* in literature." The charm of the book lies in its sweetness, which is the ripe product of Southern influence combined with ill health. Just before his death, in the autumn of 1771, Smollett wrote to his friend, the famous John Hunter: "With respect to myself I have nothing to say but that, if I can prevail upon my wife to execute my last will, you shall receive my poor carcase in a box after I am dead to be placed among your rarities. I am already so dry and emaciated that I may pass for an Egyptian mummy without any other preparation than some pitch and painted linen."

During the early part of January in that year there had been severe shocks of earthquake at Leghorn, which, as Sir Horace Mann writes in a letter from Pisa, dated January 14, 1771,

"have so terrified the inhabitants that few remain in the town. Thousands have gone into the country, many on board the ships in the mole; others sleep in boats on the canals, and many in their coaches upon the place. The most essential damage will probably arise from the hurt people will receive in their healths, for the buildings have suffered very little as yet; but as formerly, in London, a trooper prophesied the total ruin of the town, so an old woman has announced the fall of Leghorn on this day. I am now listening to hear the crash. . . . Hitherto, we at Pisa have not felt any earthquake, but we are in danger of being drowned by the incessant rains that have ruined the whole country."

In walking through the interesting old cemetery at Leghorn, filled with the graves of English and Americans who had been sent to Pisa, which was the great refuge for consumptives, and the only place in Tuscany where a Protestant could be properly buried (for, by the wisdom of the Medici founder, Leghorn was a free town for all religions, Christian, Jew, Mussulman, and Pagan), I came across the tombs of the too well-known Countess of Orford and Lady Cowper, and even of Francis Horner. I looked in vain for the grave of Sir Horace Mann, when I suddenly remembered that his body was taken to England for burial through the care of his friend. Sir Horace Walpole; and in the middle of the plot of ground I found the marble obelisk which marks the last resting-place of Tobias Smollett. E. S.

Correspondence.

A CINCINNATI APPOINTEE.

To the Editor of The Nation:

Sir: Your notice of "The Administration and its Pledges" (p. 418) may invite or excuse a further word from one of a long-suffering community. Mr. Cleveland was fortunate in his appointments to the Cincinnati offices, except as to the Internal Revenue Collector. The other appointees were not politicians by profession, and have proved to be creditable. Bishop, who was made Collector of Revenue here, got the appointment at the dictation of the ring, and against the wishes of the better sort, and now the character of that appointment emerges into daylight and becomes a public scandal. It is not Mr. Cleveland's fault; he was unfortunate.

It was hoped and expected of Mr. Harrison that he would escape misfortune in every case, and to aid him, and (as some of us understood him) at his request, the best non-partisan

points of public interest were laid before him. The last Mayor of the city was a man named Smith, who, in contempt of his oath of office, in contempt of his party pledges, and ignoring the remonstrances of the majority of the electors of this city, ignoring the mandate of the law all through his term, allowed the saloons as full license on Sundays as on any other day of the week, although the statute is explicit that they must be closed absolutely all that day. He was of the opinion that it was best for his advancement not to enforce the law, and yet, when the question of a renomination to the mayoralty came up, he found himself sadly in the minority. Thereupon he applied to the President for a place in which he could continue to subsist upon the public, and then it was that his record was laid before his Excellency, together with some other matters concerning his methods and character, and, after consideration, he is made Surveyor of Customs at this port, at the request of Mr. Sherman, Mr. Butterworth, and Mr. Halstead.

As soon as his appointment is made, his successor in office, also a Republican, issues an order which virtually says that he shall not interfere with the saloon men; nor will the police, unless reputable citizens will make specific complaint, issue warrants, and pledge themselves to do the prosecuting. We clothe the proper officers of the law with authority, furnish them with all necessary means, and pay their way, to enable and induce them to do their duty, and the head of them says openly to the citizens, if any man wants the law enforced in any particular case and will pay for it, the police will attend to it for him. That is the result of the endorsement given to Smith by the President after the whole matter had been fully brought before him, and after it had received his personal attention. Verily, as Mr. Lincoln said, the President is not President; the politician is President.—Yours very truly,

THEO. KEMPER.

CINCINNATI, May 25, 1889.

ETHICS OF BANKRUPTCY FOR MAGAZINES.

TO THE EDITOR OF THE NATION:

SIR: More than one "wretched contributor" cries Amen to "C. H. W.'s" protest in the last *Nation*. The magazine "management" of which he complains has carried on its wrongdoings in the most high-handed and unblushing manner. Its latest editor was so thoroughly ashamed of that "management" that he sent a circular letter to subscribers and contributors, disavowing any complicity whatever with that lawless "management." Can the *Nation* not tell us if there is no way by which to force "Mr. Davis," or whoever that "management" is, to disgorge our MSS., for which we all sent stamps for return?

If magazine publishers are not responsible for MSS. intrusted to them, as some claim not to be, is the retention of $1 or $2 worth of postage stamps anything more or less than petty thieving? In this connection, many of us recall the *Manhattan*. When that magazine was forced to suspend issue, it honorably continued its editor's salary till every contributor was paid and *every manuscript returned*.

Yours truly,

A WRETCHED CONTRIBUTOR.

Notes.

JOSEPH THOMSON, the admirable African explorer, has written 'Travels in the Atlas and Southern Morocco,' which Longmans, Green & Co. will publish immediately. Six maps and sixty illustrations accompany the narrative.

Porter & Coates, Philadelphia, publish directly the 'Life and Work of Eli and Sybil Jones,' preachers and missionaries for half a century in the Society of Friends, by Rufus M. Jones. The work will contain two portraits.

D. C. Heath & Co., Boston, will soon issue among their educational works De Garmo's 'Essentials of Method.' They have become the American publishers of Isaac Pitman's shorthand books.

White & Allen have arranged with William Blackwood & Sons, Edinburgh and London, to publish in this country their new series of 'Tales from *Blackwood's Magazine*.'

Worthington Co. announce for immediate publication 'Two Daughters of One Race,' a new novel, by W. Heimburg, author of 'Gertrude's Marriage.'

Mary Howitt's autobiography, in two volumes, edited by her daughter Margaret, is about to appear in England, with the imprint of Isbister & Co.

The London *Times* for April 27 announces the preparation by Baron Nordenskjöld, the noted Arctic navigator, of an atlas containing some fifty facsimile reproductions of ancient maps, the result of several years' researches among the museums and libraries of Europe. The accompanying text describes the methods of cartography from the time of Ptolemy downwards, and analyzes in detail the contents of each map. The introduction will treat very fully of the editions and pseudo-editions of Ptolemy, of which the Baron's private collection "is probably unapproached." It is of interest to us to learn that while he has made many important discoveries of very early printed maps, "he has found that little can be added to the cartographical literature of America, which has been diligently and very completely worked out." This work will be published, probably in the spring, in Stockholm, in a Swedish and English edition. The English translation is by Mr. J. A. Ekelöf of the Royal Swedish Navy, revised by Clements R. Markham, the well-known geographer.

The publishing firm of Abenheim, in Berlin, whose list was remarkable for the number of American authors upon it (as, Emerson, Holmes, Parkman, Bayard Taylor, C. K. Adams, Bret Harte, etc.), has sold out to Hans Lüstenöder. On the same list are five of the works of the eminent German lexicographer, Daniel Sanders, which Herr Lüstenöder has a mind to popularize still further in accordance with their deserts. To this end he has made substantial reductions in the price of several of them, including, we believe, the great 'Ergänzungs-Wörterbuch der Deutschen Sprache,' of which the price is now, at all events, forty marks.

Another volume of the Transactions of the Oneida Historical Society (1887–1888), containing a full report of the New Hartford Centennial Celebration of last June, is now obtainable of Warren C. Rowley, Treasurer, No. 56 Genesee St., Utica, N. Y.

Prof. Genung of Amherst College has supplemented his 'Handbook of Rhetoric' by a valuable 'Handbook of Rhetorical Analysis' (Boston: Ginn & Co.), subtitled "Studies in Style and Invention," in which he has gathered passages from standard authors, in the main, as examples to be used in illustrating good writing. The volume is of proper size, and at the foot of the page are questions to be used by teachers. The study of literature by the young, he properly observes, is likely to lack precision and penetration; it operates to form taste very gradually. He aims, by close examination of comparatively few pages, to give, or rather to extract from, the student the reason why the practice of the great authors is good, and to show its coincidence with the rules laid down in rhetoric. The method has much to commend it, in connection with rhetoric, and will enliven that study and give it a more practical aspect. The selections are excellent, ranging from Bunyan to George William Curtis and Mr. Shorthouse, and afford sufficient variety of treatment. The matter, however, is sometimes over the heads of any but the higher classes, and is adapted rather to colleges than to any except high-grade high-schools.

A new and enlarged edition of Smith's 'Synonyms Discriminated,' edited by the Rev. H. Percy Smith (Henry Holt & Co.), is a very valuable addition to the reference library of students. In a space of some 750 closely printed, double-columned pages, in clear type, a real dictionary has been included, in which words of synonymous meaning are briefly and carefully discriminated, with quotations largely derived from that most excellent source, Richardson. The work has been admirably done, and is unrivalled, so far as our observation goes, in books of this class. The addition of the derivation of words as a clue to their exact meaning is a noticeable feature, and the index at the end is a gain. The work had been practically completed by the author before his death, and is published in effect from his hand. In our list acknowledgment of this book, by the way, the price was set down errroneously: it is $2.25.

The increasing interest in the study of the lower, or flowerless, plants is likely to give us a large number of text-books of various sorts during the next few years. Among the forerunners of this impending blessing comes 'A Handbook of Cryptogamic Botany,' by A. W. Bennett and George Murray (Longmans, Green & Co.). Mr. Bennett is widely known by his excellent translation of an edition of a famous handbook by Prof. Sachs, and by many and varied editorial labors, as well as by his studies in certain fields of botany. He has undertaken all of the present volume except the fungi and allied forms, and has done his embarrassing work in a cautious manner. But he has left untouched at least one very important subject, and has failed to give full credit to some prominent investigators in the department of cryptogamic botany. Mr. Murray's work, likewise, has been carefully performed, and, with the exception of not having preserved what seems to us a proper sense of relationships and proportions, he has been successful in a task of exceedingly great difficulty. The work will serve well as a safe makeshift while we are waiting for more extensive treatises on the same subject.

The Messrs. Putnam extend their pretty Knickerbocker Nuggets series with three essays of De Quincey's—"Murder Considered as One of the Fine Arts," "Three Memorable Murders" (a parallel to the recent Whitechapel performances), and "The Spanish Nun"—all bound in one pair of covers, and 'The Wit and Wisdom of Sydney Smith.'

Smith's fellow-canon of St. Paul's, Barham, is revived in his 'Ingoldsby Legends,' by Frederick Warne & Co. This substantial production has been got into a little more than 500 pages without any extra demand on the eyes, and in tasteful typographical dress and neat binding. A portrait of Barham, and comic designs by Cruikshank, Leech, and others embellish the volume, which can in all respects be recommended to the low-spirited.

A well-known suburb of Boston, consisting

of many villages that mostly bear the name of Newton, is given, in the series of Handbooks of the Moses King Corporation, a volume very nearly as large as that devoted to Boston itself in the same series. It has been competently edited by Mr. M. F. Sweetser, and its illustrations, chiefly of private residences (though the charming scenery of the Newtons goes not wholly unsuggested), are very numerous. The local satisfaction with this handbook must be complete.

In the May number of the Harvard University Bulletin, two instances are recorded of past beneficiaries (a Greeley and a Greeley Clarke) returning to the college treasury the sums allowed them from the scholarship funds. This restitution has heretofore been rather uncommon, and most conspicuous in the Divinity School. The Corporation now think it useful to open an account analogous to the Conscience Fund of the U. S. Treasury, and to be called "Scholarship and Beneficiary money returned." No doubt this will stimulate the practice. In the same issue, the death of Chevreul is catalogued on account of his having received an honorary degree from Harvard, he being, too, the oldest person who ever did. Still, Judge Timothy Farrar came only just a year behind him; and two graduates, the Rev. John Sawyer of Dartmouth, and Nathan Birdseye of Yale, lived to be 103 years and five days, and 103 years, five months, and nine days, respectively, thus surpassing Chevreul (102 years, seven months, nine days).

The two recent notable occasions at Johns Hopkins are recalled by a pamphlet containing the new Constitution of Japan, with the speeches addressed to students of Political Science in the University on April 17, of which a limited edition is for sale at the Publication Agency, Baltimore; and by a reprint from the *Medical News* of Surgeon Billings's address at the opening of the Johns Hopkins Hospital on May 7.

A third pamphlet gives us the organization and an historical sketch of the Women's Anthropological Society of America, founded in Washington in 1885, and having now forty-five active members. Miss Alice Fletcher, one of the vice-presidents, is the name best known to science among the officers. One of the members, Miss Eliza R. Scidmore, is said to have in preparation a work on Corea. Another, Miss Sarah A. Scull, was for a year a student at the American School of Classical Studies in Athens. The proceedings of the Society have been varied and pertinent.

In the January number of the *Monatshefte zur Statistik des Deutschen Reichs*, is a table giving a synopsis of German emigration since 1871. The total for the period is 1,769,297. Of these emigrants the destination of 1,618,816 was the United States; 33,443 went to Brazil, 15,599 to other parts of South America, 16,341 to Australia, 4,780 to British North America, 4,047 to Africa, and 1,086 to Asia. There remain unaccounted for 74,685 emigrants sailing from French ports, though it is believed that nearly all of these went to the United States. The year of highest emigration was 1881, when 220,902 Germans left their fatherland. The lowest number of emigrants during any year of the period is found in 1877, viz., 22,898. Brazil received most of her Germans long ago, nearly 9,000 going to that empire in 1872-73. Latterly the tide has run much more strongly to other parts of South America, 1,723 going there in 1888, for example, while but 1,129 went to Brazil. The total emigration in 1886 amounted to 83,218, a lower figure than for seven years previous. In 1887, it was 104,659; in 1888, 98,568 (with returns from Havre wanting).

The late Count Tolstoi, who as Minister of the Interior held perhaps the most important place in the Russian Empire, had also some reputation as a man of letters. He was President of the Academy of Sciences at St. Petersburg, and of the literary section of it, and was the author of important works on the history of Russia and on education since the time of Catharine. He also wrote a book in French, a 'Histoire du Catholicisme en Russie,' in three volumes octavo.

The Hartford Theological Seminary has decided to admit women to all its regular courses of study. This is an extremely important decision. The prudent prophet would have thought himself safe in saying that this particular seminary would be the last, instead of the first, to grant such a concession. It seems to show that the unwise custom of barring out women, whose minds are weak, from all the possible sources for making them stronger, is more widely undermined than the prudent prophet had supposed.

—Many readers will first turn to the illustrated article in the June *Harper's* by Henry James, in which he describes the work and personalities of "Our Artists in Europe," and sketches the village of Broadway, which is their gathering-place. F. D. Millet, Abbey, Alfred Parsons, Boughton, Du Maurier, and Reinhart are the heroes of his friendly encomiums and of the engravings which show their portraits and some of the scenes of Broadway. Other much-illustrated articles are the account of the ever-interesting city of Montreal, with its picturesque and modern-commercial traits; the history of the "Negro on the Stage," from the competent pen of Laurence Hutton, and two poems, Praed's "Quince," and a sonnet of Wordsworth's, which are pictured in the customary way. The second article upon "Social Life in Russia," by Vicomte de Vogüé, takes the reader into the country, and finally to a Cossack estate. A very seasonable discussion of the matter of "Psychic Research," summarizing what is known of the phenomena investigated under that name, and laying down the scientific law of belief in respect to them, is contributed by Dr. Jastrow, and should be useful to those who are superstitiously inclined. The great emphasis which he lays upon the necessity of a certain technical training in these problems before any judgment should be made at first hand, conveys a much-needed warning.

—In his timely essay on Saturn's rings, in *Harper's*, Prof. George H. Darwin of Trinity College, Cambridge, has done a real service in popularizing the results of the abstruse mathematical researches of Laplace, Roche, and Maxwell on these bodies. New light is thrown on the interpretation of Laplace's well-known labors, and the discovery, as it may be termed, which Prof. Darwin has made, of the significant work of M. Édouard Roche, is duly emphasized. This man of genius, as he is called, published, or rather entombed, all his papers in the Memoirs of the Academy of Sciences of Montpellier, an old city in the south of France. So little known are they that Prof. Darwin says he has not yet met a single English mathematician who has read them. So long ago as 1848, Roche investigated the effects of the attraction of a planet upon the figure of its satellite, rendering it oviform, and determined the limiting degree of this elongation, or, what is the same thing in the terrestrial system, the limiting proximity of the moon to the earth. This Prof. Darwin terms Roche's limit; and the conclusion is that if, anywhere in the heavens, matter is found circulating about a planet inside of this limit, it can only be in the form of rocks, dust, and fragments. Saturn is the only such body, and the only planet with rings; and the belief is thus justified that Saturn's rings consist of dust and fragments. This is recognizable as the accepted view of astronomers to-day, but it is such in consequence of the researches of Maxwell, which thus were antedated nearly a decade by those of Roche. Maxwell showed, too, that a spreading of the rings, both inward and outward, was a theoretical result of the inevitable impacts between the constituent meteorites. As the periphery of the outer rings already lies near Roche's limit, the spreading must in time carry many meteorites beyond. Here will exist no obstacle to their aggregation into a definite body, and a ninth satellite of Saturn may thus be formed. The inward spreading will continue until the meteorites reach the outer regions of the planet's atmosphere, where, heated by friction, they will disintegrate, and fall upon Saturn as dust. The evolution of the remote future may thus rob the Saturnian system of the unique charm of its rings, and an additional plain satellite will form the only relic.

— The June *Atlantic* opens with an account of the Eiffel Tower, in which the history of its construction is narrated; but, after reading it, one should turn to the end of the magazine, where he will find a clever translation, in the Contributors' Club, of François Coppée's striking poem upon this "Yankee's Dream," in which sarcasm and patriotic feeling and criticism of materialism are cunningly blended to make this wonder of the Exposition contemptible. The two views, both well expressed, will thus be brought side by side. The most unusual and pleasantest article is a short sketch by Prof. C. E. Norton, in which he pays a tribute to the Venetian antiquarian scholar, Rawdon Brown, and tells how the latter found the tombstone of "banished Norfolk," in search of whose resting-place Brown had left England in his early days, and had in the course of it found Venice so enchanting that, although he lived fifty years longer, he never revisited his native country. The remainder of the number is devoted to "solid" reading. "The German Gymnasium's" methods of work are detailed with the carefulness of a prospectus; the origin of the tales of the 'Thousand and One Nights' is speculated upon by a scholarly pen; the relations of Church, State, and School, made a current question by the parochial-school agitation in Massachusetts, are treated in the broad manner and after the philosophical conception of Dr. Mulford; the city of Birmingham is historically and socially analyzed and eulogized; and the traits of the Australasian colonists are described and their future slightly forecast in the second article of Prof. Royce. These valuable articles exhibit the variety and seriousness which often characterize this magazine, and literature is represented by the serials of Henry James and Mr. Bynner.

—The *Century* is exceedingly rich in articles of interest and value. Mr. Kennan opens the subject of the ill-famed Kara mines, but in the present instalment advances no further than description of the country and of the interior of some of the prisons, of one of which he makes a sickening recital. The philanthropy of New York is illustrated by an able paper upon the work done by women for women in this city, and its interest is enhanced by some thoughtful but disturbing reflections upon the nature of the problem to be met. Entirely different in attraction is the sketch of the English bloodhound, with excellent cuts, from the pen of an enthusiastic lover of the breed, which is

represented as far from the terrible creature that our legends of the Cuban slave-hunting variety have made familiar. The author advocates their employment in tracking criminals, and does not despair of their capacity to be specially trained to follow "the clean boot," even over the stones of London pavements. The artistic article is upon Corot, and is thorough in its treatment, mingling the biographical, the critical, and the personal strains of interest in a masterly way. The presentation of the claims of idealism in landscape is admirable in clearness and well brought home by reference to Corot's work, so that we would gladly make extracts did our space permit. The closing years of Gen. Lee's life are sympathetically written of by Mrs. Preston, whose opportunities for observation were great; and several characteristic anecdotes, slight in themselves, but illustrative of a kind and honorable nature, are added to our knowledge of Lee's personality. The Lincoln Life takes up the critical subject of Chase's candidacy for the Presidency, with great consideration for Chase; and at the end there is an appreciative note of an American astronomer, S. W. Burnham, whose work, both from its conditions and results, makes an interesting story.

—*Scribner's* presents this month the first of its long-announced series of papers upon Electricity, and devotes its initial paper to a brief account of the instruments, simple characteristics, and methods of measurement of the force in its modern applications. To judge by the present paper, the topic will not prove easy reading. A very useful article is the full account of the Building and Loan Associations which have had so useful and prosperous a career, and seem likely to prove of vastly greater value in the immediate future. The Sicilian town of Castrogiovanni, the ancient Enna, gives material for an excellent and out-of-the-way travel paper, in which the historical variety and the rare characteristics of the island are prominently dealt with. The most important contribution, however, is Prof. Drummond's description of the Arab slave trade, now working untold misery in Africa and depopulating whole districts of the interior by means of the utmost barbarity. He quotes from unquestionable authorities the scenes which he brings forward, and reminds us of what is being done or proposed by European Powers for the suppression of this trade; he agrees that a resort to physical force is now in some measure necessary, but he nevertheless repeats his conviction that the long-established peace policy of the British Anti-Slavery Society is to be adhered to, in spite of all temptations to radical measures. At the close of his cruel story he makes a vigorous appeal to this country for assistance, and expresses the hope that our national policy of not meddling in foreign affairs will not be interpreted as cutting us off from participation in the common humane efforts of foreign nations when our aid may be of value. Mr. Schuyler, in his second paper on Tolstoi, treats at large of the quarrel between him and Turgeneff, and holds out hopes of his return to literary labors.

—The list of really good historical text-books receives a useful addition in Mr. D. H. Montgomery's 'Leading Facts in French History' (Ginn & Co.). It is a marked advance on any available work of its scope. The author has shown competent judgment in the choice of his facts, and his style is clear and interesting. The proportions are well observed, and the political significance of events is given due prominence in his treatment. So far as we have noticed, unusual accuracy has been achieved; yet there are one or two details to which attention may be called. Mr. Montgomery depicts with considerable vividness the apprehensions of the immediate end of the world which beset men as the year 1000 approached. Our faith in this commonplace of mediæval history has been considerably shattered by the painstaking investigations of Orsi ('L'Anno Mille'), Roy ('L'An Mille'), and H. von Eicken, who have examined the evidence as regards Italy, France, and Germany respectively, and pronounced it totally inadequate, and dismissed this favorite and picturesque generalization as a myth of modern historians. We do not think that the evidence warrants quite so positive a conclusion, but there can be no doubt that the prevalence and depressing effects of this fear have been greatly exaggerated. One of the proofs, the use of the phrase, "appropinquante fine mundi," in the beginning of bequests, is shown to be no proof, as its use is general all through the Middle Ages. The coronation of Charlemagne in 800 is spoken of as a revival of "the title of Emperor of the West." But this title was not only not used, but contrary to the fundamental theory of the time. Mr. Montgomery indicates the pronunciation of French names by a phonetic spelling. It seems to us that in most cases that is best left to the teacher. Without the guidance of the living voice, any phonetic spelling is apt to lead the pupil to adopt a "tertium quid" which is neither French nor English, and would be equally unintelligible to hearers of either race. Feudalism is certainly misapprehended when it is described as "giving every man his due place and work. If he was able he rose to the top; if he was incapable he sank to the bottom." That does not describe a society organized on the principle of *status*. It is an error, or, at any rate, misleading, to say that Rabelais was at one time a "mendicant friar." We regret that Mr. Montgomery ended his narrative with the establishment of the Third Republic; a brief account of the last eighteen years would have added much to the interest and value of his work.

—There have been in late numbers of the *Temps* a series of short articles, "Billets du Matin," signed T., which is, if the *Paris* is well informed, the initial of M. André Theuriet. One of these, which appeared on May 9, is a note from Renan addressed to the writer, apparently in answer to an invitation to visit the Exposition. After saying that a return of illness has kept him so far from visiting "cette chère Exposition," which he blesses for bringing a little joy, and forgetfulness, and cordiality, and sympathy into human life, M. Renan goes on:

"I saw the preparations for it, some weeks ago, from the height of the Trocadéro: it affected me like the *Villa Adriana*, like one of those holidays of the time of Hadrian, brilliant, a little composite, eclectic to excess, but which we regard with tenderness as the last smiles of a world that is coming to its end. But even supposing that the Exposition of 1889 shall be the last time that men shall come together to give themselves up to the sports and merriment of childhood, the melancholy in this thought will not be of a nature to make it less poetic or less suggestive to us. And then, after all, who knows the future? You think me more a pessimist than I am. I am indeed alarmed at seeing so stately a tradition as that of the French Royalty handed on to a sovereign so narrow and so light-minded, so accessible to calumny, so open to surprise, as the populace, represented by universal suffrage. But I do not deny that the present hour has its advantages and its consolations. Liberty is greater than it has ever been in this country, or, perhaps, anywhere. The exaggerated criticisms which have been made upon the present régime have sprung from minds ignorant of the past and over-confident of the future. If this only lasts! —that is the sole misgiving that need trouble our content. If it concerned only our miserable selves, we might scoff at foresight, and take chances, and run risks. But it concerns the interests and destinies of France. When I turn the page of the *Temps* on which I read those consoling reports of holiday-making, that fine speech of M. Carnot's, I find this under the heading 'Saint-Ouen':

M. le général Boulanger.....1,043 Élu.
M. Naquet, boulangiste..... 981 "
M. Laguerre, boulangiste.... 981 "
M. Déroulède, boulangiste... 979 "

Some of those to whom I have spoken of this have told me that Saint-Ouen is not a very enlightened spot. That is possible; but I fear that there are in France a great many districts that are, in point of politics, not much more enlightened than Saint-Ouen."

—He concludes, in words which we will not translate, as follows:

"Voilà pourquoi, par moments, je ne peux m'empêcher de voir, entre les rayons de ce beau soleil couchant, un nuage sombre frangé d'or d'où pourrait bien sortir un *rokh* qui emporterait tout. Enfin, continuons d'espérer en la raison, et croyez à ma vive amitié."

How far this rather gloomy letter represents M. Renan's mood when he is sick, and how far an habitual mood, we will not say. One would not be in any haste to say even how much of it he believes to be serious, for M. Renan is so often and so much a *persifleur* as to provoke the suspicion that a good deal of his gloom is "only his fun." But it is pleasant to think that, however sincere his pessimism may be, it is not without its consolations, and that if he is cast down by the Republic and its prospects, he is not destroyed.

THE ART AND INDUSTRIES OF JAPAN.

The Industries of Japan, together with an Account of its Agriculture, Forestry, Arts, and Commerce. From travels and researches undertaken at the cost of the Prussian Government. By J. J. Rein, Professor of Geography in the University of Bonn. With 44 illustrations and 3 maps. A. C. Armstrong & Son. 1889.

Japan and its Art. By Marcus B. Huish, LL.B. London: The Fine Art Society. 1889.

GERMAN thoroughness of research, and a willingness to go deep and to search far, even when immediate profit is not to be looked for, are pleasantly characteristic of Professor Rein's second treatise. The first, which we reviewed in a previous number, is now declared to have been deliberately undertaken as a "preliminary study towards a better understanding of the various phenomena of industrial life"—namely, in Japan. The present volume has to do with the phenomena in question.

Half of the volume is devoted to agricultural industries, which important contribution to knowledge is divided as follows: In the first place, there is a but too brief essay on Japanese agriculture in general. Such evidences of minute and careful observation there are that one could wish that it had been allowed to go further into detail. Neither is it hard reading. By some process of sublimation different from ordinary translation from one language into another, the English style is made pleasant and readable, and one not necessarily agricultural in his tastes finds himself reading these pages as if of an amusing book of travels. This is followed by a good, solid discussion of the food-plants of Japan, under which head are included especially those which are used mainly by the people themselves, the exportation plants being generally excluded. Grains, starch-producing bulbs, fruits, and the like; then articles of food and luxury prepared by some chemical or other process from the natural productions, from the simplest prepa-

ration of tea through all the fermented and distilled drinks—the whole supply of the people's food as obtained from the vegetable kingdom is contained in this discussion. It is interesting to observe how practical has been the writer's observation. Thus, he cannot write upon rice without pausing a moment in his exposition of the method of its cultivation to tell us how it is cooked—advice by no means superfluous to Americans, who (at the North at least) are apt to make a horrible porridge of rice, and most of whom do not even know what its proper cooking and serving is.

The third department deals with "plants of commerce," by which is meant the articles that are exported or exportable—or so it seems to be intended. Tea, tobacco, different drugs, different oil-producing plants, different fibre-producing plants, are included in this chapter; it being assumed that rice and pulse, and such articles of food, can hardly, in our time at least, be exported from a thickly settled country like Japan, and that the commerce of the West with the sunrise country can only be in such productions of the soil as are costly in comparison to their bulk. The author tells us a hundred good stories as he goes on with his examination, enlivening his mass of statistics with the most interesting, though brief, accounts of manners and customs in connection with the subject in hand. Thus, the Japanese smoking apparatus is the subject of an entertaining little discussion, and we are told that the author's refusal of the constantly offered whiff of tobacco excited great surprise among the Japanese, "for they can hardly imagine a foreigner who does not like tobacco." In this case we can imagine that the surprise was about as great as among his own friends at home. A non-smoker in the University of Bonn must have been nearly as remarkable as in Japan. It appears, too, that the Japanese still use an expression equivalent to the ancient English phrase, "drinking tobacco"; further, that in Germany the earliest used phrase for smoking had the same signification, and Freytag is cited as having told us as much in his 'Bilder aus der Deutschen Vergangenheit.' It is well pointed out how liable to change is the Japanese production of drugs and similar high-priced articles, on account of the modifications in Japanese life and manners now going on, and so uncertain in their results. Thus ginseng, which has been so much in demand in Japan that the production has not been more than enough for home consumption, the demand for it in China being meanwhile so great that the United States alone are put down as having sent $700,000 worth in 1877, is passing out of favor in Japan because of the introduction of European ideas of medicine. The free and rapid growth of the camphor tree in the southern part of the empire; the large production of hemp, and the skill that has been shown in producing from it "fine white textiles, not much inferior to good European linen"; cotton cultivation; and an admirably suggestive account of an enormous number of fibrous plants, make up the greater part of this important chapter.

The next division has to do with cattle-raising and silk-growing, of which, perhaps, the most generally interesting part is the discussion of the silk-producing caterpillar, called the *yama mayu*, a creature which feeds on the green leaves of the oak. The author thinks that the product of this insect is less important than has been asserted, and tells us of the complete failure to naturalize the creature in Europe to any profitable extent. There is mentioned another wild silkworm of Japan, which feeds upon the leaves of the chestnut, walnut, and other trees; but it does not seem to be recognized as of importance. The chapter on forestry deals with timber-growing, carpenter-work, house-building, etc., which leads to a separate discussion, on different lines, of the individual trees which the author thinks most important for foreigners to investigate. And in this connection it may be said that a system of cross-references would be a useful addition to this book, for these trees come under consideration in several different chapters. It is true that, in addition to an index which is rather unusually full and presumably accurate, there is a table of contents more useful than is common, as the sub-sections are mentioned, and the number of the opening page of each.

Following immediately upon the essay on trees is a chapter devoted to Japanese gardening, which, with its account of the dwarfed plants and the highly artificial, small-scale horticulture of the Japanese, is oddly remote from the practical and commercial character of what has gone before. The word "nanisation" is introduced to express the dwarfing of large trees, which, as is well known, is a special aim of Japanese gardening, and with which our author quarrels more, perhaps, than is advisable. He seems to think that the Japanese care only for the unnatural and the forced plant. Although he continually admits, and even insists upon, the love of these people for free and wild nature, yet, when he is dealing with the gardeners, he appears to think it bad taste in them to enjoy these *tours de force*, these pine trees and bamboos that would go under a tumbler, and aged forest trees not more than five inches high. He quotes Kaemper's account of the box he saw, four inches long and one inch and a half broad, in which were growing together a bamboo, a pine tree, and a plum tree in flower. Now, the Japanese, in their crowded country (which, as our author himself states in another place, supports a large population on one-fifth only of its surface, the rest being taken up with forests and wild land), have always been somewhat in the condition of the inhabitants of our cities. Land is precious to them, and the piece of ground that one takes up for his garden must be utilized to the utmost. Mr. Hamerton may be right enough in his frequently expressed contempt for gardens, and his preference for a "mile of wild trout stream" over the most beautiful decorative grounds; but there is among the Japanese no lack of appreciation of the wild trout stream, the mountain forest, the savage gorge, the snowclad peak. In all these things they are as advanced as Europeans, while in all the matters of decoration properly so called they are immeasurably in advance of them.

It comes, then, with rather poor grace from a European, and most of all from a German—that is, from a native of the least artistic of European countries — this somewhat supercilious setting down of Japanese garden fancies as necessarily inferior to the European idea. The fancy for dwarf gardening is a whim, like another, and the Japanese, with their love for nature and for decorative art, are entitled to as many whims of this sort as they can be accused of. No doubt, the dwarf tree, or group of dwarf trees, is not the thing that we care most to study in Japanese decorative design; but this is because we are not in the way of learning anything from it, not because it is in itself either ugly or uninteresting. A similar bit of Western conceit is to be seen in the remarks upon the Japanese arrangement of cut flowers. We are told that the enjoyment of beautiful flowers is common, and that what is admired is their individual beauty or their natural combinations. But another sentence states that the "arrangement and coloring of bouquets is not understood by the Japanese." Let us now insert "fortunately" after "is," and this sentence will be in keeping with the facts that precede and follow it. The actual fact is, that the arranging of fresh flowers is a very special art, carefully taught, among the Japanese.

There is a brief chapter on mining, which includes mention of potter's clay, porcelain clay, and the quarrying and extraction of stones, whether for building or decorative purposes; and following this comes that part of the book which will, perhaps, have the most interest for Western people, namely, the account of art industry and related occupations. This is brief, compared with what has been given in other works, in English and French, but it has the peculiar advantage of having been composed on the spot (at least to all appearance), and of being authentic as far as it goes. Moreover, it is devoted entirely to facts about the manufacture and decoration of the objects described, with no attempt to describe the legendary and mythological decorations with which they are covered, or the excellences of the different manufactures. The writer, with praiseworthy thoroughness, describes what he has seen and has learned at first hand, enlivening his narrative by allusions to the more entertaining peculiarities of the delicate work of the Japanese. Thus he speaks of that property of the magical mirrors of showing in the reflections of the face the patterns in relief on the back; he alludes to that peculiarity of bronze that it is freely worked with hammer and chisel as well as with the burin, and he amuses himself and his readers by a description of those peculiar rock-crystal balls, increasing in value according to a scale out of all proportion to their increasing size, which, although not limited to the modern far East, are almost so in the experience of collectors and amateurs. Finally, although it has been said above that but little space is given to the subjects treated in Japanese art, yet it must be stated that mention is made of a few of those plants and birds, whether real or fabulous, and a few of those conventional scenes and formal patterns, which enter most freely into their decoration. It is fortunate that so little of this is done. Our author's art criticisms are extremely conservative, and are those which one might expect from Mark Twain's favorite Sunday-school superintendent, rather than from a student of Eastern art. Thus, he is absolutely certain that the disposition of an artist, whether Western or Eastern, to deal with "dreadful scenes where blood and the odor of death prevail" is to be always reprobated, and he asserts in the same sentence that this taste has never found favor with the Japanese; both of which statements are as untrue as it is possible for statements to be. Japanese pictorial art is assuredly not without representations of those atrocious cruelties which are almost peculiar to Eastern justice and Eastern tyranny, as compared with the European government and administration of law, at least of modern times.

It is certainly not for criticism of Japanese art that we recommend any one to study this book, but for its minute and evidently thoroughly studied accounts of the artistical and industrial processes involved. For example, the account of lacquer ware, although not by any means the only long and minute description of its manufacture that we have, has every appearance of being the most carefully verified of all; and the brief account of the methods of weaving certain textile fabrics has all the appearance of remarkable accuracy. In

this connection, too, one is glad to perceive that the value and merit of recent Japanese industrial art are recognized. One paragraph on page 306 states the whole case accurately as regards this very industry of decorative lacquer. It was feared, at the time of the breaking up of the old order of things, from 1868 to 1870, that soon the last worker in fine lacquer would have disappeared from Japan; but, our author goes on, with the new impulse from abroad and the renewed care for their old art on the part of the Japanese nobles, who were now newly enriched, artistic productions in lacquer ware were "once more made to pay, and the result is that to-day there are *makiye-shi* in Japan whose works may be placed side by side with the best of olden times." Now, this is strictly true, and it is good to see that our author, who apparently has not a quick eye for minute discriminations in decorative art, should have perceived or have learned this fact. The modern lacquers are not exactly like the old ones. Nobody ought to expect to find modern lacquers precisely the same as those of one hundred and fifty years ago, unless they are minute copies of given ancient specimens. The modern work in fine lacquer ranks with the ancient in design, in minuteness, in finish, in all that makes work admirable. Whether it is equal in refined taste or not, is a question which different amateurs will answer in different ways.

The work of Mr. Huish is in a sense the complement of the one last described. It is a good embodiment and condensation of the general stock of European knowledge and conjecture about Japan, derived from the stories of travellers, the partial translation of documents, the minute study of works of art, and the comparison of statements of different European authors. In the European languages there exists already a considerable body of critical and historical analyses of the fine and industrial arts of Japan, and this is constantly undergoing a process of checking and correcting, partly by the aid of educated Japanese who are residing in Europe and America, and partly by the statements of European visitors to Japan. But with these last there is this difficulty, that nearly all of them are persons who have gone to the East to teach and to preach, and not to learn, and who begin with a contempt for all that religion and all that intellectual training which they are bound especially to supersede. These, having the non-artistic European's noble scorn for a dark and non-Caucasian race, go on with the thought that any notice that may be bestowed upon such heathenism, such superstition, as that which is embodied in Japanese literature and art is a favor done it and a great concession to Western curiosity. It must be remembered, too, that translation from an Eastern into a European language is enormously difficult.

The reflection of this partly erroneous, but in the main correct idea, which the Western lovers of decorative art have formed of Japan, of her legends and traditions, and of the true meaning of her refined art, is what is found in Mr. Huish's book. Any cultivated Japanese will point out by the score what he believes to be errors, most of which undoubtedly are errors either in substance or form. The author, who does not pretend to have visited Japan, or to be versed in the language, would probably be as ready as any one to say that even approximate accuracy was most difficult to attain. But, on the other hand, so far as it is instructive to converse with the collector and student of Japanese art, with one who has frequented the shops and the sales of vast London in search of Japanese curios, and who has carried with him in the search the taste and the inquiring spirit of a real lover of art—so far it will be well for every one to become familiar with this book. There will be found in it the discoveries and the ideas of many London specialists, the correcting opinions of a native Japanese student, who is named in the preface; 120 illustrations, mostly very tolerable "process" prints from Japanese drawings, carvings, weapons, and the like; references to many authors who have written about Japan and its arts, together with memoranda as to the value of other books to explain or to illustrate the technical terms and the true feeling underlying all for the value and beauty of Japanese art, which must inspire and edify the reader; and with all this the book is light in the hand and pleasant to look at.

THE CENTURY DICTIONARY.

The Century Dictionary. An Encyclopedic Lexicon of the English Language. Prepared under the superintendence of William Dwight Whitney, Ph.D., LL.D., Professor of Sanskrit and Comparative Philology in Yale University. Section I. New York: The Century Co. 1889.

THE Century Company is now about to publish the first section of its encyclopædic lexicon of the English language, and an advance copy has been submitted to the *Nation* for review. This work has extraordinary prestige from the eminence of its editor-in-chief, Prof. W. D. Whitney, and his collaborators, and from its publishers. It has been in active preparation for seven years, and it is said that no American house has undertaken a work of greater magnitude or importance. There is certainly no American house which the public would more confidently expect to carry through such a work with honor.

The sections are bound in flexible cloth, strongly, so as to make a convenient working volume. However high expectations may have been raised, no book-lover will open this section without a glow of pleasure. It is the handsomest dictionary that ever was made. Grimm and Littré are level fields of uniform types. The Historical Dictionary of the Clarendon Press uses freely a large variety of types, and shows a page which is a delight to the eye; but, in addition to all the resources of the printer in types, the 'Century Dictionary' employs those of the engraver. It is full of admirable pictorial illustrations, far superior as works of art to those in any former dictionary, and the paper and presswork correspond. The cuts remind us at once that this is not a simple word-book, a mere dictionary, but an "encyclopedic lexicon." It undertakes to give not only words with their spelling, pronunciation, history, and definitions, but also some account of the objects denoted by the words, and interesting items of information about them, such as are found in encyclopædias. It is not to be classed, therefore, with works of pure linguistic science, with the great historical dictionaries of Grimm and the Philological Society, with which its form and size just now suggested a comparison, but with Webster and his followers, Worcester and the 'Imperial Dictionary.' It is an apotheosis of Webster.

Its purpose is to tell any one who is puzzled with anything he reads or hears in English, exactly what he needs to know in order to understand the matter. He must be able, then, to find any word he looks for. For this the 'Century Dictionary' may be hopefully trusted to its date. Hundreds of new words are made every year. It has, of course, the words in former dictionaries. It has liberally enlarged the number found in other dictionaries of obsolete, dialectic and provincial, colloquial and slang words, especially Americanisms, and has recorded with great fulness the special terms of the sciences, arts, and trades. Specially trained readers have been collecting new words and new meanings for it for many years. It will be strong in phrases, giving important special denotations of the main words. Under *act*, for example, there are described not only *act of God*, *act of grace*, and the like, *Acts of the Apostles*, *Black Acts*, and the like, but *Jekyll's Act*, an English statute of 1736 against liquor-selling, *Riddleberger Act*, *Yazoo Frauds Act*, and others, fifty *acts* or so. About 200,000 separate words and 30,000 phrases are promised. (The 'Encyclopædic Dictionary' of Cassell & Co. is the latest and has the largest vocabulary of the former dictionaries. It gives 180,000 words.) In the portion which we have examined the phrases seem well selected, such as are frequently used and need explanation, and numerous enough. But, of course, they are open to criticism. It is in the nature of the case that everybody finds something to wonder at in the contents of a cyclopædia—the exclusion of this, the inclusion of that. We grumble at our 'Encyclopædia Britannica' for not having an article on a subject in which we are interested, at our 'Cyclopædia of American Biography' for omitting our heroes and filling pages with nobodies. A critic who can find nothing incorrect will find many things omitted. There are important "acts" which are not here. But the comprehensiveness of this work in comparison with its predecessors, and the general good judgment of the editors, cannot be questioned.

Going on with our examination, we look next at the spelling. This is what might be expected from Prof. Whitney. The spellings current in England and America are given. Older and rare spellings are added in different type. The best form is indicated. "The essentially phonetic rule of spelling, that of two or more forms which have equal authority, or are equally supported by usage, the one is to be preferred which is simplest or nearest the phonetic standard, has been adopted." Besides this recognition of the supremacy of reason, of scientific law over living forms of words, attention is carefully called to approved spellings which are in conflict with etymological truth, as the *h* in *aghast*, the *ff* in *afford*, so that the Dictionary is well in line with the best linguistic science in phonology.

Similar remarks may be made about the pronunciation. Prof. Whitney gives this more minutely than it is given by other dictionaries except that of Dr. Murray. Conversational pronunciation is a subject with which the active students of language are specially busy, and it has led to the bringing into prominence great differences of pronunciation among those who have been heretofore considered as using the standard pronunciation of the dictionaries. This standard pronunciation gives mainly the sound of the accented syllables when clearly and forcibly articulated as a trained orator speaks to a large audience. But the phonologists have adopted a new ideal, the natural conversational speech of a gentleman unspoiled by teachers of elocution. The speech of Londoners of this class is carefully recorded, and commended to others as standard English. It is quite different from what has been considered standard English in America, especially in the extent to which the neutral vowel (ŭ in *but*, *burn*) is used. The Londoner begins the Bible thus: "Thŭ Fŭŭst Book ŭv Mosŭs, called Genŭsis. In thŭ bŭginning God creatŭd thŭ heavŭns ŭn

the ŭŭth." *Circumstance* has but one vowel sound, "cŭcŭmstŭnce." As these examples show, *r* after a vowel is silent or sounded ŭ: final *r* is movable and excrescent; thus, in *hair* alone it is silent (hăă), but before a vowel, as in *hair oil*, it is sounded. After final *a*, *r* is excrescent before a word beginning with a vowel, as in *idea is* (idear is). Initial *h* may be silent, as in *which*, or movable, as in *home* (*at ome*), *he* or *e*, and the like.

Such speech is now spoken in the south of England. The prevailing forces of our day make for uniformity in language, a general standard for all speakers of English. If it is to be preserved, it is time to record a standard conversational utterance of the unaccented letters. This very difficult and delicate task Prof. Whitney has performed in a manner which will not escape criticism, but which will commend itself to the general judgment of English-speaking men.

In Latin and Greek phrases, like *A fortiori*, which are often now pronounced in the so-called Roman method, and in scientific terms which have no popular pronunciation, but are uttered by scientists and others very much hap-hazard, Prof. Whitney gives a pronunciation according to English analogies. Dr. Murray has described his adventures in search of this kind of knowledge; his appeals to the introducers of such words who tell him they never thought how to pronounce them, and leave it to him; his attending meetings of learned societies, at one of which he heard his word *gaseous* systematically pronounced in six different ways by as many eminent physicists. They would let Prof. Whitney pronounce as he pleases; it is not so certain they will let him correct them. And it is certain that very few of them ever get through all the syllables of any of their sesquipedalia correctly according to the English pronunciation.

The authorities in favor of the different pronunciations are not given, as in Worcester's Dictionary. We have found it a considerable convenience in Worcester to have them together. The historical side of pronunciation is the least labored of any part of the 'Century Dictionary': how words were pronounced in Shakspere's time, in Chaucer's time, or any time but the present, we are not told. It is a difficult subject — the great Historical Dictionary does not attempt it. Perhaps it would not pay to introduce it even if the materials were at hand, but there are a good many anecdotes which are interesting and noteworthy, and encyclopædic. Doubtless many such will appear; under *oblige*, perhaps, we may find quoted: "It will become your royal mouth better to say *oblige*."

The etymology is the most thoroughly elaborated part of the work. The derivation of each word and its relation to other words in many languages is more thoroughly given than in any other general dictionary, and probably more fully than in any special etymological dictionary, though it is condensed to the last degree. A system of signs is used by which the relations of the words are expressed with algebraic precision and conciseness, so that it does not occupy very much space. The thoroughness consists in handling carefully every part of every word. Not only the principal part, the root part, but every affix and suffix, has its full discussion; and if, upon putting them together, any letter in the word remains unexplained, the origin of that is given. In *amidst*, for example, not only is *mid* traced back to the beginning of things, but the prefix *a*, and the adverbial genitive ending *s*, and these make the whole word in middle English. There is then a special explanation of the final *t*, as a phonetic addition, according to a special law. The work is freshly done on the basis of the latest authorities, with independent judgment and a thorough verification of all the words cited. Original suggestions are not wanting, as that of *akimbo*, based on the earliest passage in which it has been found.

"The hoost . . . set his hond *in kene bowe*.
Woulst thow, said he to Beryn, for to skorne me?"

Here *in kene bowe* is interpreted *with sharp elbow*, an attitude of defiance. So *alewife*, which has been thought an example of transformation by folk etymology from Indian *aloofe*, recorded in 1678, has been found in full form in 1670, "Big-bellied alewives." The scientific philologist will be delighted with the elaboration of every part of the etymology. It is evidently a labor of love with Dr. Scott and his helpers.

The etymology also has its encyclopædic side. The old etymologists have made all sorts of mistakes. A dictionary of etymology naturally is in part a history of vagaries, whims; it runs to anecdotes, to curiosities. And, as errors are infinite in number, it must be selective, and so disappointing to the lover of philological curiosities, who will look for his own favorites and not find them all. Under a^{10} there is quite a full narrative of the way Thomas à Becket came by his present name. The encyclopædist looks for more such. No dictionary has been so liberal in explanation of proper names. Every one seems to be admitted which has been used as a common name, or given rise to a literary adjective. "American" introduces "America," and "America" "Amerigo Vespucci." Here the cyclopædist critic wonders why nothing is said about the contention that "America" is a native word with the aborigines, and was not the name of Vespucci. Lowell talks of "Amphitryon's gold-juice humanized to wine." Here is Amphitryon all right: why not the story of the gold-juice? They are saving it up for the word *gold-juice*, perhaps. That is all right. Under *algebra* there is perhaps the fullest account in any dictionary of the origin of the word, with the minutest explanation of the meaning of the Arabic words from which it is derived, and how *algebra* meant *bone setting*, as well as handling mathematical symbols; but it would not be strange if some critic should find fault because there is no statement of De Morgan's contention that the name originally meant completing the square of an affected quadratic equation, the palmary surgical operation of the Arabic mathematicians of the time. The Philological Society's Dictionary has this advantage in its long columns of quotations, that if the editor does not think an opinion worth introducing into his etymological discussion, he can yet give a quotation which contains it, as Dr. Murray gives this one from De Morgan.

Next come the definitions. There are, in the first place, the definitions of common words, the most difficult and thankless task of the lexicographer. The attempt to give in general terms the connotation of familiar words which skip about day by day from object to object, on the hint of any sort of relation between the objects, is a desperate attempt in the English language. One needs Greek or German, with their free compounds, etymological thickets in whose entanglement one is easily fooled by verbal shadows. The definer is happy who prints nothing more stupid than Dr. Johnson's famous definition of *net*, "a texture woven with large interstices or meshes, used commonly as a snare for animals." There is one class of exceptions to this indefinableness, brief and clear definitions which have been long used in standard manual dictionaries like Johnson and Webster. These have become real meanings by having been authoritatively taught to many generations, even if they were not such at first. The definer of the 'Century Dictionary' does not copy these definitions very freely. He is afraid, perhaps, of infringing copyrights, or, perhaps, sometimes he thinks he can state them in better words. The practical relief from this difficulty of definition comes in two ways. One is the pictures. A single look at one of these engravings makes all plain when a column of words would fail. The other is quotations. For abstract terms there can be no pictures. If one is in doubt about their accurate use, he must have a body of quotations from standard authors in which they and their synonyms occur. Macaulay sends his Johnson to the binder for its fourteenth, or, perhaps, its twentieth cover. He studied the quotations by day and by night. The 'Century Dictionary' has much larger collections of quotations than other works of its kind, and acute and clear discussions of synonyms by Prof. Henry M. Whitney. Workers in English literature, who will accept this book with many thanks, will be sure to wish and hope that the same spirit which has prepared it may by and by give the world an encyclopædic dictionary of literature, in which the chief of our standard authors shall be thoroughly treated, as Homer is in a Homeric dictionary or Shakspere in the Shakspere dictionary, so that they can find every notable passage cited under its important words, and every difficult passage interpreted and explained. Such a work would have been a dream fifty years ago; but scholarship has grown apace in English language and literature, and a corps of American scholars competent for the work and eager for it might now be organized.

We reach at last the encyclopædic definitions, the great bulk of the book. These are the work of specialists in the various departments of science and art. These departments are spoken of as philology, law, biology and zoölogy, anatomy, botany, and other natural sciences, theology and ecclesiastical history, mythology, archæology, fine arts, history. From the nature of the case, as all the words and phrases of the English language are to be treated encyclopædically, the whole body of human thought is to be gone over. 200,000 words and 30,000 phrases will give several millions of definitions. Each of these has been proposed to a specialist as a topic upon which to present the best thought of the present day in the most brief and interesting form. The names of the contributors are a guarantee that the work is thoroughly done. That there are mistakes, shortcomings, neglected topics, is a matter of course. So also in a first section there must be expected occasional unnecessary repetitions and sometimes variations in different parts of articles contributed by different specialists. They will work together more perfectly as they go forward. Particular criticism is reserved. We close this paper with the general judgment that the work thus far meets all reasonable expectations, and when completed it will be the most comprehensive and satisfactory book of general reference yet produced—a book which every one will want, and which ought to have a place in every public library.

RECENT FOLK-LORE PUBLICATIONS.

Fairy and Folk Tales of the Irish Peasantry. Edited and selected by W. B. Yeats. [The Camelot Series.] Pp. xviii, 326. London: W. Scott; New York: T. Whittaker. 16mo. 1888.

Popular Tales from the Norse. By Sir George Webbe Dasent. 3d ed. Edinburgh: David Douglas; New York: G. P. Putnam's Sons. 1888. 8vo, pp. cli, 443.

Bits of Louisiana Folk-Lore. By Alcée Fortier. Baltimore. 1888. 8vo, pp. 69. [Extracted from the Transactions of the Modern Language Association of America, 1887, vol. iii.]

Folk-Lore Brésilien. Par F.-J. de Santa-Anna Nery. Paris: Perrin & Cie. 1889. 16mo, pp. xii, 272.

The Folk-Lore of Plants. By T. F. Thiselton Dyer. New York: D. Appleton & Co. 1889. 12mo, pp. 328.

The Tree of Mythology, its Growth and Fruitage: Genesis of the Nursery Tale, Saws of Folk-Lore, etc. A Study, by Charles De B. Mills. Syracuse, N. Y.: C. W. Bardeen. 1889. 8vo, pp. vi, 288.

THERE seems to be no lull in the interest taken in popular tales; collections, real and fictitious, follow each other fast, and no slight labor is needed to sift the contents and coördinate the fresh material. The new science of popular tales has already made its influence felt among collectors, but there is still much to be learned, and there is still among many a hazy idea of the word "popular" or "folk" tales. This is peculiarly true of the author of the first work on our list, who has made an entertaining compilation from earlier works (a small portion of it has not appeared before). The collectors of Irish tales have hitherto been littérateurs who were more concerned with the form of their stories than with their contents, thus divesting them of all scientific value, while at the same time largely increasing their interest for the ordinary reader. One need only compare a story like the "Three Wishes" (p. 235), by W. Carleton, with its sister versions in other languages (Crane's 'Italian Popular Tales,' lxv, "Godfather Misery," the French "Bonhomme Misère," etc.), to see what a racy local flavor has been imparted to the original theme. The volume before us deals chiefly with that delightful product of the Celtic mind, the fairy, although curdling ghost-stories are not neglected. Only eight of the stories in the book are of general interest—the "Three Wishes" mentioned above; the "Legend of Knockgrafton" (Crane xxvii, "The Two Humpbacks"); the "Three Wild Geese" (Crane xv, "Snow-white-fire-red"); the "Lazy Beauty and her Aunts" (Grimm No. 14, "The Three Spinners"); the "Haughty Princess" (Crane xxix, "The Crumb in the Beard"); "Munachar and Manachar" (Crane lxxviii, "Pitidda"); "Donald and his Neighbors" (Grimm No. 61, "The Little Farmer"), and the "Story of Conneda" (comp. Crane iv, "The Dancing Water, the Singing Apple, and the Speaking Bird"). These tales make us deeply regret that no Irish Grimm has yet garnered the wealth of popular tradition which in England and this country has shrunk to such meagre proportions.

In 'Popular Tales from the Norse' we have an old friend in a new dress worthy of his exceptional character. Two men have been born collectors of popular tales; they were Jacob Grimm and P. C. Asbjörnsen. The tales of the people, viewed through the medium of their own minds, assumed a lovely form without losing any of their own individuality. Asbjörnsen's collection, like Grimm's, has become a classic, and its scientific value is as high as its literary worth. Dasent's translation is worthy of the original, and cannot be too highly praised. The introduction, on the origin and diffusion of popular tales, is left as in the second edition, and the reader will find in it no hint of the interesting theory of Mr. Andrew Lang.

The vein that Mr. Harris opened to the public in his inimitable 'Uncle Remus' continues to be worked—with greater interest, we must confess, to the student of folk-lore than to the general reader. Mr. Harris knew, like Grimm and Asbjörnsen, how to impart a literary form to his stories without impairing their original worth. Of the ten stories given by Fortier, none are comparable in the telling to Mr. Harris's, though four correspond more or less to versions in 'Uncle Remus' (i, ii, iv, vi='Uncle Remus' ii, iv; xv, xx; xx, xxxiv; and vi). No. v is a version of the "Forty Thieves" (episode of the cave opening at the word *sesame*); No. vii is Jones's 'Negro Myths from the Georgia Coast' xxxviii; No. viii is like the story in Bleek's 'Reynard the Fox in South Africa,' page 16, and Jones's xli; No. ix is a version of the widespread story of "Dr. Knowall" (Grimm, No. 98); and No. x is the story of the transformation of a woman into a monkey. The most interesting of the series is the first, which is a version of the "Wonderful Tar-Baby Story" of "Uncle Remus," but one which proves conclusively the South African origin of it. In Prof. Fortier's version, there is a great drought in the land, and the animals dig a well to obtain water. Compair Lapin refuses to work, on the ground that rabbits do not drink water. He is forbidden to use the well, breaks the command, and evades detection until caught by the "Tar-Baby." Now, a version almost exactly similar is found in the *Folk-Lore Journal*, edited by the working committee of the South African Folk-Lore Society, volume i, page 69; the only difference being that the jackal takes the place of the rabbit and is caught by the tortoise, whose back is covered with a sticky substance from the bee-hive, and who is stationed in the well or pond just on the level of the water, so that the jackal steps on him and sticks fast. Prof. Fortier has added to his stories some interesting Proverbs, Sayings, and Songs. The texts are given in the original dialect, with translation and philological notes, the whole forming a very valuable contribution both to the Creole dialect and to American folk-lore.

Some years ago a writer in the *Nation* (February 23, 1871) called attention to the identity of an Amazonian story, "The Tortoise that outran the Deer," with one found among the negroes of South Carolina. Since then a number of animal stories from the Amazons have been published by the late Prof. Hartt ('Amazonian Tortoise Myths,' Rio de Janeiro, 1875), and Mr. Herbert Smith ('Brazil, the Amazons, and the Coast,' New York, 1879), eight of which are to be found in 'Uncle Remus.' Two explanations of this striking resemblance are possible—one, that the Indians on the Amazons obtained their stories from the African slaves of Brazil; the other, that both Indians and slaves originated them independently. Any collection of Brazilian folk-lore that will throw any light on this interesting question is most welcome. M. Nery has made a very readable little book out of the popular poetry, legends, and fables of Brazil, without, however, any pretension to scientific treatment. Comparatively little is new among the animal stories. The author has himself collected three tortoise myths; the others (nine in number) were gathered by Hartt, Roméro, and Smith. No. 3, "Le Jaboty et le Cerf," is Harris's "Mr. Rabbit finds his match at last"; No. 8 is Harris's "Mr. Rabbit grossly deceives Mr. Fox." The tar-baby story finds an echo in "Le singe et el Mannequin de Cire," where a wax image is put in a tree to keep the birds away from the oranges. The monkey takes the figure for a living being and asks for an orange. Just then the wind blows one down. Then the monkey asks for another, and, not receiving it, throws stones at the figure. The stones stick fast, and then the monkey climbs the tree and attacks the figure, with the result that both fall out of the tree and the monkey receives a good bruising.

In accordance with the most recent theory of mythology, we might define Folk-Lore as the views of primitive man in regard to the world by which he is surrounded. The various kingdoms of nature have all been the object of his simple study, and about them has gathered a mass of popular belief of vast extent and diversity. The animal kingdom has already been the subject of a systematic examination by Prof. De Gubernatis ('Zoölogical Mythology,' London, 1872, 2 vols.), who has also extended his researches into the mythology of the vegetable kingdom ('La Mythologie des Plantes,' Paris, 1878–82, 2 vols.). Limited portions of the latter field have also been treated by many others, notably by Mannhardt in Germany. These works, however, were either attempts to explain the origin of the beliefs by certain theories of mythology, or they were elaborate collections of materials. From none could a methodical view of the whole field be obtained unbiassed by the writer's hobby. For this reason Mr. Dyer's book is all the more welcome—a work as admirable in its conception as in its execution.

His object is to give a brief systematic summary of the various branches of the folk-lore of plants. This he does in twenty-three chapters, beginning with the notions of plant life, and ending with certain mystic plants (hellebore, mandrake, etc.). Between these two extremes may be found every phase of popular belief concerning plants, their virtues as medicine and love-charms, their names and language, their use in ceremonies and in proverbs, their relations to the weather and the calendar, their sacred character and worship—in short, all the forms of superstition which have clustered about the vegetable kingdom. Mr. Dyer has full control of his material, and illustrates each point sufficiently. His examples are drawn from all quarters of the globe, although naturally English plant-lore is most fully represented. The author is well acquainted with the literature of his subject, although he does not seem to know the work of De Gubernatis cited above. He wisely abstains from theories of the origin of plant-lore, and leaves the reader to explain it as he will by reference to solar mythology or survival of savagery. The result is a book delightful to the general reader, and not devoid of scientific value.

We have left ourselves but scant space to speak of Mr. Mills's book, evidently a work of love, on which great pains and care have been lavished. It is in the nature of a general treatise upon mythology, strictly from the standpoint of Müller, Cox, and De Gubernatis, whose exaggerated theories of the solar myth Mr. Mills accepts implicitly. He is, however, acquainted with Mr. Tylor's works, and at times has a glimpse of a theory more rational than that of Cox; yet it is but a glimpse, and the reader will infer that there can be but one explanation of mythology, namely, that based upon the ever-recurring change of night and day or the seasons. Although Mr. Mills's work makes no original contribution to the subject of mythology, and is somewhat rambling in its method, it contains much interesting information, and is likely to foster an inte-

rest in a subject worthy of study at all times, and just now rather fashionable.

The Constitutional History and Government of the United States: A Series of Lectures by Judson S. Landon, LL.D. Boston: Houghton, Mifflin & Co. 1889.

THE lectures of which this book consists were delivered before the senior classes of Union College during the four years in which the author was President *ad interim*. They aim rather at an expository and narrative treatment of well-established facts than at originality; indeed, the ground has been so thrashed over that the latter quality is hardly to be expected. Mr. Landon's style is clear and simple, and if at times slightly colloquial, this is perhaps explained by the fact that the book was not prepared as a treatise, but grew up out of more or less informal "conferences" with pupils. This may account, also, for a certain hastiness of statement which mars passages of the work here and there. To say of Washington that he was "not an educated man" may, in a certain sense, be true, but it is at least misleading unless accompanied by a good deal more explanation than we get. "Not an educated man" is, among educated men, a term of severe criticism. We might apply it without hesitation to the late John Kelly or even to the late Andrew Johnson; but when we hear the seniors of Union College informed curtly that Washington was not an educated man, we receive a shock of that sort of surprise which produces laughter. We feel inclined to beg at least for a suspension of sentence until we know exactly what an educated man would have been towards the close of the last century—in the estimation of the author. So it is rather a hasty way of writing in a treatise of this kind to say of Franklin that, "could he have been the companion of Solomon, Aristotle, and Bacon, he would have analyzed their wisdom and philosophy—universal expert as he was—and given them such suggestions as would have made them his debtors." No doubt he would, and no doubt he was able to do so without being their companion at all; but this is certainly not a felicitous way of impressing upon us either the wisdom of Franklin or the judicial nicety of the author.

A publicist runs considerable risks when he stereotypes the flowing and familiar discourse of a lecturer to college students into a constitutional treatise. But we find other evidences of the author's haste. He has a theory of the constitutional development of the United States which he seems to think is so generally adopted, or so necessarily true, that it may be laid down without proof, or even against the evidence. This is, that in the period between the inauguration of Jefferson and the outbreak of the rebellion, the growing strength of the national Government, which burst upon the world like a revelation in 1861, was the work of the Supreme Court. His opinion appears to be that, during this interregnum, the executive and legislative parts of the Government went to sleep, while the Supreme Court went on consolidating, unifying, and strengthening the Government. That we may do him no injustice, we quote:

"I shall show hereafter that the Supreme Court of the United States grew to be great, but every other department failed to develop into anything like a dominant and controlling factor in the nation's life. The Constitution was so construed in times of peace as to stand constantly in the way of everything except the merely routine work. Great struggles and great debates there were in Congress, but as a general rule the do-nothing policy, both at home and abroad, prevailed. Whenever any question arose between the nation and the States, the States usually had their power and jurisdiction conceded, except indeed when the question was brought into the Supreme Court" (p. 133).

This theory flies in the face of the historical record which the author gives immediately after stating it. Neither the *laissez-faire* theories of the Jeffersonian school, nor the State-rights theories of politicians of the later Southern school, interfered with the steady growth of nationalism in Congress or the executive, any more than it did in the judicial branch. Jefferson himself purchased Louisiana, while doubting the constitutionality of the act, thus giving the first impetus to the enormous territorial expansion which is partly the key to the subsequent development of national strength; the war of 1812, if it did not seem at the time to redound very much to the national glory, established the position of the country as a naval power; the Hartford Convention ended in smoke; the Monroe Doctrine made its appearance; Protection consolidated the great manufacturing interests of the country behind the national bulwark of the tariff; Andrew Jackson baffled the schemes of the nullifiers; Texas was appropriated, the Mexican war waged; and, finally, through all this period the slaveholders, while preaching State rights, were at the same time, like shrewd politicians, consolidating the national powers in their own interest. The period was not one of what the author calls "Jeffersonian doze," but of great activity in every department; and this, when the crisis came, showed itself at once in the immense rising against the South's pretensions. No doubt it seemed at the time that the party of State rights were making great headway; but in any retrospect now it is impossible not to see that the original Confederacy was all the time being consolidated into a powerful state, with all its pride, conscious vitality, and aspirations for greatness. Exactly what part the Supreme Court played in all this, we would not undertake to say, but it is remarkably unsafe to insist that it was by the decrees of a judicial tribunal, however great, that such a consummation was brought about.

In the last chapter, the author discusses a question raised by Mr. Bryce's recent treatise—how it is that our system seems less and less fertile in great public men. He agrees with Mr. Bryce that the fact is so; that while, in the leading western European nations, government is carried on by a class of men who represent the best ability, character, and education which the state produces, in the United States men of this type are for the most part not found in politics. Does this show a danger to the system, or not? The author takes the optimistic view that, our Government being one of law constitutionally expounded by judges, we can get along with second-rate politicians when another country could not. To this the reply would be that it is not a question of getting along, but whether the character of our politicians does not imply a decadence in government which must show itself in their work. To our minds, it is an axiom that second-rate men must produce second-rate work; and to say that we get along very well on the whole with politics in their present condition, is rather a proof that we flourish in spite of this feature of our Government, and that, if we could command a higher order of political ability, we should flourish infinitely more. You cannot get figs from thistles, and when you admit that a system does not produce statesmen, you admit that in so far it is diseased. Examine into the causes, and a cure may be found; but to say that we need no cure, or that there are some other things in some other country just as bad (a favorite mode of meeting difficulties of this sort), may do very well for the stump, but not for sober discussion.

The narrative portion of the work is well, if not always accurately done, and the chapters on the Supreme Court give a compendious account of its more important decisions.

A Concise Vocabulary to the First Six Books of Homer's Iliad. By Thomas D. Seymour. Boston: Ginn & Co. 1889.

THERE are men who are old enough to remember when the chief apparatus of the schoolboy consisted of the grammar and the dictionary. In rare instances "Lempriere" was added to the outfit; but that was all. Now, when a young fellow leaves school for college, he has made a large collection of text-books—first books, second books, third books, grammars of several degrees of strength, exercises proportioned to every stage of development, helps to this, aids to that, introductions to the other. There is no use in quarrelling with this state of things. It is a manifestation of a general system of subdivision such as we find in the modern method of gymnastic training. The old plan of dictionary and grammar is gone with the old plan of dog and gun, and the only thing we have to see to is that the apparatus is good and cheap.

The last piece of classical apparatus we have seen has the warrant of its goodness in its maker's name. Prof. Seymour knows his Homer, and his 'Concise Vocabulary to the First Six Books of Homer' may be trusted. The special interest, however, of the little book lies in the very strong indication which it gives of a need that has arisen out of the advanced scholarship of the day. In the old days of dictionary and grammar, boys used to read more of Homer than they have done since the appearance of Anthon's edition. It is a melancholy fact that the fewest young college men—even of those who are especially addicted to Greek—have read Iliad and Odyssey from A to Ω. They have so much to do with the dialect, the versification, and the Homeric Question that they have not had the time to read Homer in those long stretches that are needful for any true enjoyment of the great poems. To meet this want, Homer readings have been instituted—some of them eminently successful—in which gifted professors translate Homer to admiring circles. But this is not sailing on the ocean of the epic in any true sense. At best one is a passenger, not a mariner, and men must read for themselves, not be read to—must hold the tiller and handle the ropes, if they are to understand the true zest of the voyage.

Now, the difficulty is the vocabulary—a difficulty of the imagination, it is said; but seasickness is a trouble of the imagination, and no less real on that account. It is well enough to say that any student who will resolutely go to work will find the trouble of the vocabulary disappearing. Many words, at first strange, are repeated so often that they become familiar after a short time, and the hardest words being still crosses, still *x*'s to the etymologists, may be counted out; so that between the recurring words and the inexplicable words the student finds that he is making rapid progress, and can read first one, then two, then three books at a sitting. But resolute students, like resolute seamen and resolute swimmers, are not common, and the pedagogic mind of to-day says, "Abandon the moral question and make the thing as easy as possible. Turning over the leaves of a dictionary is a nuisance without

any corresponding advantage. Let us make the work as light as may be, knowing that if the boy has once read his first six books of the 'Iliad,' he will find the other eighteen comparatively easy work."

To this good end the 'Concise Vocabulary' has been devised, and with the aid of such a compact manual it is supposed that the learner will have little trouble in getting at the sense, or what Prof. Seymour takes to be the sense, of the words in their connection. Prof. Seymour's understanding of the first six books of the 'Iliad' is as good a sense as boys are entitled to, and they are saved the trouble of picking out the proper meaning from the tangled mass of the larger lexicon, or even the Homeric Dictionary. But if we are to make this part of the work so much easier, why not follow a plan which has been tried in Germany—that of putting the vocabulary in the order of the verses, as Scheindler has recently done? To be sure, this is perilously like an interlinear translation; but an interlinear translation is not a bad thing, if there is no repetition, and if the student is steadily referred to the place in which the words first occur. Indeed, among many methods of mastering the vocabulary of a language, few are practically better than this; and if the teacher punishes the student, or the student punishes himself, for forgetfulness by assigning as a task the committing to memory of the verses in which the forgotten words occur, the attention will be much quickened. That Prof. Seymour's plan has some advantages we are not disposed to deny. Still, as has been suggested above, it is open to the objection that all ready made learning has, and the intellectual fibre will not be so tough as it became in the old way. Some day the student must pass from the 'Concise Vocabulary' to the special dictionary, perhaps even to the great 'Lexicon Homericum,' and the disillusionment that is sure to follow will perhaps make him abandon his Homeric studies in disgust.

The Annual Statistician for 1889. San Francisco: L. P. McCarty.

MUCH industry is evidently employed in collecting and compiling information for this work, but so long as it is not edited with more intelligence than has hitherto been expended upon it, it can never become the standard reference annual which its publisher evidently thinks it already is. If an American statistical publication cannot be depended upon to state correctly the number of Representatives in the Congress of the United States, it is not easy to imagine in what respects it can be relied upon. Yet on page 119 it is said that the total number of the Representatives in the Fifty-first Congress is 334, of whom 172 are Republicans and 162 are Democrats. The list of Representatives published on pages 118 and 119 contains only 325, the correct number, of whom 166, including the Representatives from the Third and Fourth West Virginia Districts (in which districts certificates have recently been issued to the Democratic candidates) are designated as Republicans, and 159 as Democrats. How the number 334 was obtained we do not know. Even if the eight Territorial delegates were added to the true number of Representatives, the total would be only 333.

In his advertisement the publisher of the 'Statistician' claims that in no other similar publication has the information been corrected down to so late a date as was that which it contains. On page 33 appears the act of 1792 designating what officers shall act as President in the event of the death, resignation, or inability of both the President and Vice-President, and fixing the day for the meeting of the electoral colleges. A footnote directs the reader to the index for a reference to the act of 1886, which substitutes the Secretary of State, and after him the other Cabinet ministers in order, in place of the President of the Senate, and after him the Speaker of the House, as the officer to discharge the duties of the President in the event of the death, resignation, or inability of both President and Vice-President. But there is no hint that the remaining portion of the old act of 1792 has been in great part repealed, and that the electoral colleges now meet in January and not as formerly in December.

Most well-informed persons know that in the United States generally the law places fewer obstacles in the way of early marriages than it does in almost any European country. The table on page 307 which purports to give the "marriage age" in different countries, states that in the United States it is 21 for males and 18 for females, while, according to the same table, in Spain, Greece, Portugal, and Switzerland, and among the Catholic population of Hungary, it is 14 for males and 12 for females, in Austria 14 for both sexes, in Germany 18 for males and 14 for females, in Belgium and France and among the Protestant population of Hungary it is 18 for males and 15 for females, and in Russia and Saxony it is 18 for males and 16 for females. The editor of such a book as the 'Statistician' professes to be, ought to know in the first place that there is no such thing as "marriage age" for the United States as a whole, and that the age at which marriage may be lawfully contracted is a matter prescribed by State law, and that the laws of the different States name different ages; and secondly, that the ages he gives for the various countries of Europe are in most and probably in all cases the minimum ages at which minors may marry with the consent of their parents or guardians, while the age given for the United States is probably about the maximum required by any State for the issue of licenses to persons who have not the consent of their parents or guardians. Where the parents or guardians consent, or where they do not consent and the marriage is actually celebrated, whether without a license or with a license issued inadvertently or procured by fraud, the marriage will in many States be valid if the parties have attained the age required by the common law—namely, 14 for males and 12 for females.

Mistakes will happen in the most carefully edited of books as in the best regulated of families, but there are pardonable and unpardonable blunders. The errors we have referred to above are cited not as being by any means all we have noticed in a far from exhaustive examination of the book, but as strongly marked specimens of the kind of misstatements which would have surely been detected and corrected had the manuscript or the proof-sheets been subjected to careful and intelligent revision.

BOOKS OF THE WEEK.

Alexander, S. Moral Order and Progress: An Analysis of Ethical Conceptions. London: Trübner & Co.
Archer, T. A. The Crusade of Richard I. 1189–92. G. P. Putnam's Sons. $1.25.
Balg, G. H. A Comparative Glossary of the Gothic Language, with Especial Reference to English and German. Part VII. B. Westermann & Co.
Barham, R. H. The Ingoldsby Legends: or, Mirth and Marvels. Frederick Warne & Co. 75 cents.
De Quincey, T. Murder Considered as one of the Fine Arts. Three Memorable Murders. The Spanish Nun. G. P. Putnam's Sons. $1.
Fiske, J. The War of Independence. Boston: Houghton, Mifflin & Co. 75 cents.
Goddard, F. B. The Art of Selling; also, Good Buying. Franklin Publishing Co.
Gray, M. The Reproach of Annesley. Chicago: Rand, McNally & Co.

The Nation.

NEW YORK, THURSDAY, JUNE 6, 1889.

The Week.

Our readers will remember that we have dwelt somewhat upon the Norwich, Conn., Post-office case as being one of the most flagrant of the instances in which the President has violated his civil-service-reform pledges. On Monday an election was held in Norwich, and for the first time in its history the Democrats elected their entire municipal ticket, with the single exception of a candidate for Sheriff. The Republicans were completely routed, losing control of the City Council, though they had a number of hold-over members and only needed to elect one to maintain a majority. How much effect the Post-office change may have had in bringing about this result we do not know, but it is perfectly obvious that whatever other effect it had, it did not help the Republicans. If the President's distribution of spoils in other parts of the country is working as it has done in Norwich, the sooner he checks the Wanamaker-Clarkson guillotine in the Post-office Department, the better it will be for his party.

Mr. Roosevelt's plea for more money and larger powers for the Civil-Service Commission ought to be heeded by the next Congress. Whether it will be, is very doubtful. It has always been the delight of Congress to hamper the Commission as much as possible by giving it a very inadequate appropriation, and there are no encouraging signs of a change of disposition in this respect. The Administration is stirring itself with commendable promptness in regard to the needs of the New York Post-office, and a commission has been appointed to make inquiry as to those needs and the increase in appropriation necessary to meet them. In all probability the commission will recommend a large increase and Congress will grant it. The necessity for it has been growing steadily for the past eight years, but it has not been granted because there was at the head of the Post-office a civil-service reformer devoted absolutely to the public interest, and not at all to "politics." Now that his place has been filled with a "practical politician," the appropriation is forthcoming. Will the Administration take as much interest in the needs of the Civil-Service Commission as set forth by Mr. Roosevelt?

It is to be expected that the worsted-manufacturers, in anticipation of suits in court, will now begin to try to work a change in the trade name of *worsted* cloths, coatings, and suitings, and announce them as "*woollen* cloths," etc., but it is too late. What did the Congress sitting in 1883 intend, and what were the trade names in that year? Those to whom Congress spoke in the tariff of 1883 were, and are, the importers of and wholesale dealers in the imported coatings and suitings, not merely the dealers in the home-made article, which is never imported and never taxed. If Secretary Windom, or the draughtsman of his recent opinion, had taken up any commercial newspaper and glanced at articles on the dry-goods trade, or at auction sales, or at the advertisements of the coatings and suitings submitted to his inspection, he would have seen what name the wholesale trade now gives to them. In the New York *Commercial Bulletin* are such phrases as these: "Agents continued to make fair deliveries of heavy *worsted* suitings and trouserings"; "in *woollens* and *worsteds* few orders were placed." One house announces for sale the products of the "Wansback *Worsted* Mill" and the "Auburn *Woollen* Company." The Manchester Mills call attention to "*worsted* dress goods." John F. Plummer & Co. proclaim "*Worsteds*—fancies and coatings." Auctioneers say they will sell on a day mentioned "clothing, woollens and worsteds." Everywhere is the distinction made between "woollen cloths" and "worsted cloths." In order to prevent a manipulation of trade-names by importers, manufacturers, appraising officers, collecting officers, or Treasury officers, the courts confine the testimony respecting importing nomenclature to the date of the law under discussion. Harrison's victory over Cleveland cannot wipe out worsted or make worsted woollen, any more than it can make steel iron.

In a paragraph a fortnight ago, referring to a report from Consul Grinnell of Bradford, England, concerning the exportation of "broken wool tops" from that place to the United States, we spoke of this article as wool tops merely, which are different from broken tops in both the commercial and the legal sense. A woollen manufacturer sends us a description of tops, broken tops, slubbing, waste, and noils, all being products of wool. Tops are dutiable at sixty cents per pound and waste at ten cents per pound. Broken tops are the damaged parts of combed wool. They can be put through the combing process a second time, and made useful for nearly all purposes, or they can be treated as waste. If treated as waste, they are dutiable under our tariff at ten cents per pound. They can be made to resemble waste by mixing a small amount of genuine waste, commonly termed Botany waste, with it. Now, the point is, that under our beautiful tariff, which makes a difference of fifty cents per pound between two articles of nearly equal value, a large premium is offered to the Bradford combers for the manufacture of "waste" for the American market. Good wool is turned into "broken tops," and then a sufficient amount of Botany waste is mixed with it to make the whole of it waste. This is imported at a duty of ten cents per pound, to the supposed detriment and damnification of our wool-growers, and is converted into worsted goods by American manufacturers. The operation is akin to that which was exposed some years ago, when metal statuary was admitted at a lower rate of duty than the metal of which it was composed, the result being a remarkable importation of leaden Mercuries, Venuses, and Minervas, which were, immediately after passing the Custom-house, converted into pig-lead and plumbing materials. Millions of pounds of wool are converted into broken tops and then into waste for our market. Originally, says Consul Grinnell, "the tops were broken up by hand, but the enormous development of the shipments to the United States has caused, it is stated, machinery to be used for the purpose. The wool-combers, as a rule, will not lend themselves to the practice, but deliver the tops to the waste-dealers in the regular form, and the latter either break them or cause them to be broken up. The temptation to 'prepare' genuine tops here for entry into the United States as waste at ten cents per pound is very great, as may be judged when I mention that one of the larger firms in Bradford, of unquestionable reputation, informed me that they had been offered four cents per pound profit over their regular price for all the Botany waste they could supply."

Block Island's reputation as a summer resort has brought it into national prominence during the past ten or fifteen years, and it is visited each year now by people from all parts of the country. Few of these visitors see in the little neighborhood of 1,500 or 2,000 inhabitants anything more than a plain seafaring and fishing community, of primitive tastes and rather barren lives. Twenty years ago, in fact, the inhabitants of the island were remarkably primitive both in habits and knowledge. They went to church barefooted in the summer, and knew little of the outside world. The rapid development of their island into a summer resort has done much to introduce to them both the benefits and the abuses of civilization, but the influence which has been most revolutionary and harmful has been that of politics. This has not come from a portion of the outside world more remote than the mainland of the State of Rhode Island, to which their island belongs. The annual necessity of carrying Rhode Island in order to have the "moral effect" for the cause of protection in the land, has, as is notorious now, converted the entire State into more or less of a rotten borough; and from evidence which is now being taken in a contested-election case on Block Island, this primitive fishing community has had its morals debauched in the most wholesale manner.

At the last election on the island, the Republican legislative candidates were de-

clared victorious over their Democratic competitors. There is a total vote of about 300 on the island, and the Democrats usually have a majority of from fifty to eighty. A few years ago the Republicans discovered that, by the quiet investment of a few hundred dollars, they could surprise the enemy and carry Block Island. This led to counter-bidding by the Democrats, until practically the entire voting population has been educated to look upon election day as even a larger source of income than the "fees" from the summer-hotel guests, many of them getting for their votes more money than they had been able to earn for an entire year. At the legislative hearing which is now in progress, the Democratic contestant has introduced fifteen affidavits showing that Republican candidates and agents offered in cash from $25 to $50 for votes, and promised to pay, in return for votes, the yearly house-rents, to give steady employment for a year, to pay off mortgages, and to defray the expenses of pending lawsuits. Names and circumstances of the bribery are given in all cases, and the bartering appears to have been carried on in the most open manner.

Here are some of the statements of the affidavits as they are published in the Providence *Journal:*

"William K. Gorton deposed that he was approached by Sam Cook, registered as Warren Cook, who told him he was foolish if he did not vote the Republican ticket, as he didn't think he would have any trouble in getting $25 or $50. Subsequently Sam went to Gorton's house and said: 'You are not going back on our party, for if you will vote for us I will see that you get $50 or $60 and a job for the year.' William Hull told him that he thought he could get $50, and some $25. Nathaniel L. Sprague was approached by Frank Littlefield on election day, who offered to give him $45 for his vote. He saw Frank Littlefield give Amos Griffin $45, telling him to vote for him. Littlefield told deponent that his father would give him a year's house-rent if he would vote for him. Lorenzo Littlefield offered him $50 and house-rent for a year at Richard Dodge's place. Charley Mulls swore that he heard Lorenzo Littlefield offer Julius Smith first $50, and on refusal $50 more, if he would vote for Littlefield and Sheffield, and he saw Lorenzo pay Smith two $50 bills. One of the Sheffields went over to the Town Hall with him. Littlefield offered Manuel Allen $50 to vote for him, and paid him in the witness's presence."

The counter affidavits have not yet been presented, but they are said to number 200, and to show that the Democrats offered from $25 to $40 for votes, which was generally refused. It is estimated that the election cost the Republicans about $4,500 and the Democrats about $3,000. Nearly the entire voting population was bought to vote either in one way or the other.

There has been a rumor that Justice Miller of the Supreme Court was about to retire on a pension because of ill-health, but it is authoritatively denied. The country will be pleased to know that there is a good prospect of this able jurist's being able to render some years of faithful service yet, although he has entered upon his seventy-fourth year, and has been eligible to a pension for three years. Justice Miller is the senior member of the Supreme Bench in length of service, having been appointed by Lincoln in 1862, although Justice Bradley, who was appointed by Grant in 1870, is three years older. Justice Field, who was appointed by Lincoln in 1863, was born a few months later in the same year with Justice Miller. Three of the eight judges now serving on this bench are therefore past the age at which they might withdraw, and draw the same salary as hitherto for the remainder of their lives.

Judges as a rule are loath to give up work, even when a pension system offers temptations to a life of retirement. Justice Strong of the Supreme Court is the only man who availed himself of the privilege as soon as he had finished the requisite ten years of service in 1880, his age being then seventy-two. Justice Swayne held on until he was seventy-six. Chief-Justice Waite had the chance to retire more than a year before his death, but there is every reason to suppose that he would not have improved it for many years if he had lived. Doubtless there is an unconfessed hope on the part of many judges that they may rival the record of Justice Duval, who resigned in 1836, after a service of a quarter of a century, at the age of eighty-four, only on account of deafness, and of Chief-Justice Taney, who served twenty-eight years, and was in his eighty-eighth year when removed from the bench by death in 1864.

No child studies the geography of the United States without being struck by the apparent greed of Florida in having deprived Alabama of her just rights in the matter of a coast-line. Only about a quarter of Alabama's breadth is permitted to reach the Gulf of Mexico, and several counties which seem properly to belong to that State owe allegiance to Florida, Pensacola being the chief port and town in this corner of Florida. Alabama has always insisted that she ought to have this territory, and it looks as though the inhabitants would approve the change. At any rate, the two leading newspapers of Pensacola are openly advocating the annexation project. Eastern Florida naturally resents the idea. "It is painful," says the Jacksonville *Times-Union*, "to see Floridians utterly reckless of State pride, and we should be grieved to surrender our interest in west Florida." At the same time it admits that "if a majority of her people are willing to be sold, of course further objection would be useless," although it declares its own belief that not one in ten would vote for annexation.

The wiser Southerners perceive and confess that the only hope for the future of the negro is in education, although there are some who find it hard to realize this. The Statesville (N. C.) *Landmark*, for example, recently declared that the smattering of education which the negroes have received is exactly what makes the race question one of difficulty; while the Charlotte *Chronicle* affirmed that the negro has shown no improvement from his education since becoming a freeman. The Asheville *Citizen*, however, takes issue sharply with these views. While admitting that perhaps as a producer the negro is not what he was as a slave, it holds that this is not due to what little education he has gained since the war, but to the complete change in the system of labor and the general demoralization following the sudden emancipation of a densely ignorant race; and it believes that education will bring them back to and beyond their productiveness as slaves. Moreover, it finds already a noticeable improvement among them in appearance, in manners, in conversation, in morals; while the aggressive impertinence or sullen insubordination which characterized the race just after the war, is giving way to self-respecting courtesy, and in many instances to the dignity of freemen. Although the privilege of learning undoubtedly had some effect in making them contemptuous of the class of work to which they must look, they are rapidly learning that industrial proficiency is the better part of education. That these views of the *Citizen* are shared by the most intelligent Southerners, is proved by the fact that the General Assembly of the Southern Presbyterian Church accepts the declaration of the Northern Assembly that education is the true solution of the race problem, and has agreed to coöperate in the work.

It seems that the ground plan has been laid for an international Salt Trust composed of the English Salt Union and the leading American producers. Certain representatives of the latter have just returned from England, and they announce that they have arranged to "control the imported salt" as well as to make salt here. The reason assigned for this combination is, that "the salt industry is almost crippled by the wholesale dumping of English salt in New York and other Eastern ports, and by the rivalry between small manufacturers and dealers, who have been actively cutting each other's throats by low prices without doing any good to themselves or the consumer." All of which means that the public are to be deprived of the benefit of competition in the procurement of another article of prime necessity, and subjected to the tender mercies of a monopoly. Of course all the talk about the crippling of the salt industry in this country by the "dumping" of English salt on our market is a lie, the duty on salt in bulk being upwards of 79 per cent. ad valorem. The whole mess of complicated falsehood was exposed by Representative Whiting of Michigan in the last Congress. Mr. Whiting is himself a salt-manufacturer. He said that there was no need of any tariff on salt, and he voted to put it on the free list. We shall watch with lively interest the movements of this new craft flying the black flag.

The vagaries of protectionism in France are full of interest. The French butchers have borrowed an idea from the noble guild

on our side of the water. Although foreign meat is taxed a little more than one cent per pound, it comes in from Germany and Belgium in refrigerator cars in large quantities. So the French butchers have asked the Government to require the inspection of the meat, under the sanitary laws, to take place at the boundary. Heretofore it has taken place at the gates of the cities where it is to be consumed. At the boundaries the facilities for inspection and the force employed are small. There will be delay and expense, and possibly the meat may become stale and fly-blown by taking it out of the cool and dark chambers in which it is carried and then putting it back. At all events the butchers were allowed to have their way. The Chambers voted by 318 to 184 in favor of "urgency" for the consideration of the measure. It is said that contracts have been made for the carcasses of 250,000 sheep from Germany to be supplied to Paris during the exhibition, and that the urgency of the matter is to prevent the visitors from getting this mutton.

Another demand for protection—this time the city against the country, not domestic labor against foreign—has been made by the Paris washerwomen against the "pauper labor" of the suburbs. "They allege," says the Paris correspondent of the London *Economist*, "that, labor and rent being cheaper in the suburbs, a tax is necessary to enable them to compete with the suburban laundresses." The same writer continues:

"The most extravagant pretension is, however, that put forward by the directors of theatres and proprietors of cafés and restaurants in Paris, who ask the Government to close the exhibition at least three nights a week, in order to constrain the public and visitors to pass the evenings in their establishments. The demand was so preposterous that one is surprised to read that the Ministers gravely discussed it in a Cabinet council, and instead of boldly replying to a deputation that the request was absurd and unreasonable, evaded a refusal by explaining that the Direction of the Exhibition would be exposing itself to claims for damages, as a condition of the letting of space in the building and grounds for places of public entertainment was that the grounds should remain open during the evening. The petitioners were thus left under the impression that the Government might have acceded to their demand had it been able."

Bastiat's petition of the candle-makers that all people be required by law to close their shutters and keep out the sunlight in order to make business for dealers in tallow and oil, candlesticks and snuffers, will be the next thing on the carpet.

The French Government is much concerned at the increase in French emigration to South America, particularly to the Argentine Republic. No less than 17,105 Frenchmen sailed for that country in 1888, as against only about 5,000 in 1886. This is peculiarly trying to the Ministry in view of the comparative failure of the efforts to induce colonists to go to Algeria and Cochin China. The Minister of the Interior, M. Constans, directed a circular letter to all the prefects of France on April 18, urging them to put intending emigrants on their guard against the illusory promises held out to them by the agents of foreign countries. He speaks with considerable justice of the dubious prospect necessarily before the larger part of the emigrants to the Argentine Republic, destined to be set down in the midst of the vast uncultivated areas of the interior, under obligation to the Argentine Government or to emigration companies for their passage money, exposed to the probability of a fall in the price of labor and to the uncertainties of a fluctuating paper currency, and with no chance of becoming owners of land except as metayers. The prefects are ordered to press these facts upon the attention of the people generally, as also to proceed with the greatest severity against emigration agents who are not duly authorized. They are also to enlist the help of village authorities in the attempt to diminish emigration, getting the latter to discourage to the utmost intending emigrants who apply for the necessary passports and papers. It will be interesting to observe the effect of these vigorous measures; it does not seem possible that they can fail of accomplishing much of their aim.

It is not at all probable that the Government of France intends to burn its fingers by meddling with the affairs of Hayti. Any reader of Spencer St. John's 'Black Republic,' or any recent visitor to the island, or anybody acquainted with the social condition of those West India Islands in which the blacks are the largely preponderating mass of the population, knows that the task of bringing order and civilization into that community would prove herculean. Every such person knows also that a commercial treaty embodying special privileges to one country could not be enforced unless the country having the treaty should land a force there and administer the custom-houses—in short, take possession of the island. This would be like grasping a wasps'-nest or laying claim to a smallpox hospital. No civilized country could afford to expend its energies in such an endeavor. France sacrificed millions of treasure and tens of thousands of lives to hold Hayti, and failed in the end. She is as little likely now to put her hand on her ancient colony as she would be to seize a red-hot poker. The lessons of the past and the present are equally instructive to us. We had better take all the Antilles to our bosom and fireside than to take Hayti alone. If we could see reasons moving us to annex the whole lot, and if no obstacle interfered with the purpose, it would still be a sufficient objection that we should have to provide for the government and civilization of Hayti.

Through cable despatches to Cuban newspapers we get our earliest detailed accounts of the recent crisis in the Spanish Ministry. It was only the breaking out of an opposition to Sagasta within his own party, or rather the fusion of parties owning his leadership, which has long been threatened. The immediate cause of the rupture was the defeat of the proposition to increase the duties on cereals. At the time of voting on the bill, May 23, a great disturbance took place in the Chamber, the President, Martos, actually leaving the chair to vote against his party, while Gamazo and his little band of protectionist Liberals, seeing that the measure was destined to defeat, refrained from voting altogether. To these disaffected Liberals, it was publicly understood that Gens. Cassola and Dominguez, with Romero Robledo, had joined themselves, and that they could muster about fifty votes against the Government. They proposed to join the Conservatives in demanding a vote on the Administration bill to grant universal suffrage before discussing the estimates, and counted on ousting Sagasta on that issue. The situation was so critical that the resignation of the Ministry was generally looked for. Sagasta, however, chose to stave things off for a month at least, and secured the Queen Regent's assent to a decree suspending the sessions of the Cortes. It is expected that that body will be assembled again early in July, and it will then appear whether Sagasta has been able to make combinations assuring the continuance of his Administration. The outlook for him is certainly most stormy.

Longevity extraordinary can certainly be claimed for the inhabitants of Chili, if the Chilian census of 1885 is to be believed. From the statistics there presented it would appear that nearly 500 persons, out of a total of 2,500,000, are upwards of a hundred years old. This proportion is perhaps not too great, but the astonishing ages recorded put a strain on the strongest credulity. One man coolly returned his age as 150, and this would make it very probable that he is, as the editor of the census remarks, the oldest man in the world. Next after him comes a woman aged 138; two women and one man report themselves as 135; 132, 130, and 127 each have a representative, while there are seven 125 years old. Below that age the numbers mount rapidly, showing twenty-eight persons of the age of 120, twenty-seven aged 115, and no less than ninety-one aged 110. Of course, this is all deliciously absurd. The returns carry their own discrediting on their face, with their marked preference for the decades and half-decades—twenty-eight, for example, set down at 120, while but two are given to 119, and only one to 117; ninety-one put at 110, while but eleven reach 109. If this does not mean a fuddled memory vaguely feeling after a big figure best capable of expressing a belief that one must be very old not to remember things more clearly, then the indications are misleading. Our own census bears witness to the untrustworthiness of the testimony of the ignorant as to their age; but 2 out of 100,000 white persons giving their ages as above 100, while 45 out of 100,000 colored persons claim that distinction. The surprising thing is not to find Chilian Indians making themselves rivals of Thomas Parr, but to find Chilian census officers gravely accepting the impossible figures.

AMENDING THE TARIFF.

To make an interesting subject for popular instruction out of the Treasury decision on worsteds and woollens is no easy task. It seems to be a duty, however, to make the attempt. There is a purpose, we think, in the councils of the tariff oligarchy to rely hereafter upon Treasury decisions, rather than acts of Congress, for such amendments of the law as time and the progress of invention make necessary for their purposes. The reason why they should seek "relief" in that quarter, rather than in Congress, is that a tariff bill is a very risky thing. Whatever it may happen to be in the beginning, there is no knowing what it will be in the end. There are so many people to be consulted, there are so many conflicting and varying interests to grapple with, there are so many dark corners and dark lanterns, so many tangled bushes and gopher-holes to throw people down unexpectedly, that he must be a bold man who will take his chances on a new tariff if there is any other way to get what he wants. Moreover, the protected Trusts, which now constitute the largest force in the tariff oligarchy, are opposed to any measure which will bring them under discussion. What they want is security and silence. Any bill to change the tariff, even so simple a one as to abolish the distinction between woollens and worsteds, would necessarily be open to amendment. Anybody might move to put sugar, or copper, or white lead, or cotton bagging, or binding-twine on the free list. Perhaps some of these amendments would hold and be carried through. At all events, they would lead to discussion, and that is distinctly not wanted. If there is any way to change the tariff from time to time in particular places—to cut a hole in the shoe when it pinches too hard as the foot grows—that is much the safest procedure.

Now, in order to understand the worsted decision, the following things must be kept in mind:

(1.) That the law makes a distinction between woollens and worsteds, the same as it does between wool and hair or between iron and steel.

(2.) That it makes a distinction between "enumerated articles" and "non-enumerated articles."

(3.) That the phrase "enumerated articles" has been judicially determined to imply a designation sufficient to distinguish the articles in question from other articles, and that it is not necessary that they should be specifically mentioned. Thus, for instance, it has been held, and it is the law to-day, that the words "manufactures of which steel is a component part" are sufficient to put *all* such manufactures into the list of "enumerated articles," and that it is not necessary for this purpose to say steel rails, steel blooms, steel wire, etc. The case which establishes this principle is that of Arthur vs. Butterfield, decided by the Supreme Court on August 19, 1888.

Now, let us test the worsted decision by these principles. The Tariff Act of 1883 says that "*all* manufactures of *every description* composed wholly or in part of worsted, the hair of the alpaca, goat, or other animals, except such as are composed in part of wool, not specially enumerated or provided for in this act," shall pay a certain rate of duty. The Treasury decision lifts out of this category and this section of the law certain manufactures of worsted, namely, coatings and suitings, and puts them into another section where the duty is higher. Under the Supreme Court's decision referred to, these are "enumerated articles," just as much as if the law had said "flannels, blankets, *coatings, suitings,* and all manufactures of worsted."

If these coatings and suitings were made wholly of goat's hair or cow's hair—material that never saw a sheep's back—the reasoning employed would require that they should be lifted and transferred from one section and schedule into another, because the law couples worsted and hair in the same designation. And as if this were not sufficient to make the meaning plain, it says that if *wool* enters into the composition of the article, in however minute a degree, it shall go into another schedule. Here we have a clear perception on the part of the law that there is a difference between woollen goods on the one side and worsted and hair goods on the other. As a matter of chemistry there is no difference between the three things. Hair is shown by analysis to be the same as wool, and wool the same as hair, just as the diamond and charcoal and black lead are shown to be chemically the same.

The contention of the woollen-manufacturers adopted by the Treasury is, that if a "cloth" is produced from worsted, it was not intended to be charged with a lower rate of duty than woollen cloth, since it answers the same purposes as woollen cloth. It produces, they say, an incongruity in the tariff, and the law should be so construed as to take the incongruity out of it. Now the tariff is full of incongruities. In the nature of things it must be. Only the eye of omniscience could make a tariff covering thousands of articles, ranging from the lowest raw materials to the highest finished product, without incongruities. The question is whether it is the province of the Treasury officers to eliminate incongruities. An affirmative answer virtually takes the taxing power away from Congress and vests it in the Secretary, because he is to decide first whether there is an incongruity, and then what steps should be taken to eliminate it. He might put hair-cloth into the schedule of wire-cloth if he found it incongruous to keep them apart. That we are not far from this latitude of interpretation may be inferred from the following paragraph at the end of the decision:

> "The familiar maxim should be applied that 'a thing within the intention is within the statute, though not within the letter, and a thing within the letter is not within the statute unless within the intention.'"

Taking this maxim as a rule for executive action, no rate of duty or classification can be considered sufficiently stable for business purposes. Why, for instance, should not the Secretary rule that iron ore is subject to the same tax as lead ore, or that iron ore *is* lead ore? Fortunately, we have judicial tribunals in the land as well as taxing officers, and we are convinced that they will make short work of this Treasury ruling when it comes before them. The trouble is, that much time must pass before it can be brought to a hearing. The parties interested in the ruling will interpose delays. Heavy bills will run against the Government for extortionate assessment of duties. The public will pay two prices for worsted cloths. They will pay an increased price as consumers, in consequence of the new tax, and as taxpayers they will eventually refund to the importers principal and interest of the excess taken from them. This is an old story. Tariff bills have been deliberately "doctored" during their passage for the purpose of making litigation. The getting up of refunds is a branch of law-practice, and not an unprofitable one. Of course the taxpayers foot all the bills in the end. Fleecing the public goes on with regularity and in a thousand unseen ways.

It would exceed the limits of this article to go through the Secretary's decision seriatim. Much space is given to the contention that these coatings and suitings are not worsted at all. But it is a part of the literature of the subject that Mr. John L. Hayes, a member of the Tariff Commission of 1883, and an expert, conceded in his argument that worsted cloth was well known in 1883. It was made in New England as early as 1869 from worsted yarn spun near Philadelphia. Mr. Hayes conceded, further, that it was generally and specifically known in 1883 as "worsted coating and suiting." The truth is, that in 1883 nobody imagined that worsted coatings and suitings would ever be made at a lower cost than 80 cents per pound. There was where Mr. Hayes and Mr. Whitman and the rest of the tariff-tinkers made their mistake. Now they want Mr. Windom to correct it for them *nunc pro tunc*, and he has been weak enough to do so.

In conclusion, we ask particular attention to the following words in the decision—words which might have some relevancy if they were a true citation from the law, viz.:

> "In determining the questions involved, regard should also be had to the provisions of section 2499—that if two or more rates of duty should be applicable to *any imported article*, it shall be classified for duty under the highest of such rates."

Now, there is no such provision in section 2499 of this or any other law. Section 2499 says that "if any *non-enumerated* article equally resembles two or more *enumerated* articles on which different rates of duty are chargeable, there shall be levied, collected, and paid on such *non-enumerated* article the same rate of duty as is chargeable on the article which it resembles, paying the highest rate of duty." Worsted cloths being "enumerated articles" under the Supreme Court's decision in Arthur vs. Butterfield—*i. e.*, being embraced in the words "*all* manufactures of *every description* composed wholly or in part of worsted"—section 2499 has no reference to them.

STOCK EXCHANGE QUOTATIONS.

THE action of the Stock Exchange in removing all "tickers" from their room, and

cutting off the whole world from the customary knowledge of the range of prices of securities—a knowledge which has become necessary to the transaction of many kinds of business—is undoubtedly aimed at the Consolidated Exchange, a rival organization. The Consolidated Exchange, up to this time, has depended upon the Stock Exchange for the true quotations of the securities which are mostly traded in. Since there cannot be two quotations for the same thing, in the same market, at the same time, the trading body which has the larger capital, credit, and business will necessarily make the quotations, and any rival must be guided by those quotations. It would be ruinous for the smaller concern to be buying and selling Western Union, for example, half a point above or below the transactions taking place at the larger one. The essential thing about a quotation is, that any amount of securities within reach can be bought or sold at the figure named. This is the only significance of a quotation to business men. But this condition of things—namely, ability to take or to supply all the stock afloat at the given figure—can only exist at the financial centre of gravity. If trading is going on somewhere else in convenient proximity at different figures, the larger body can swamp the smaller one, or "scoop" it, in very short order.

Now we think the Stock Exchange has the legal right to exclude the public from its place of business. If so, it has the right to exclude reporters and telegraph operators. It has the right, also, to regulate business within its walls, subject to the rule that all persons not members shall be treated alike. This latter qualification has been established judicially in Illinois, and will probably hold good everywhere, since it is in harmony with the current and growth of law, although the Stock Exchange cannot be considered a "common carrier." The questions of most importance, however, are not legal, but economical. Will the Stock Exchange gain more than it will lose by boycotting the Consolidated, when the act boycotts the public as well? This is a serious question, and can only be answered experimentally; but we think it will soon be apparent to the members of the Stock Exchange, if it has not already become so, that a great mistake has been made in banishing the "tickers" from their precincts. The ticker has become a necessary part of financial life in all parts of the country. The credit system hinges upon it. Lending and borrowing take place in Chicago, St. Paul, and New Orleans, as well as in New York, Boston, and Philadelphia, on the faith of the ticker. To abolish this instrument, now that it has become indispensable to the daily life of trade, is simply impossible. If it is banished from the Stock Exchange, it will establish itself elsewhere in the shortest possible time, and business will rally round it regardless of the names of the people who control it, provided only that they are honest and responsible men. Honest and responsible men will hasten to any place where money is to be honestly made. It looks to us, therefore, as though the Stock Exchange had deliberately thrown away the best piece of machinery ever devised to bring grist to its mill.

But it is said that they will restore the ticker in their own way. They will make it a private and not a public ticker. They will serve their own members and such bankers as will agree to keep the ticker in a closet where nobody else can see it. We hope that nothing so foolish as this is in contemplation. Setting aside the impossibility of keeping secret a thing which is flying about in a hundred different directions, and which has a large pecuniary value, what view will the stock-trading public take of a measure which avowedly requires them to do business in the dark? At present all are on an equality as regards knowledge of prices and amounts of stock transactions. Nobody suspects for a moment that he can be deceived as to these fundamental things, or that anybody else can get the start of him. Buyers and sellers in Boston or Chicago are on as good footing as those in New York. Business exists by virtue of this fact.

Now let us see what will be the effect of the system of "pushing the pad," or the system of private tickers. No customer can rely upon the information he gets unless he is personally present in the office of his broker. Even then he must take the broker's word for it, which he may not always feel inclined to do. The customer always wants to save the one-eighth or one-quarter per cent. at which the market price stands at a particular moment. Especially he wants to know that he is not cheated out of it. The ticker is his guarantee that both due diligence and fair play have been used in executing his order. Strike out of the business all the orders that are due solely to the knowledge the ticker conveys and the confidence it breeds, and the balance, we venture to say, will not support half as many men as now get their living by virtue of their membership in the Stock Exchange. The introduction of private and confidential tickers will be a worse stroke of business than "pushing the pad," because everybody will suspect everybody else of having better information than himself. Everybody will know that valuable information is flying about, over his head or under his feet, to favored individuals, *i. e.*, to bankers and brokers and their clerks, and the particular friends of themselves and their clerks. What this is, he has no means of knowing with certainty or celerity. If he does business at all under such conditions, he must expect to lose his eighths and quarters, if not larger fractions. He will probably conclude either to abandon the business altogether, or to transfer his clientage to some place where more reasonable notions prevail.

If this were a real crusade against bucket-shops, there would be something to be said in its favor—that is, from the pulpit. But surely the Stock Exchange would not feel complimented if a moral purpose were ascribed to it in this matter. It has no objections to bucket-shops as dens of corruption, any more than to book-makers, or pool-sellers, or the jumping fleas of Chinese gamblers or the jumping frogs of Calaveras. The morals of bucket-shopping are simply outside of its ken, as they ought to be. Is it supposed that business in the Stock Exchange is lessened in any degree by the $10 bets at the bucket-shops? Those bets are very much like frog-jumping. There is no delivery of stocks and none is expected. The patron of the bucket-shop bets against the "house" that a certain stock will jump higher or lower the next time the ticker records a sale. Business on the Stock Exchange is not affected one way or the other by such gaming. The outcry against bucket-shops, so far as it proceeds from the Stock Exchange here, or from the Board of Trade in Chicago, has an extremely hollow sound.

The Stock Exchange will have to sink or swim on the principles of free trade. If, with its capital and prestige, its experience and character, it cannot stand open competition, it will have to go to the wall. The conditions for the formation of a Trust do not exist, because the Exchange does not sell material things, but only services. Anybody can sell services, and those who sell them most acceptably to the public will get the trade.

THE CONEMAUGH HORROR.

It is always easy to be wise after the event, and it is especially so now with reference to the indescribable catastrophe in a peaceful Pennsylvania valley, which has destroyed thousands of lives, swept away millions of dollars' worth of property, and carried unutterable grief into countless happy homes. As we look at the conditions as they existed just before the disaster, they are seen to have been arranged with terrible sureness to bring about precisely what has followed. Lying in a narrow valley, which was little more than a gorge in the mountains, were eight villages, aggregating between 50,000 and 60,000 inhabitants, the largest of the eight being situated at the lower end, with about 25,000 inhabitants. Through the narrow bottom of this valley ran two small streams which came together at the lower end, just below the largest village, forming a shallow, swift-running stream of a few hundred yards in width. Across this stream had been built a massive stone railway bridge. Far up in the mountains, 300 feet above the chief village of the valley, hung a huge body of water. As nature had designed it, this had been a small lake with natural outlets, which prevented it from being a menace to the valley below. But the hand of man sought to improve the work of nature. An immense dam, 110 feet in height, held back the water till the lake was more than quadrupled in size.

These were the conditions on Friday last. There had been heavy rains for several days. The artificially enlarged lake was really a receiving reservoir of the water-shed of the Alleghany Mountains. Every little stream running into it was swollen to a torrent. The lake, which in ordinary times is three and a half miles long, with an average width of over a mile, and a depth in some portions

of 100 feet, was swelled into a volume of water of enormous proportions. Between it and the valley below there was a dam nearly 1,000 feet wide, 110 feet high, 90 feet thick at the base and 20 at the top. This barrier gave way, and the water rushed into the valley in a solid wave with a perpendicular front of forty feet. It swept away the seven smaller villages like straw, hurled them, together with uncounted thousands of their inhabitants, upon the larger village, and then, with the accumulated ruin of the whole eight, dashed upon the stone bridge at the bottom of the valley. The bridge withstood the shock, and a new dam, as fateful with horror as the first had been, was formed. It held back the water so that the whole valley was a lake from twenty to forty feet in depth, with the remains of its villages beneath its surface. The wreckage of the ruined villages, piled from forty to sixty feet high against the bridge, spreading over a vast area, with countless bodies of the living and the dead crushed within it and struggling for life upon it, caught fire, and burned to the water's edge.

Surely never was a death-trap more ingeniously constructed, and never did one more remorselessly accomplish its mission. Everybody is able to see now where the main responsibility lies. It is admitted that the dam has been looked upon for years as unsafe. It is admitted that the dwellers of the valley have been repeatedly warned that it might give way. In fact, they had been warned so often, with no danger following the warning, that they grew indifferent to the peril, and when the alarm of the actual break came they refused to heed it. There is nothing remarkable about this; it is merely human nature. Least of all can it be cited as in any way lessening the real responsibility for the disaster. That must rest upon the persons who built and maintained the dam. They were constantly impressed with the peril which lurked in it, for, according to their own admissions, they were constantly warning the villagers. It does not lessen their responsibility a particle to say that their warnings were not heeded. On the contrary, it increases it, for there was so much the more reason why they should remove the danger by the only sure way—that is, by gradually removing the dam itself.

To suspend such a stupendous body of water in such a place, and to hold it there, knowing all the time that its barriers were unsafe, is a most incredible act of foolhardiness. It would be scarcely less reckless to construct under a city a huge powder magazine, and remain content with warning the inhabitants at frequent intervals that they must keep a close watch and be ready to run at any moment, for a careless person might drop a match into the powder at any time. If such a magazine were built, and if, in spite of the warnings, the city were to be destroyed, would anybody think of placing the responsibility upon the victims? The same governmental authority which would prevent the building of such a magazine ought to be able to interfere and prevent the building of such an obvious menace to human life and property as the Conemaugh dam.

The need of the hour is, however, not to dwell upon the persons who are responsible for the disaster—for that is far beyond the power of any human strength to bear or to attempt to expiate—but to give aid and relief to the afflicted survivors. This is certain to be generous, for the heart of the American people is stirred to its depths by the awful details of the greatest calamity known in our annals. The Governors of all the States, the Mayors of all our cities, and every church in the land are already at work, and everything that can be done will be. It is, of course, of great importance, not only to give quickly, but to have the aid forwarded in a systematic manner, and for this reason it will be well for all contributors to seek official channels for their contributions.

PROGRESS OF ELECTORAL REFORM.

THERE are now nine States which have on their statute-books comprehensive ballot-reform laws drawn upon the model furnished by the Australian system. One of these, that of Massachusetts, was passed in 1888; the remaining eight were all passed during the present year. For such rapidity it would be difficult to find a parallel in the history of reform movements in this country. It was in the spring of 1887 that agitation of the subject first took formal shape. The discussions of the Commonwealth Club of this city led to the formation of a committee to draft a law embodying the principles of the Australian method, for presentation to the New York Legislature. No comprehensive measure of the kind desired had been previously outlined. The nearest approach to it had been a bill which had been presented to the Michigan Legislature early in 1887, but this, while interesting as containing the germ of the reform principle, was incomplete and inadequate.

The Commonwealth Club Committee were not long in discovering that their task was no light one, and that no satisfactory measure could be drafted in time for presentation to the Legislature of that year. They accordingly postponed its introduction till the following year, early in the session of 1888. This was the original Saxton bill. It has undergone many changes since, but in principle, and largely in its methods of applying the Australian system to American election laws, it remains to-day substantially the same as it was at first. So generally have its merits been recognized that it has been made the basis of all the nine laws which have since been enacted. Its leading principles were: an absolutely secret ballot, all ballots to be printed and distributed at the public expense, none but official ballots to be received at the polls, provisions for independent nominations. These principles will be found, in practically the same form, in all the laws passed, as a brief examination and comparison of their leading provisions will show.

(1.) *As to the secrecy of the ballot.* Every one of the nine laws requires the erection of booths or compartments, into which the voter shall, after receiving his ballot, retire, and, free from all observation, prepare it for the polls. The proportion of booths to voters varies somewhat. The Massachusetts law says not less than one for every seventy-five voters. The Indiana law divides the whole State into voting precincts, each containing, "as nearly as practicable, 200 voters," each polling-place to be provided with three compartments. The Montana and Wisconsin laws require one compartment for every 50 voters, or fraction thereof; the Rhode Island, Missouri, and Connecticut laws require not less than one for each 100 voters; the Tennessee law not less than three, and the Minnesota law not less than two for each 100. This is a very slight variation. The important provision is, that all except illiterate and physically disabled voters are absolutely alone while preparing their ballots. The method of marking the ballots varies somewhat. In Massachusetts, Montana, Rhode Island, Wisconsin, Tennessee, Minnesota, and Connecticut the voter is required to place an X opposite the name of each candidate for whom he wishes to vote. In Indiana he is required to make the mark with an official stamp furnished by the election officers for the purpose. In Missouri he is required to erase the names of all candidates on the ticket except those for whom he wishes to vote.

(2.) *Ballots printed and distributed at the public expense.* Every one of the nine laws provides that the ballots shall be printed and distributed at the public expense. This provision takes away all excuse for assessments upon candidates, and removes from the polls all ticket-peddlers, "workers," and "heelers."

(3.) *None but official ballots to be used.* Every one of the nine laws forbids the use of any except official ballots. There is considerable variety in the methods provided for the marking of the official ballots by the election officers in such a way as to prevent the use of imitations. The Massachusetts law requires that "on the back and outside, when folded, shall be printed, 'Official Ballot for,' followed by the designation of the polling-place for which the ballot is prepared, the date of the election, and a facsimile of the signature of the secretary of the commonwealth or city clerk who has caused the ballot to be printed." The Indiana law requires the poll-clerks to write their initials in ink on the backs of the ballots. The Montana law requires the election officers to stamp on the back of each ballot before handing the same to the voter the words "Official ballot." The Rhode Island and Tennessee laws copy the Massachusetts method. The Wisconsin, Minnesota, and Missouri laws require the poll-clerks to write their initials on the backs of the ballots, and the Connecticut law requires them to write their full names on the backs.

(4.) *Provision for independent nominations.* Every one of the nine laws contains, with slight modifications, the principle first embodied in the original Saxton bill, allowing independent nominations by means of petitions or nomination-papers. In this way citi-

zens who are dissatisfied with all the regular nominations for a given office can, by uniting in favor of a suitable candidate, have his name printed upon all the official ballots, and have it distributed at the polls on equal terms with the names of the regular party candidates. This is the most deadly blow that could be aimed at the caucus or primary system, and is certain in time to lead to the destruction of that system's worst evils, if not to the abandonment of the system itself.

It is a melancholy reflection that the State of New York, which took the lead in this most notable and beneficent reform movement, should still be without a law embodying its principles. In no State, if we except Indiana, is that reform more urgently needed, and in none has public sentiment in favor of it been more emphatically expressed. For the failure to obtain it, the State has to thank its chosen Governor alone, who has twice vetoed what may emphatically be called a model measure.

PROGRESS AMONG THE NEGROES.

UNDOUBTEDLY there are a great many people in both the North and the South who feel quite disheartened as to the future of the negro race. To all such we commend a careful perusal of the twenty-first annual report of the Hampton (Va.) Normal and Agricultural Institute, by its principal, Gen. S. C. Armstrong, just presented at the close of the school year. The most discouraged could not resist the inspiring influence of the mass of hopeful facts and figures which are here grouped in compact form.

The history of Hampton itself is full of encouragement. It is, in Gen. Armstrong's words, the history of "a steady growth of over twenty years, from 15 to 600 pupils, never advancing a step without a struggle, never knowing beforehand how the year's expenses were to be met." The net annual cost of the Institute is now $98,000, which provides for 600 boarding-students from thirteen States and Territories (460 negroes and 140 Indians), a dozen day pupils, and a large corps of officers, teachers, managers, and assistants (for the industrial system pursued requires two full sets of instructors) —a total of about seven hundred people connected with the school, and almost wholly dependent upon it for their education and subsistence. The fundamental principle of the institution is the instruction of the pupils in the way to earn their own living; and about one-third of the annual expenses of $145,000 is the cost of labor done by the colored pupils, they being credited annually with from $45,000 to $50,000 for their work on the farm, in the shops, and in the various branches of household industry. The board, clothing, etc., of 120 Indians (not including tuition, which costs equally for both races) is paid by the United States Government at the rate of $167. In order to encourage them, their savings are given to them, one-half to be spent as they choose, the remainder to be saved until they return home.

The industrial system has now been pursued long enough to show its results in the life of pupils after they leave Hampton, and it is already amply vindicated. The examples which they offer of better living and farming are as valuable in the country regions where they teach as is the book knowledge which they impart. Not only the colored people but their white neighbors profit by contact with graduates from Hampton, whose knowledge of stock and agriculture not infrequently makes a marked change in the methods of the working people among whom they settle. Young women, as well as young men, are often local preachers as well as teachers, "sometimes antagonizing the old-time sensational shouting by a better statement of Bible truth, and becoming for their race what, centuries ago, the teacher was in our own civilization, leaders in all things." In short, the chief endeavor at Hampton is to fit the colored pupils effectively to lead to better lives the simple people among whom their lots are cast. "Labor," says Gen. Armstrong, "is the greatest moral force in civilization, and the moral value of our industrial system is its chief excuse. Students who come to us with little or nothing can pay their school bills in labor, thus making their poverty a means of grace, for through its training in self-help come skill, character, and success."

But the chief value of this report is not in its exposition of Hampton's work, but in Gen. Armstrong's treatment of "The Negro Question," to which the local discussion naturally leads. No man in the country is so well qualified to present the situation with knowledge and candor as Gen. Armstrong, whose twenty years at Hampton have brought him into intimate relations with the leading forces of Southern society. It is most gratifying to find that a Northern man and Union soldier, who has had such an experience as this, is altogether hopeful as to the future. He presents first an impressive showing as to what has already been done by Southern taxation and by Northern benevolence for the education of the negroes. The Rev. Dr. Atticus G. Haygood of Georgia, agent of the Slater Fund, computes that since 1862 there has been given for this object $10,000,000 through the American Missionary Association (chiefly Congregational), $2,250,000 through the Methodist Society, $2,000,000 through the Baptist Society, $1,600,000 through the Presbyterian Society, and probably $1,000,000 more through other channels—in all, say seventeen millions from the North for the education of the ex-slaves. This is less than half the amount devoted to that object from the self-imposed taxation of the South; the total Southern aid for negro education since 1868, in common and normal schools, having amounted to over $37,000,000. This money for the education of the blacks, it must be remembered, has come almost entirely from the pockets of the whites, Gen. Armstrong's estimate being that of every $100 paid in Southern taxation $91.50 is paid by white people.

The first and most important effect of this education is the establishment of law and order. While lawlessness is still the curse of some sections, there is, even in the "black belts" of the Gulf States, a steady, if slow, advance towards good government, the gain in every ten years being noticeable. Gen. Armstrong admits that he did not himself believe this until his own observations and the opinions of some thoughtful Southern men convinced him of it. He finds the popular talk about the negro to be in a hopeless key; but to the direct question, "Are the laborer's pigs and poultry and crops safer than ten years ago? are the loafer and thief more likely to get their due? are the negroes inclined to get homesteads?" the answer is usually, "Yes." While there are, unquestionably, multitudes of "low-down" negroes and many wretched neighborhoods, intelligent white men everywhere in the South admit that the line between the good and the bad is every year more distinctly drawn—a sure proof of progress.

The gain was never so rapid as now, and Gen. Armstrong believes that "this basis of hope is beyond the reach of any political pressure." Indeed, he thinks that politics had better be dismissed from consideration, and that time through education is the only cure of the evils which remain. "Increasing enterprise at the South and the new industrial life of the people," he says, "are helpful conditions, and, where they are supplemented by education, are pushing the better part of the negro race into prosperity, giving them a place and making them a power. The talk of disfranchisement is idle; it comes too late; the negro is not what he was twenty-five years ago, and the next half-century will see great changes. As prosperity creates social distinctions, political divisions will follow, and the human nature of both races may be trusted to adjust the relations, which are, indeed, to-day, generally amicable. In those localities where lawlessness and injustice have repelled capital and immigration, the penalty of impoverishment is the swift result, and Government can do little; the people must finish the work of reconstruction."

By a curious and encouraging coincidence, we receive this report of Gen. Armstrong, the most prominent white educator of Southern negroes, at the same time with the appearance in Charleston, S. C., of the *New South*, a paper printed and edited by colored men, which in its salutatory preaches exactly the same sound doctrine. "We believe," it says, "that the future of the negro depends infinitely more upon his own efforts than upon any other agency at work in his behalf. There is no railroad for the negro. He must ascend the ladder of moral, material, and intellectual development as other races have done; and it seems to us that it is high time for him to cease following the *ignis fatuus* of politics, and begin the work of development upon those lines only on which real progress is possible. The politician has long since exhausted his storehouse in the negro's behalf."

It is thus obvious that, in the opinion alike of the wisest whites and of the wisest blacks, "the negro problem" is solving itself as rapidly as could be expected, and

in the only way that solution is possible. Interference from the "Bill" Chandlers and Gov. Forakers of the North can only work harm.

TRADE COMBINATIONS IN GERMANY.

THE development of pools and syndicates in Germany has gone quite as far as in America. The same industrial causes have been at work in each case; but the result in Germany has been more complete, because the legislation of that country has been more consistent. In the United States we have encouraged them by tariffs, and at the same time have tried to prohibit them by State laws. In Germany the internal as well as the external policy of the Government has been favorable to their growth.

The first important German syndicate, that of the tin-plate-makers, dates from 1862. Few others were formed until after the crisis of 1873. The period of depression which followed, combined with the gradual development of protective tariffs, caused them to multiply rapidly in the years from 1876 to 1880. Kleinwächter, writing in 1883, says that at that time there was hardly a branch of trade which did not have its combination or syndicate. Matters have gone so far that syndicates as such have a newspaper which is their avowed champion and official organ. This paper gives the following list of combinations existing at the beginning of the present year, which, for Germany at any rate, may be taken as authentic:

(1.) International combinations: International steel-rail pool (of long standing but temporarily broken up); Austro-German iron syndicate; international mining conventions for the sale of lead, tin, and zinc; international conference of glassworks; international dynamite trust; thread-manufacturers' combination; Anglo-German strontianite syndicate; herring-fisheries agreement; copper syndicate.

(2.) German trade combinations: Four separate coal and coke combinations for different districts; cast-iron combination of the Rhenish Westphalian district; German rolling-mills union, with four distinct subdivisions; iron-ties combination; union of wire manufacturers; four combinations of tin-workers; union of steel wheel-makers; union of fork-manufacturers; brass rolling-mills union; zinc association; lead syndicate; lime combination; cement union; glass-manufacturers' union; brick-makers' union; soda syndicate; bromide combination; potash combination; white-lead syndicate; "sulphonal" syndicate; oil-manufacturers' union; three distinct syndicates of salt works; bank of alcohol producers (which has recently failed); Bavarian society for the sale of alcohol, preliminary cotton-thread union; Southern cloth syndicate; jute syndicate; Saxony embroiderers' union; wrapping-paper association; cardboard association; paper-bag combination.

To this list, which is an authoritative one, should be added several transportation companies, and the vast number of railroad pools which have been encouraged and systematized from the very outset, the Government itself, on its own lines, actively taking part in such contracts.

It is interesting to see how pools work where they are thus recognized and favored. Let us take in detail the history of the rolling mill syndicate, as given by Professor Brentano. This association was formed in 1887. It was arranged for three years, to terminate at the end of 1890. It originated in Silesia, and was by no means the first combination of the sort, one having been formed soon after the crisis of 1873 and another in 1883. The present arrangement differs from its predecessors in being more complete. In 1877 the representatives of the Silesian mills, with one exception, placed their sales under the direction of a single agency. The plan worked so well that the Association soon extended itself to the Rhine and Westphalia districts as well as to central Germany. The south German works joined somewhat later. The territory of the Association is now divided into four groups corresponding to the geographical divisions just mentioned. Each set of works has a monopoly in its own district. The proportions to be sold by the different mills are controlled by a central bureau or clearing-house in Berlin. Besides these separate territories there are a number of neutral grounds (East and West Prussia, Pomerania, Mecklenburg, Brandenburg, and Saxony) where partial competition is allowed, but every precaution is taken against cutting prices.

As far as internal competition goes, the whole matter seems to be accurately regulated, and a further extension of the arrangement prevents complications from the Austrian side. But the possible competition of England or Belgium or of those few German mills which do not belong to the Association has some curious consequences. In the first place, the product is shipped to foreign countries other than Austria at much lower prices than are charged in Germany. In the second place, deliveries at frontier stations are made at a price corresponding to that for which foreign producers are willing to deliver, that price being, of course, somewhat increased by the German tariff. As stations are further and further from the frontier, the price becomes higher and higher, proportionately to the increase of railroad charge which prevents the cheap delivery of foreign iron. Again, prices are usually made somewhat lower in large cities than in small ones, and purchasers on a large scale are given rebates.

If it happens that an independent German mill makes lower prices than those fixed by the syndicate, the nearest mill belonging to the Association has not merely the right but the duty to compete, and any losses which it may suffer from rate-cutting are made up out of the common purse. This renders outside competition dangerous. A further means at the command of the Association for suppressing such competition is not unlike the American method of boycotting. No one mill is likely to furnish rolled iron in all its forms. If a manufacturer deals with a producer outside of the syndicate, the other associated mills will not furnish him his necessary supplies, or will furnish them only on such conditions as seriously hamper his activity.

For the present the arrangement seems perfectly strong. The authorities approve of it; the law makes an agreement of this kind enforceable against the various members; the deposits which they have made make it dangerous to withdraw. All this strength only makes the possible abuse of the system more noticeable. For the present, at any rate, the policy of the Association as just outlined involves all the abuses to which monopolies have been liable in the United States. The arrangement favors the large producer at the expense of the small producer; it favors the large city at the expense of the small; it gives a special advantage to those who have the benefit of foreign competition, so that shipments to foreign countries are actually made at much lower prices than home deliveries. Whether prices will be steadied, remains to be seen.

The history of the rolling-mills, as thus outlined, represents fairly enough the facts with regard to the arrangement of other pools in other lines of industry. We have given it simply as a set of facts with comparatively little comment. It is too early to predict with anything like certainty what will come of it. The German Government obviously regards with favor a centralized organization of industry. It is in harmony with the centralized military system and with the methods of compulsory insurance, which have the indirect effect of reducing the laborers to more complete dependence even while apparently making a provision for their old age. Under such circumstances it is natural that the Government should be ready to help the organization, and to disregard the possible effects on the public. In America, where we have no systematic policy on these matters, we may expect self-contradictory legislation for some time to come.

PICTURES AT THE ROYAL ACADEMY.

MAY 16, 1889.

A CAREFUL examination of the Royal Academy Exhibition does not encourage one in any great hope for the art of the future. A certain tendency to realism exists, it is true, among the younger men, with a desire for better drawing and some definite method of painting, but all improvement ends here: very little power of invention can be detected, very few efforts at historic painting or ideal work of any kind among the rising painters. As is to be expected, the principal places on the line are occupied by the works of the R. A.'s themselves and the Associates, and this insures the usual degree of merit or of commonplace in the general aspect of the rooms; for if some are rather below the mark one year, others may have surpassed themselves, so that it is in the work of outsiders that we would seek some promise of progress, and it is disappointing to find so little to arrest one's attention in all these acres of pictures.

A work which seems to have immediately met with recognition is "The Prodigal Son" of Mr. J. M. Swan, an animal painter of great distinction, who studied in Paris, and whose drawings of animals were much praised by Ruskin many years ago. His work hangs on the line, although he exhibits here for the first

time this year. Black swine among scarlet poppies, green grass, and weeds, surround the prodigal, who sits with his back towards us on a stone, his head resting in his hands in an attitude of despair. The landscape around him is arid, the sky dark and ominous, yet all is full of splendid, harmonious color; and although nothing could exceed the perfection with which flowers and leaves and stones are painted, the detail is never obtrusive. The swine are admirably drawn; the prodigal himself, though good in general effect of flesh painting, is the least satisfactory point in the picture.

Mr. John Sargent's portrait of Henschel the singer is a very vivid sketch, an excellent likeness, done with great skill and facility of handling; but it gives the impression of being rather under life-size, which is unfortunate. The head of Irving the actor, another sketch, is also good as a likeness, although Sargent has exaggerated the massive black eyebrows, and there is too much evidence of hasty execution for it to be agreeable as a work of art. The full-length portrait of Mrs. G. Gribble is the most important work he sends here this year. The lady turns towards the spectator with figure in profile; she is hugging a gray fur boa up against her cheek; her dress, of black-striped velvet and satin, is admirably painted; the background is gray blue. The whole picture is harmonious and quiet, and brings out the delicate bright tints of the fair head and bare arms.

"All Hands to the Pumps," by H. S. Tuke, is also excellent in quality of painting and in careful rendering of individual expression in the faces of the sailors. Only one thing does not explain itself: if the men are supposed to be actually at work, why are their hands quite passive on the pumps? We rather suppose, from their attentive, eager faces, all looking towards the same point, that they are expecting the captain's order for action. The wave-swept deck, and the intense anxiety on every face, help to tell of the excitement of the moment. Arthur Lemon's "Outpost of Gauls on the Roman Campagna" is one of the most interesting landscapes in the exhibition, both in subject and in execution. No. 1128, "The Seamew's Nest: an Idyl of Morocco," by E. Wauters, a Belgian artist, attracts one by its simple, broad execution, and truthful color. A young Moorish girl in white, carrying on her back her little sleeping sister, is looking at some object beyond the white sea wall across which her arm lies stretched. The girl, the wall, and the distance are all bathed in the golden sunlight of the East; only the children's brown faces tell in dark color in the midst of so much light. The Eastern type of the elder child, without any actual beauty of form, by its excellent drawing and relief makes the picture, simple as it is, very remarkable. Edward King, a name we have not before noticed, has a very clever work with the inscription, "That it may please Thee to protect all fatherless children and widows." We see the interior of a pew in a village church, in which is seated a lady in black, who is trying to awaken to the service the attention of a very small boy. Her little girl beside her, in large white poke bonnet, is looking out of the corners of her eyes, with a most amusing expression of virtuous indignation at her little brother. The background, of gray stone column, with the light coming through a window, is very well managed; the severity of color in the work, limited to black, white, and gray, suits the character of the scene very well. The expression of both mother and children is excellent, and the manner of painting as good as anything here.

Among the works of outsiders, Mr. S. J. Solomon's main contribution is chiefly notable for its great size. Year after year he sends to the Academy immense compositions which cannot fail to arrest attention and invite criticism. These canvases are invariably filled with half-nude figures in violent action, and the forcible drawing is rendered still more striking by the high exhibition key of color which he paints up to. "Sacred and Profane Love" is the name he has chosen this year; and in all truth, if he has chosen a title used by Titian before him, his work in no way plagiarizes the great Venetian master. It is a very unattractive composition, not even painted with Solomon's usual skill. The centre of the canvas is filled by the protecting angel, with vast outstretched wings. Under the left wing, husband, wife, and child are taking refuge; the man looks back in terror and aversion to Profane Love, who, in the immediate foreground, in unseemly undress, pelts her victim with roses while dragging him over a precipice. This figure, supposed to represent beauty, does not at all realize the artist's intention: the lurid light and confusion in this part of the picture are quite bewildering. Mr. Solomon's less pretentious works, the portrait of Sir J. Simon, Serjeant-at-law (No. 1239), and the portrait of Miss Raphael (No. 393), have more merit. No. 756, "The Harbor Bar," of Adrian Stokes, is a sea-piece full of charm. Fishing-boats, with red-brown sails, are starting for the night's work. One sees the gray sands in the foreground, and beyond the sea dark clouds covering the evening sky, still tinged with sunset gold.

We now turn to the work of the Royal Academicians themselves, not having space to mention many good landscapes, a branch of art which seems to be more adapted than any other to the English temperament. Sir John Millais's "Murthly Water," No. 74, is a faithful transcript of nature. The Tay near Dunkeld is the running river we see in the clear light of a bright autumnal afternoon; purple hills in the distance meet the wind-swept sky. The short bracken turning orange, the dry grass and fallen leaves, the bare trees with logs lying in the foreground, with the half of a boat, beside which two fishers are trying their luck, show that Sir J. Millais's hand has not lost its cunning, and that he still has the power of doing excellent work. No. 242, "The Old Garden," is less successful: the empty space of path in the foreground near the fountain seems to require figures to make a picture; the tall, well-trimmed hedges are rather monotonous in painting, and the yew trees beyond are done in a slovenly manner.

Two works of the President, Sir Frederick Leighton, hang in the first room—"Invocation," No. 31, and "The Sybil," No. 25. They are both astonishingly bad. The descriptions and incidents concerning their production which have been given to the public by the daily press and the magazines, had stirred up much interest in these pictures, so that many will be disappointed to find that, after all has been said and done, it is the same well-known face of Sir F. Leighton's model draped in the usual fashion, only the oft-repeated theme has lost interest and charm. The color is more muddy than usual in the "Sybil," and still more lifeless and waxen in the "Invocation." For this latter we hear that the arms had to be modelled in clay so as to preserve the swing of the drapery in this difficult position. It is in the *Magazine of Art* for this month that reproductions from studies of draperies and studies for the nude for these figures are to be found, with a full account of Sir Frederick's method of work. After all, it is not the affair of the public to know how each artist does his work, but simply to judge of what is presented to it as finished and complete. Even less pleasing are the Greek maidens playing at ball on a housetop, in the long gallery, No. 300. The grace of line which characterizes almost all the works of our accomplished President is here completely wanting; the figures are neither graceful in action nor possible. The shoulders of the girl who has just thrown the ball make a very ugly line, hiding her face, and her draperies are too much broken up to give the idea of the momentary action of the figure. The girl who is trying to catch the ball stands poised on the tip of one foot with legs far apart; the attitude is not possible. The color is very much the usual combination of mulberry red and yellow green, with blue and white in the sky and mountainous distance.

There is great poetic feeling and a good quality of moonlight effect in Frank Dicksee's "The Passing of Arthur" (No. 150). The barge, rowed by spectral oarsmen, is just leaving the shore; the three Queens surround King Arthur, whose face, pale in death, lies on the lap of one, while another kisses his hand. The oarsman standing at the stern is pushing the barge out from among the thick reeds which fringe the shore. The head of the King is very weak and destroys the interest of the work, which reminds one strongly of the poetic conceptions of Poole, an Academician of some twenty years ago.

Alma-Tadema has sent but one picture, "At the Shrine of Venus," the interior of a Roman barber's shop, painted with all the perfection of texture and harmony of color which makes his work so remarkable. Two ladies are reclining on a couch waiting for their turn. The one, with loosened locks, is gazing into a hand-glass; the other is listlessly holding hers downwards. Their draperies are purple and pale yellow, while a third lady in gray is entering the shop. She is holding a flower in her hand, an offering to Venus. One sees arranged along the street which makes the background a row of wigs of different hues, and a huge blue amphora, between which appear the heads of the passers-by, discussing the wares; two attendants fill up the space within the shop. The figures are remarkably graceful, and have more beauty of feature than usual with this great master of detail. G. F. Watts sends a roguish Cupid knocking at a door, his head covered with a monk's cowl; he is looking around, with mischief in his eyes, at the spectator. His lank figure, with wings of bright red, orange, blue, and tawny white, is by no means hidden by the monk's habit trailing behind him. This work is very characteristic of Mr. Watts's manner of painting. "The Habit does not make the Monk" is its title.

Mr. John Brett's landscapes have at any rate the merit of careful study of nature, and his subject this year (No. 414) is interesting: "The Lion, the Lizard, and the Stags," the well-known rocks on the Cornish coast—a splendid sea-view, full of color in the rocks. Unfortunately, his painting of sea is too metallic and small to get any breadth of effect. There is too much detail everywhere. Mr. Boughton's full-size portrait picture of two ladies on a seat in a garden near the sea, across which the sun is setting, is not good. His method is not adapted for this large scale of figure-painting. His other piece, "A Salmon River, the Beauly, Inverness-shire," No. 465, has more the qualities we expect to find in his work, though even here the interest of the figures is very slight. No. 243, "The Young Duke," by W. Q. Orchardson, is one of the pictures of the year by merit of its painter rather than by any

interest of its own. The Young Duke, who, with his friends, is in Louis XV. periwig and flowing coat, sits at a table laden with flowers, fruit in silver dishes, Venetian glasses full of wine. His boon companions stand drinking his health, while he lolls vapidly back in his chair. The faces seem for the most part to have been painted from the same model. Besides this monotony of form, there is also throughout a pervading tint of yellow ochre. The table, coming close to the spectator, seems, by an awkward effect of perspective, to carry objects of immense size compared to the heads behind them, which are supposed to be far off. No. 255, "Preparing for the Festival of Anubis," is the most important of E. Long's Egyptian scenes. A girl stands holding a blue vase, watching with apparent interest some performing dogs who are telling out letters at the bidding of a priest sitting on the ground.

Briton Riviere, the very popular painter of birds and beasts, has two works, of which the most noticeable is No. 231, "Of a fool and his folly there is no end." A number of horsemen whose steeds have been started by a court jester, in scarlet robes, on a donkey, brandishing a bladder full of peas, are being carried full pelt down a steep hillside. A most accomplished painter of horses is Mr. Andrew C. Gow, whose manner recalls Meissonier, although his work is not so brilliant in touch as that of the French master. Gow's subject is taken from Clarendon's 'History of the Rebellion.' King Charles I., on a white charger with the Prince, surrounded by his cavaliers, is before the walls of Kingston-upon-Hull in 1642. He is parleying with Sir J. Hotham, Governor of the town, with drawbridge up and gates closed against him; the Cavaliers, with drawn swords and horses firmly held in, are relieved against the red-brick ramparts and the city moat. The Humber with its shipping is in the distance. The whole picture is very well composed, and tells its story thoroughly; the drawing throughout is excellent. The horses, all very impatient of standing still, are especially good in action.

Herkomer has no less than eight works this year, of which seven are portraits painted in his usual manner, only, as years go on, that manner is getting more monotonous and the work seems done with less care and feeling. His only subject picture, "The Chapel of the Charterhouse," has been purchased by the Academy for the Chantrey bequest, and this acquisition will without doubt meet with criticism from those who understand that bequest as applying either to the best work of the year or to that of some young struggling artist, for under neither of these conditions could Herkomer's work be classed; the picture being a very poor one. The pensioners are assembling before the service in the chapel of the Charterhouse. They are all covered with their black cloaks. We learn from a note in Mr. Blackburn's catalogue that Professor Herkomer chose the faces of the pensioners not from the Charterhouse brethren, but, wishing to depict types, he painted characteristic faces from among his friends. We can understand that the subject might be treated in a very interesting manner, but unfortunately this is not the case, for neither in arrangement nor in painting is this work distinguished.

We must now pass on to the Sculpture Gallery, where Mr. W. B. Richmond's "Arcadian Shepherd," his principal work this year, holds the post of honor. The figure of the young shepherd is of heroic proportions. He is walking down hill, his head raised with parted lips as if singing for joy of youth and strength. His outstretched arms curl round his crook, which he is holding behind his shoulders, and curving by the action of his arms, the left arm being extended on a level with the shoulder, while the right lies along the figure to the elbow, then stretches out with hand round the crook. The play of muscles throughout the torso is very fine; the ribs show the drag of the uplifted arm. The weakest point is the setting of the head on the shoulders, and perhaps the Greek character of the work would demand greater simplicity in the head. The statue is in tinted plaster. It is meant to be cast in bronze, and will undoubtedly look finer in that substance. The most attractive work in this gallery is Mr. Onslow Ford's "Singer," in bronze, a young Egyptian girl standing beside her harp. Her arms, with slight outward curve, hang down; one hand is striking the strings of her instrument richly ornamented with enamel in color. The stand and column on which the statuette is placed are also in bronze cloisonné. The figure is about three feet in height. The head is thrown back with half-closed eyes; an Egyptian head-dress hangs on either side of the cheeks. The whole thing has a very charming decorative character, very Eastern in type of figure and face.

Mr. Hamo Thornycroft sends a small bronze copy of his well-known statue of "Teucer," now in the South Kensington Museum. The statuette is far more pleasing than the statue. The same artist also sends two bronze panels for the Gordon memorial in Melbourne. In the first, Gordon is seen teaching ragged boys at Gravesend; the second represents the death of Gordon at Khartum. In both, the subjects are treated literally, without any beauty of line or form, truth to nature only having been considered. Modern costume does not lend itself to sculpture, and the result of these faithful representations is very dull. Mr. Gilbert has a bust of G. F. Watts. The head seems to be rather larger than life, and has not the refinement of feature and expression of the great painter. The pose of the head is not at all characteristic, and the pupils of the eyes are too deeply scooped away. Harry Bates's "Hounds in Leash" is a fine work injured by the rather monotonous treatment of surface; man and dogs having exactly the same quality of roughness. A very good portrait bust of Robert Browning is by Miss Henrietta Montalba. J. E. Boehm has a portrait of the late Frank Holl, and Mr. J. M. Swan a bronze study of a young Himalayan tiger. We must also notice a bronze head of a girl resembling in purity of type and in pathetic expression some early Florentine master. It has the line "In silence prayeth she" for a title, and is by G. G. Frampton.

The water colors and pastels are unusually poor this year: as very few people, comparatively, visit the water-color room at the Academy, it is not surprising that members of the societies are better content to exhibit only at their own exhibitions. One realistic scene is forcibly given in pastel by Hubert Vos: it is a room in the Brussels almshouse for women. While neither beautiful nor refined in treatment, it has the quality of being very like the real thing; and this appeals to many picture-seers who do not care about art excepting as representing faithfully what they see and know.

HARRIET SHELLEY AND CATHERINE NUGENT.—I.

DUBLIN, May 11, 1889.

As is well known, Shelley, with his girl-wife Harriet, aged sixteen (and her sister), visited Dublin early in 1812, a few months after their marriage. It is not so well known that one Catherine Nugent, aged forty, shop-assistant to Mr. Newman, a furrier, who carried on business at No. 101 Grafton Street, then became intimate with the young people for some years, and kept up a correspondence with Harriet. She was a woman of an ardent and enthusiastic temperament—in thought and feeling what would be called much above her station in life. She had been intimate with many of the leaders of the patriotic party, and was well prepared to appreciate the spirit in which the Shelleys came to Ireland. Her silhouette, taken at a somewhat later period, is before me.* It depicts a countenance singularly bright, attractive, and perspicacious. I have no doubt she is referred to by Dr. Anster in his article on Shelley in the *North British Review* for 1847. He was intimate with her, and an expression which will be found in letter ii of the correspondence occurs in that article:

"One copy of Shelley's pamphlet was obtained through an Irish friend of Shelley's, whose acquaintance with the poet originated accidentally. A poor man offered the pamphlet for a few pence—its price stated on the title-page was five pence. On being asked how he got it, he said a parcel of them were given him by a young gentleman who told him to get what he could for them—at all events, to distribute them. Inquiry was made at Shelley's lodgings to ascertain the truth of the vender's story. He was not at home, but when he heard of it he went to return the visit, and a kindly acquaintanceship thus arose. The Shelleys, husband and wife, were then Pythagoreans. Shelley spoke as a man believing in the metempsychosis, and they did not eat animal food. They seem, however, to have tolerated it; for on one occasion a fowl was murdered for our friend's dinner. Of the first Mrs. Shelley, the recollection of our friend is faint, but is of an amiable and unaffected person, very young and very pleasing, and she and Shelley seemed much attached."

The following extract of a letter from Harriet Shelley to Eliza Hitchener, dated Dublin, March, 1812, prepares us for a knowledge of this friendship. It was discovered by Denis F. MacCarthy in the Irish Record Office (whither, probably, it had drifted through some interception of Shelley's letters and papers by the Government), and is to be found in his 'Shelley's Early Life':

"I believe I have mentioned a new acquaintance of ours, a Mrs. Nugent, who is sitting in the room now and talking to Percy about virtue. You see how little I stand upon ceremony. I have seen her but twice before, and I find her a very agreeable, sensible woman. She has felt most severely the miseries of her country, in which she has been a very active member. She visited all the prisons in the time of the rebellion, to exhort the people to have courage and hope. She says it was a dreadful task; but it was her duty, and she would not shrink from the performance of it. This excellent woman, with all her notions of philanthropy and justice, is obliged to work for her subsistence. To work in a shop which is a furrier's. There she is every day confined to her needle. Is it not a thousand pities that such a woman should be so dependent upon others? She has visited us this evening for about three hours, and is now returned home. The evening is the only time she can get out in the week. But Sunday is her own, and then we are to see her. She told Percy that her country was her only love, when he asked her if she was married. She called herself Mrs. I suppose on account of her age, as she looks rather old for a Miss. She has never been out of her own country, and has no wish to leave it."

A close intimacy was formed between Harriet Shelley and Catherine Nugent, and a correspondence ensued of which Harriet Shelley's share was preserved. I copied the following letters eight years ago from the originals in the possession of Catherine Nugent's niece. Professor Dowden had the use of my manuscript

*I have also in my possession a mask and a daguerreotype taken after death.

when writing his 'Life of Shelley.' He loyally adhered to an agreement not to copy any portion or give any clue to its existence. The death of Catherine Nugent's only representative now renders possible their publication.*

I.—Harriet Shelley to Catherine Nugent.

If you are not engaged will you give us your company this eveng. as Mr. S. is not at home. Bring your work. Yours truly

To MRS. NUGENT, H. S.

Wednsy. 17 Grafton St.

II.—Harriet Shelley to Catherine Nugent.

Mrs. Shelley's compts. to Mrs. Nugent, and expects the pleasure of her company to dinner, 5 O'clock, as a murdered chicken has been prepared for her repast.

Direct NANTGUILTE, April 16th [1812], RHAYADER, RADNORSHIRE, South Wales.

My Dear Mrs. Nugent,

After travelling over an immense tract of country in the hopes of finding a house in which it would be our greatest joy to welcome a *native of that country* so dear to my recollection, tho' at the same time so painful to the feelings of one who unfortunately, being an *Englishwoman*, must never hope to see realized her warmest wishes in behalf of a *nation* so deserving of every happiness which this and the next world can afford. You know when we left Dublin the wind was against us; but by making several tacks we contrived to get out of harbour, and continued sailing 36 hours when we had been informed that at the most we should certainly be no more than 12 hours. There is no dependance upon the word of a sailor, you may have heard me say, and now I am more confirmed in it. We did not arrive at Holyhead till near 2 Oclock on Monday morning. Then we had above a mile to walk over rocks and stone in a pouring mist before we could get to the inn. The night was dark and stormy; but the sailors had lanterns, or else I think it would have been better to have remained on board. As soon as we could get supper we did. We did not eat anything for 36 hours all the time we were on board, and immediately began *upon meat*; you will think this very extraordinary, but Percy and my sister suffered so much by the voyage, and were so much weakend by the vegetable system, that had they still continued it would have been seeking a premature grave. I fared the best of any as I slept most part of the time. On Tuesday we began travelling and that day week we found our way here. Strange as it may appear, we have been all through North Wales to find a house, but not one presented itself, nor should we have this if a very unpleasant circumstance had not taken place. The person to whom it belongs was a sea captain, and a brother in law of his has involved him in bankruptcy by very unfair means, and has himself absconded with £2,000, therefore now all this mans property is to go to satisfy the creditors. He was his partner in this countrys bank and has defrauded many people of their money. The beauty of this place is not to be described. It is quite an old family house, with a farm of 200 acres meadow land. The rent is £98 a year, which we think very cheap; but by letting a part of the farm we can reduce it to £20 per annum. I must now say adieu. We all unite in kind regards, and believe me your sincere *friend* H. S.

IV.—P. B. Shelley to Catherine Nugent.

NANTGWILT, May 7, 1812. WHAYADER RADNORSHIRE, NORTH WALES.

My dear Madam:

Harriet is now recovering from an intermittent brought on by the fatigues of our journey. I have been considerably anxious about her though I have no doubt but that in a short time she will be able to thank you for your kind letter, and inform you herself of her convalescence. Your letter arrived yesterday morning Accept our sincerest united thanks, for tho' you are Harriet's correspondent remember that you were first my friend. I shall not readily forget the greatness of mind on your part that presented me with a knowledge of you. How unequally has the detestable system by which human beings govern their affairs distributed poverty and wealth. How much do you suffer from the distribution. Had you the millions which the Prince will possess. How would England not be benefited were he compelled to sit in Mr. Newman's shop and sew fur on to satin. In what would she be injured. That this remark is not meant for flattery you will believe. No, your opinion of your own abilities is far too low. With regard to the notions you may have framed of abstract perfection, I know not how true or how false your opinion of yourself may be; but this I know that with regard to what human nature is your character is formed to excite that esteem and attachment which our little party feels for you. I fear that hunger is the only excitement of our English riotings; any change which they may produce appears to me likely to be devoid of principle and method. I sincerely hope that a just indignation against that crowned coward and villain the Prince does prevail, but I do not think that it has gained any strength. The local Militia, that body of soldiery nearest approaching and immediately mingling with the character of citizen have been called out near Carlisle and other great towns to quell the populace. That the Government has dared to call the local into action appears to be an evidence that at least they do not think that disaffection to Government (except so far as directly connected with starvation) has any share in these tumults. War with America appears in a manner now inevitable. Ministers have been at some *ministerial* work in that country, viz., Capt. Hemgd., Sir [paper torn] Craig. Redfern's letters have not yet been distributed. They were packed in a box which we left at Holyhead; but which we expect by the carrier tonight. Remember me to Reynolds; tell him I shall not be idle about Redfern, and that as soon as I have done anything I will write to him. We expect to take possession of this house and farm on Thursday next. Accept, my esteemed friend, from that time the sincerest welcome that our warm hearts can give you. Believe that if anything can add to the pleasure we shall receive from your visit it will be the earliness of the period which you fix for its commencement. With sincerest wishes for your peace and health, in which Harriet and Eliza join, believe me, yours most truly. P. B. SHELLEY.

Did you see Sir F. Burdett's speech on the Marylebone Baneichs [?]*

V.—Harriet Shelley to Catherine Nugent.

Direct CUM ELAN, June 7th [1812], RHAYADER RADNORSHIRE, S. W.

My dear Mrs. Nugent

So long a time has passed since we have had the pleasure of hearing from you that the various conjectures arising in our minds as to the cause require explanation. I am sure of this, should you chance to receive my letter. But in the meantime let me tell you all our disappointments. First, then you will see from the date of this that we are not at our beloved Nantgwylt. Alas that charming spot is, I am afraid, never destined to be ours! The possessor cannot settle with Percy, and indeed he has acted such a *villanous* part that we have been obliged to leave him, and for a few days take up our residence at Mr. Groves, about a mile and a half from our favourite residence. You may imagine our sorrow at leaving so desirable a spot, where every beauty seems centred. I had hoped to have seen you there; but I am afraid I must relinquish and with sorrow so fallacious a wish. We have some thoughts of going to Italy till Percy is of age, as the same difficulty will attend us wherever we. [*sic*] One very great inducement to go to Italy is the warmth of the climate, as Percy's health is so extremely delicate that the cold air of this country is not likely to benefit him. What have you thought upon the murder of the Prime Minister? Undoubtedly it was very distressing, but the man's composure is astounding. I think he was a Methodist from his behaviour. I am sorry for his family. It had been better if they had killed Lord Castlereagh. He really deserved it; but this poor Mr. P. I believe was a very good private character. Do you not think it nonsense for all the little towns and villages to send petitions to the Prince upon the occasion. I suppose Ireland has not done anything half so silly. How do your poor countrymen go on? I hope things are not so scarce there as here. How very lovely the weather is now. Summer comes at last and with it brings its disappointment for you are not the only one I had hoped to have seen at Nantgwylt. Godwin's children were to come to us; but our evil genius has stepped in and forbid us that happiness. We are to begin travelling again soon and where to bend our steps I know not; but we think of going to the seaside until our passports come. We must remain here until we receive remittances from London. Percy is related to Mr. Grove, and his wife is a very pleasant woman, tho' too formal to be agreeable. He is a very proud man. Therefore you may guess how we pass our time. Do you ever see Mr. Lawless. We hear from him sometimes. As to the poems I have no idea how and when they will come out. The printers are very slow in their operations. I must now conclude in hopes of hearing from you soon. Believe me your sincere, affectionate friend H. S.

Percy and Eliza desire to be remembered.

VI.—Harriet Shelley to Catherine Nugent.

Direct LYMOUTH, June 30th [1812] near BARNSTAPLE Devonshire

My dear Mrs. Nugent.

Now that we are again settled I take up the pen in the hope of giving that pleasure which I receive from reading your letter. I received it during my stay at Cum Elan and a few days after we left that lovely spot, and its amiable hostess for a journey to Chepstow, where we were in hopes of finding a house that would suit us, and where we might with pleasure receive the visit of one whose presence like the sun would make happy those who beheld her. Your letter damped the joy I felt from reading it, by seeing that you could not come to us this summer, for I had hoped tho' we had left Nangwylt that we should have been sure of a visit from you. However, I will say no more about it, as you must be the best judge of your own affairs, and I doubt not that were we to draw you from your own country we should be the means, tho' innocently, of depriving many of your unfortunate countrymen of that relief you know so well how to bestow. I will say this though I am a loser by it. Continue, oh amiable woman, the path marked out to thee by virtue and humanity, and let not the whisperings of selfishness in us take thee from so laudable an undertaking. We may yet meet ere this world shall close our eyes, and that we both desire it our hearts are the best judges. I will now tell you how we came into Devonshire. We arrived at Chepstow. We found the house not half built, and by no means large enough for our family. I did not regret it, as the country was by no means beautiful. We then proceeded into this country, and came to this place on our way to Ilfracombe, and the beauty of it has made us residents here for the summer months, when we think of going to London for the winter. It combines all the beau-

* The writing, except that in xvi, was beautifully clear and legible. There was not an erasure or alteration. The spelling was perfect. Where necessary and possible, dates from the postmarks have been supplemented in brackets. I, ii, xxi, xxii, xxiii, were written on note paper, vii and x, on folio paper, the others on letter paper, of various makes, mostly gilt-edged. xii and xvi were originally closed with a red seal "Truth," xvii with "Harriet" in German text, the others with wafers and seals of different colors and patterns, but no device. I. is simply addressed "Mrs. Nugent," ii "Mrs. Nugent, 101 Grafton St.," iii to xi "Mrs. Nugent, No. 101 Grafton Street, Dublin, Ireland"; xii to xxiii, with the exception of xix, "Mrs. Nugent, No. 101 Grafton Street, Stephen's-Green, Dublin, Ireland." The "101" or "No. 101" was generally in the lower left-hand corner of the address. I. and ii were evidently delivered by hand, xii was franked "Glasgow," xxi "Geo. T. Beresford." The rest passed through the post as ordinary paid letters. Occasional holes in the paper, obliterating words, generally arose from seal or wafer tears.

*I can find no reference in contemporary papers to elucidate this word.—A. W.

ties of our late residence with the addition of a fine, bold sea. We have taken the only cottage there was, which is most beautifully situated, commanding a fine view of the sea, with mountains at the side and behind us. Vegetation is more luxuriant here than in any part of England. We have roses and myrtles creeping up the sides of the house, which is thatched at the top. It is such a little place that it seems more like a fairy scene than anything in reality. All the houses are built in the cottage style, and I suppose there are not more than 30 in all. We send to Barnstaple for everything, and our letters come but twice a week. It is 18 miles from Barnstaple, therefore one ought to be able to [paper torn] very well on a horse to get there. We have an immense prcipice to descend into this valley, about 2 miles in length, which no carriage can come down. It seems as if nature had intended that this place should be so romantic and shut out from all other intercourse with the neighboring villages and towns. We have still our Irishman Daniel, whom you may remember in Grafton Street. I am afraid we shall be obliged to part with him, as we do not find him that useful servant we expected he would have [*sic*] Percy has some thoughts of sending him to Dublin, to see after his poems that are at the printers; but whether he will or not is impossible to say. We have not heard from Mr. Lawless now for some time. I suppose his present employment to my idea not very laudable, fills up his time so much that he cannot think of his absent friends. I hope this is not the case as I should be sorry, knowing him to be an Irishman, if it were true. I think he is a man of very great talent and abilities; but I am afraid that Mr. Curran will never lend him a helping hand. I must now say adieu, my dear friend, and may you ever feel that happiness which springs from conscious integrity and goodness of heart. Percy and Eliza desire to be most kindly remembered, and believe me ever your truly sincere and affectionate friend

HARRIET.

VII.—Harriet Shelley to Catherine Nugent.

LYNMOUTH, August 4th [1812]

My dear Mrs. Nugent

Your affectionate letter gave us very great pleasure. To hear from those we love when it is not in our power to see them constitutes one of the greatest joys in existence. You may suppose how we laughed at the idea of the tempter, tho' how such a horrible looking creature should gain admittance to the garden of Eden at once surprises me and turns the sanctity of the whole into a burlesque. I suppose the ingenious discoverer has very good reasons and arguments to support his cause, tho' we may doubt if we like, the idea is truly ridiculous and laughable and how do the people take this new mode of accounting for how all the sin in the world arose. Will they believe it as soon as they would the other? If they do I should be inclined to think their belief is a mere matter of form and not an involuntary act. If they go on in this way we shall next hear, I suppose, of its being a bear or lion or anything else. I thank you in Percy's name for your kind offer of service, though at the same time we cannot accept it. The case is this. His printer refuses to go on with his poems until he is paid, Now such a demand is seldom made, as printers are never paid till the profits arising from the work come in, and Percy agreed with him to this effect, and as long as we staid in Dublin he wore the mask which is now taken off. However I am in great hopes that Mr. Lawless will get them from him. He is coming to London on business and then we shall see him. I wish to think well of him because he is your countryman, tho there is too much "the man of the world" about him. Perhaps he is different out of the city. If not, I shall still admire his talents, tho I shall have no high opinion of him. What do you think of Cobbett? A man that can change his opinions so quickly I do not admire, and particularly when he could write of Sir F. Burdett in such an abusive and contradictory a way. It seems to me that Cobbett merely changes his sentiments as occasion requires as best suits his interest. I hope I am mistaken, tho his behaviour looks very like it. Percy has sent you a defense of D. F. Eaton. It must not be published, but you will give us your opinion of it. What think you of Lord Stanhope?—divine being, how beautifully he speaks. We have sent him one as well as Sir F Burdett. Did you see a clergyman enter into his defence? I do not remember his name, but it was a very wonderful thing to hear a clergyman write for universal toleration. He said his standing in the pillory was an honour to him. I think the publick mind is very much in favour of Mr. Eaton. It looks well, does it not? Our friend Miss Hitchener is come to us. She is very busy writing for the good of mankind. She is very dark in complexion with a great quantity of long black hair. She talks a great deal. If you like great talkers she will suit you. She is taller than me or my sister, and as thin as it is possible to be. I hope you will see her some day. I should think that next summer you might take a peep at us. You may judge how much we all wish to see you. Your being an Irishwoman must interest us in your happiness independently of our knowing the amiable qualities you possess. I have read Miss Owensons "Missionary" and much do I admire the author. I am now reading her "Novice of St. Dominick." I regret not having known her when I was in Dublin. Her patriotic sketches have won my heart. She speaks so feelingly of your dear country that I love her for that. Miss Hitchiner has read your letter and loves you in good earnest. Her own expression. I know you would love her did you know her. Her age is 30. She looks like as if she was only 24 and her spirits are excellent. She laughs, and talks and writes all day. She has seen the Godwins and thinks Godwin different to what he seems, he lives so much from his family, only seeing them at stated hours. We do not like that; and he thinks himself such a very great man. He would not let one of his children come to us, just because he had not seen our faces. Just as if writing to a person in which we express all our thoughts, was not a sufficient knowledge of them. I know our friend whom we call *Bessy* just as well when we corresponded as I do now. Such excuses sit not well upon so great a literary character as he is. I might have expected such an excuse from a woman of selfish and narrow mind, but not from Godwin. I must now finish. They all unite in love and affection to our dear little Irishwoman, and believe me more than ever your sincerely attached and affectionate friend

H. S.

VIII.—Harriet Shelley to Catherine Nugent.

LYMOUTH, August 11th [1812.]

My dear Mrs. Nugent,

Your friend and our friend *Bessey* has been reading pieces of Irish history and is so much enraged with the characters there mentioned that nothing will satisfy her desire of revenge but the printing and publishing of them to exhibit to the world those characters which are (shameful to say) held up as beings possessing every amiable quality, whilst their hearts are as bad as it is possible to be. They will be shown to the world in a new light, and it will remain to be seen if that world does not repay them as they so eminently deserve. Percy thinks of printing it by subscription. 500 subscribers at seven shillings each will amply repay the printing and publishing. Percy intends to print some proposals for printing Pieces of Irish History, saying that every one whether Irish or English ought to read them. We depend upon you for many subscribers, as being upon the spot where so many of your exalted and brave countrymen suffered martyrdom. I should think there were very many would be glad to put their names to it. There must be many still smarting under the wounds they have seen their brave companions suffer, and all from this hated country of mine. Good God, were I an Irishman or woman how I should hate the English. It is wonderful how the poor Irish people can tolerate them. But I am writing to one who from her example shows them how they ought to tolerate this barbarous nation of ours. Thank God we are not all alike, for I too can hate Lord Castlereagh as much as any Irishwoman. How does my hearts blood run cold at the idea of what he did in your unfortunate country. How is it that man is suffered to walk the streets in open daylight! Oh if I were to meet him I really think I could fly at him, and tear him to pieces! I have drawn a likeness of him and Percy says it is a very good one. You know I have no pretensions to drawing; but sometimes I take up the pen and sketch faces. I have not preserved the horrible countenance but if I were to meet it I should it for him [*sic*]. I cannot bear Curran what use is he to your country? Was he active at the time of the Union? No! if he had been, tho' his life had been the sacrifice, Ireland would have been saved. I have no patience with Curran. I shall convert Mr. *Lawless* I hope from his *idol*. It is too sickening to hear him talk of Curran as he does. We are going to the valley of Llangothlin. It is much nearer to Ireland than we are here or even at Nangwylt. If we are there next summer I hope we shall see you. Bessy wishes very much to see you. Your last letter won her heart instantly Reading "Pieces of Irish History" has made her so low spirited. She possesses too much feeling for her own happiness. I am in great hopes she will get the better of her low spirits. May I ask how are your spirits and your health. If they are but as good as I wish them to be it will make me very happy. You do not let your feelings get the better of your reason If you do I am extremely sorry, as I shall know from that you are not as happy as you ought to be. They all unite in the kindest regards to the dear little Irishwoman, and believe me most sincerely your attached friend

H. S.

[Note added by P. B. Shelley.]

I shall print proposals for publishing by subscription, and if you could send us any names you would much benefit the *cause*. We determine at any rate to publish the Irish History. It is a matter of doubt with me whether any bookseller will dare to put his name to it. This will be no obstacle.

IX.—Harriet Shelley to Catherine Nugent.

LEWIS'S HOTEL, ST. JAMES'S STREET, LONDON [undated, 1812].

My dear Mrs. Nugent

You will smile at my address, wondering how and where we have been during the long interval which has taken place since the receipt of your last letter. I believe I mentioned that we were going to the Vale of Langothlin there to remain at least for the winter season; but I know not how it is that whenever we fix upon any particular place of residence something comes to take us to another. Instead of going to Langothlen we went to a New town which is called Tremadoc. It is built upon land that has been saved from the sea by a Mr. Madock, M.P. for Boston. The character of this man is such as to call forth our warmest admiration and esteem. He is what we call a true *patriot* in every sense of the word. He loves his country dearly and always stands up for the interests and welfare of the poor. He is building an embankment which does honour to him and is an ornament to his country; but unfortunately possessing only a small fortune, when compared with the immense sums that others possess, he has not sufficient to finish the undertaking which has cost him 12 years hard labour. We came up to London in the hopes of raising a subscription that would finish; but as yet nothing is done. Bysshe's being a minor lays us under many unpleasant affairs and makes us obliged to depend upon in a great measure the will of others, in the manner of raising money, and without which nothing is to be done. We have seen the Godwins. Need I tell you that I love them all? You have read his works therefore you know how you feel towards the author. His manners are so soft and pleasing that I defy even an enemy to be displeased with him. We have the pleasure of seeing him daily, and upon his account we determined to settle near London. For long journeys do not agree with him, having never been in the habit of travelling when a young man. There is one of the daughters of that dear Mary

Wolstoncroft living with him. She is 19 years of age, very plain, but very sensible. The beauty of her mind fully overbalances the plainness of her countenance. There is another daughter of hers, who is now in Scotland. She is very much like her mother, whose picture hangs up in his study. She must have been a most lovely woman. Her countenance speaks her a woman who would dare to think and act for herself. I wish you could share the pleasure we enjoy in his company. He is quite a family man. He has one son by his present wife a little boy of nine years old. He is extremely clever, and will I have no doubt, follow the same enlightened path that Godwin has before him. Godwin is particularly fond of Curran and I am to be introduced to Miss Curran on Sunday. How comes [or came] [paper torn] in England, can you solve this problem? You know that Mrs Godwin keeps a bookseller's shop. She conducts the whole herself. I am in great hopes she will succeed. They are sometimes very much pressed for enough ready money. They require such an immense capital; but taking every thing as it goes, I think they will succeed. The many trials that Mrs Godwin has had to encounter make me very much inclined to believe her a woman of great fortitude and unyielding temper of mind. There is a very great sweetness marked in her countenance. In many instances she has shown herself a woman of very great magnanimity and independence of character. Oh if you could see them all tomorrow. I am going to stay all day with them. G. is very much taken with Percy. He seems to delight so much in his society. He has given up everything for the sake of our society. It gives me so much pleasure to sit and look at him. Have you ever seen a bust of Socrates, for his head is very much like that? Percy, Bessey and Eliza desire to be remembered most affectionately to you. Percy says he wishes you to go to Stockdales, and get all his manuscript poems and other pieces. I am afraid you will be obliged to use a little manœuvre to get them In the first place you can say you wish to look at them, and then you may be able to stout them away from him. I leave it all to you, knowing you will do your best, in the way to obtain them, and believe me ever most sincerely your attached friend H. Shelley.

P. S. If I have said anything wrong pray forgive me.

X.—Harriet Shelley to Catherine Nugent.

Stratford upon Avon
November 14th [1812]

My dear Mrs. Nugent

My last letter to you was from London, which place I left on Friday the 13th, and am now on my way to Tunyralt our beautiful Welsh cottage. The reasons of your silence I am at a loss to account for. Unless your answer has not been delivered to me, a circumstance not at all impossible, considering the hotel we lodged at. Do not think from this that we are backward in our enquiries every day respecting letters. They are and always will be the first objects of our solicitude, when coming from so dear a friend as yourself. The lady I have so often mentioned to you, of the name of Hitchener has to our very great happiness left us. We were entirely deceived in her character as to republicanism, and in short everything else which she pretended to be. We were not long in finding out our great disappointment in her. As to any noble disinterested views it is utterly impossible for a selfish character to feel them. She built all her hopes upon being able to separate me from my dearly loved Percy, and had the artfulness to say that Percy was really in love with her, and it was only his being married that could keep her within bounds now. Percy had seen her once before his marriage. He thought her sensible but nothing more. She wrote continually, and at last I wrote to her, and was very much charmed with her letters. We thought it a thousand pities such a mind as hers appeared to be should be left in a place like that she inhabited. We therefore were very urgent for her to come and live with us; which was no sooner done than we found out our mistake. It was a long time ere we could possibly get her away, till at last Percy said he would give her a £100 per annum. And now thank God she has left us never more to return. We are much happier now than all the time she was with us. Have you been able to get the poems from Stockdale? If not it cannot be helped, but do pray write to us, for we are quite uneasy at not hearing from you for so long a time. Direct your letters to me at Tunyralt, near the town of Tremadoc (in Carnarvonshire, North Wales). It is 260 miles from London, but the loveliest place I have seen many a day. We are not very far from Ireland. If you could so manage it as to come to us in the Spring, you know not the happiness you would confer upon our little circle, which is now just as you beheld it in your own native air. I have got the Irish Melodies, which I intend to study. If you know of any good old Irish song I should esteem it a favor to hear of it. I must now say adieu, and believe me truly your affectionate friend

H. S.

Percy and Eliza desire not to be forgotten.

Alfred Webb.

Correspondence.

TWO KEYNOTES TO CIVIL-SERVICE REFORM.

To the Editor of The Nation:

Sir: I think that no one can have read your paper for the last few months without a conviction that civil-service reform in this country has proved a failure; that, notwithstanding the elaborate organization of the Civil-Service Commission, the political pressure for offices, if not as extensive, is just as great as ever; that how far it is yielded to depends entirely upon the personal character of the President; that even such resistance as was made by Mr. Cleveland showed almost superhuman resolution and strength of character, while the ordinary occupants of the Presidential chair which our system produces, would bend before it like a reed before the tempest; that public opinion cannot be kept up to the constant strain necessary to secure even partial success; and that there are signs that even the Civil-Service Commission, with its complete absence of public responsibility, may in time become the corrupt instrument of the spoils system.

There is no sweeter phrase which the human mouth can utter than, "I told you so," but I hope it is less in this spirit than for the lesson to be derived, that I refer to the fact that, from the outset, I have steadily maintained that this would and must be the result. So long as public office means not something to do, but something to get; as all leadership and individuality are absent from public life; as politics are built up from below and not guided from above; as nominations, and therefore elections, are made by anonymous bodies worked by trading wire-pullers, the people having no voice in and knowing nothing about the matter; as the elected do their work secretly, freed from responsibility, and therefore debarred from the possibility of honor and credit and the risk of personal condemnation—so long will no human force be adequate to prevent the offices from being used as the tools in the political game. The only way to prevent the President and the heads of departments (who, be it observed, hold full power in their hands) from joining in this game, is to make it cost them more to yield to than to refuse the office-seekers. This would be the case if these heads of departments had to stand up daily before a body of several hundred men, and therefore before the whole country, and were open to individual question and answer. A half-dozen determined civil-service reformers could make it so hot for them that before long they would rather beat off a whole tide of office-seekers than encounter such an ordeal.

It seems as if the sarcasms of such a paper as *Puck* must make the most thick-skinned wince; but they are seen by comparatively few persons and have no weight of authority. The same strokes would have a very different effect if applied in an arena towards which every eye in the country was naturally turned, and would be under such circumstances, with greatly increased interest.

It is a curious illustration of how political problems are repeated in national and local affairs, that your last number contains an attack upon Mayor Grant for filling the offices with the Tammany Democracy. The law of November, 1884, gave to the Mayor of New York the absolute power of appointment without confirmation by the Aldermen. It thus greatly increased the possibilities of good government by a good mayor without corresponding gain in the case of a bad mayor. The security should be precisely the same as with the general Government. If the Board of Aldermen, now apparently stripped of all functions except those of intrigue, were converted into a body of independent critics before whom the Mayor and his officials were compelled constantly to appear to make answer to individuals, the whole people of the city would be led to form an opinion of their Mayor, and to take an interest in electing the right man.

In a government by public opinion two things are necessary: first, that public opinion should be informed, and, secondly, that it should be brought to bear. And these things, again, are to be arrived at through two principles which, in our present organizations, are conspicuous by their absence—somebody to be responsible, and somebody to enforce responsibility. This is the keynote to civil-service or any other reform.

G. B.

Boston, June 1, 1889.

To the Editor of The Nation:

Sir: I enclose, in the form of a clipping from the Chicago *Journal* of May 18, a specimen of the sort of enlightenment this community obtains on the important subject of civil-service reform from one of its leading apostles of advanced thought, and a professed idealist at that, Prof. David Swing. The *Nation* alone, it seems to me, could so handle the rich material contained in this curious contribution to a discussion which I had hitherto regarded as advanced at least to the dead point where theoretic argument is exhausted, as to bring out the ludicrous aspect of this professorial plea for the better and more perpetual establishment of a government of offensive partisanship, by offensive partisanship, and for offensive partisanship.

Prof. Swing appears to be pretty well pleased with the election of Gen. Harrison to the Presidency, and yet he does not bear himself as a contented and satisfied Republican ought. He toys with the vice of Mugwumpery to the extent of being afraid that Mr. Harrison "can easily resist the pressure of the abstract truth that the President should, on entering his office, cease to be a politician." On the other hand, he has had some vexatious experiences with the business working of the Chicago Post-office (which of us has not, I should like to know?), and this has satisfied him that "the Civil-Service Law has proved itself to be one of the failures of the age." He is alarmed lest a too scrupulous observance of its spirit prevents the clean sweep of which he sees the necessity; for "its cardinal idea was to make an infant-school of the nation, to which school green

persons could be sent four years to be prepared for a second four years." Incompetency and illiteracy, protected by the Civil-Service Law, are everywhere battening on the emoluments of public office; eminent men are remaining abroad in our diplomatic service more than four years, to the great detriment of their country and patriotism, forgetting the simple republicanism to which they were erst inured, and acquiring a distaste for homespun American joys. "The average old-timer at Washington should be permitted to return to private life. He has become a part of a machine. His long term has not made him into a statesman, but into a boss." The outs are as bad as the ins, or worse—not because a large proportion are totally unfit and untrained for the offices they seek, and which the present incumbents do not particularly adorn, but rather because "all the men who, having served under Grant or Arthur, were discharged by Mr. Cleveland, are back now seeking office again under the new President." Such a spectacle of greed is indeed revolting! "Office-seekers, as a class, are a type of manhood that should be broken up."

The curve of Prof. Swing's thought presents a remarkable series of osculations with the perverse Mugwump doctrines he has condemned. It is the remedy for this state of things proposed by him that is radically different from anything the civil-service reformers have yet thought of. This is no less than "a Constitutional provision that should make all Federal offices expire at the end of four years, and never be renewable again to the same man." "Men who have served one term should be retired for ever." "Others just as capable and just as worthy are waiting." "That law would end 'offensive partisanship,' because a large amount of the vice of Presidential campaigns comes from the frantic efforts of those in office to remain in, and from the money raised by assessing those who are drawing salaries from the Nation."

In other words, we here have the edifying spectacle of a prominent literary and journalistic expounder of moral questions, a clergyman and a professional teacher, contending, ostensibly in the interest of efficient and decent government, for the principle that public office is a national feeding-trough, from which a Constitutional provision is to drive away greedy hogs, at the rate of 25,000 a year, in order that other animals may have their turn at the hog-wash. "No citizen should monopolize what honor there may be on the hands of the country to give to worthy sons."

I have long followed Mr. Swing's utterances with an unusual interest—an interest strengthened by the personal incident of having been his successor in one of the classical recitation-rooms at "old Miami" University—and with considerable sympathy. It is, therefore, as a representative of a portion of his audience whose prejudices are altogether in his favor that I would say to him: If such a political ideal as this, even though tempered by the highly practical collateral suggestion that "offices should be filled up by a process of selection in which the man selected should play no part," is the logical outcome of your idealism, we shall be compelled to look around us for an idealism of a totally different type.

Respectfully, ALFRED EMERSON.

LAKE FOREST UNIVERSITY, ILL., May 30, 1889.

BALLOT REFORM IN OHIO.

TO THE EDITOR OF THE NATION:

SIR: In your recent enumeration of States where progress in ballot reform had been made, you failed to include Ohio, whose Legislature passed a local bill applicable to this city, providing for the printing and distribution of election tickets at public expense. A bill embodying the Australian plan for the whole State was introduced by Senator Taylor of Bedford, but failed by a single vote.

Respectfully, L. B. TUCKERMAN.

CLEVELAND, O., May 28, 1889.

THE PROTECTION OF GOLD AND SILVER.

TO THE EDITOR OF THE NATION:

SIR: In No. 1246 of the *Nation* you say: "We have not yet put any duty on the precious metals, but is it not time to do so?" In an interview with Gov. Stanford by G. A. Townsend, published in the San Francisco *Examiner* a week or two prior to the Presidential election, Gov. Stanford advocated the protection of American silver. The Western protectionist brain can advance more purely tom-fool theories than are dreamed of in the effete East. Y.

"TRY *AND*."

TO THE EDITOR OF THE NATION:

SIR: Prof. Caskie Harrison says that "with past tenses *and* cannot take the place of *to*." If usage is to be taken as the standard (and usage is a hard master) in this, as in the other instances cited by him, his statement does not hold good, for, shortly after reading his letter in the *Nation* of May 23, I came across the following passage in Thackeray's 'Vanity Fair': "Nor did Dobbin try and convince him that Amelia's happiness was not centred in turtle-soup." Who would venture to assert that *to* was not the correct expression here, as in the other instances given? Indeed, Prof. Harrison's very argument as to why *and* should not be used with the past is the chief reason why it might. He says: "The past being the domain of fact only, the main event, once contingent, either did or did not occur." This would be ample justification for saying "he tried and did it," though every one will acknowledge that the preliminary "is no longer important as such." In other words, it is only after the trying is over that we can say whether the main event did or did not happen as the result of the trying. As to the stress laid by Prof. Harrison on the past as being the domain of fact, the generic present is also the domain of fact, for the generic present embraces the past, too, so that when you say, "I try to read a little every day," the trying has already begun, the statement holding good for all time.

The quotation from Cicero (De Or. I, xlvi) I have *tried to find*, but have not succeeded. The passage may be incorrectly located. I will *try to find* it elsewhere. If I *try and find* it, I shall feel amply compensated for having tried, but even as early an instance as that, in classic Latin prose, can surely prove nothing. It may be regarded as an early exemplification of a tendency that is indefensible. It is illogical, whatever the language may be in which it occurs, and ought to be expunged from all. Cicero himself was guilty of such things even at his best, and his most ardent admirers will scarcely attempt to say that his diction was always perfect.

R. L. PRESTON.

CENTRAL UNIVERSITY, RICHMOND, KY., May 29, 1889.

THE STANDARD OF PRONUNCIATION.

TO THE EDITOR OF THE NATION:

SIR: A few evenings ago I was at supper with a young physician from Glasgow. All of a sudden, apropos of nothing, he inquired, "What is the German for *yawt*?" "For what?" "For *yawt*, a boat." "Oh, you mean *yacht*. We call it *yŏt* in America." "Well, then, you are certainly wrong."

To avoid a dispute, I brought out a small pronouncing manual in which the various sounds of *o* are given, with three or four model words as keys to the pronunciation. We agreed in the pronunciation of all but two classes. *Wool, foot, good*, he pronounced *wule, fute, gude*. *Yacht* is transcribed *yŏt*, and the test words are *nŏt, ŏdd, resŏlve*, which he pronounced *nawt, awd, resawlve*. "So, you see," remarked he, "that you are wrong, even on the authority of your own book."

To this knockdown argument there was of course no reply; but in thinking over the affair since, I could not help asking myself whose pronunciation is to be taken as the standard in that golden age of the future when we shall all write "Glossic" or "Romic." Our spelling is without question a rock of offence and a stone of stumbling, but no inconsiderable obstacle in the way of reform is the inability to reach settled conclusions as to what sounds are in question. My friend from Glasgow makes no distinction of sound in pronouncing *not* and *naught*, *sot* and *sought*, *rot* and *wrought*. Ellis says distinctly that there is no fixed standard of English pronunciation, though there are several ways of pronouncing English correctly. Who is to settle the question for us, the Scotchman, the Londoner, the Bostonian, or the "boomer" from Guthrie City?

Respectfully yours,

WILLIAM EDWARD MEAD.

BERLIN, May 20, 1889.

TOLSTOI AND HIS TRANSLATORS.

TO THE EDITOR OF THE NATION:

SIR: I read in your issue of May 16 a letter from Mr. Nathan Haskell Dole, in which he takes the French translators of Russian novels to task for changing certain phrases and altering somewhat the meaning of certain sentences. Mr. Dole is the last one who should make such a charge. His translation of Tolstoi's masterpiece, 'Anna Karénina,' is almost totally spoiled by the omission of the greater portion of chapter xi., book ii. This chapter is the ethical key to the whole work. One gets an entirely different idea of the characters of Vronsky and Anna from that given in Mr. Dole's translation, when one reads in the French this marvellous presentation of the truth that the punishment of sin commences with the very act, and that to noble natures like Anna there is no delicious period of sinning before the inevitable remorse. Mr. Dole has not only cut out this perfect scene, but he has also, by introducing words of his own, endeavored to hide his fault, and make it appear that no omission was made. I suppose that he imagined he had saved his conscience by saying in the preface that he had omitted some scenes "in deference to our Puritan taste." People prefer the French translations because they expect to find there the whole work of the writer, not garbled to suit any "taste" whatever. The omission I have mentioned is not the only one of which Mr. Dole is guilty; they are only too numerous, and render his work valueless to any one who wishes to know the great Russian writer as he really is.—Yours, etc., WM. SCHUYLER.

3411 WALNUT STREET, ST. LOUIS, MO., May 24, 1889.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: May I make some corrections in the re-

port of the recent meeting of the American Oriental Society, which is found in the *Nation* of May 30? First, as regards the Manuscript Committee, its work is not so far advanced as would appear from the statement that over four hundred MSS. have already been examined. What the Committee reported was that, on the basis of returns from most of the public libraries, and from some private collections, the number of Oriental MSS. of all sorts in the country was estimated to be not less than four hundred. A rough classification, by languages, of the much smaller number the titles of which are actually in hand, was also presented.

The copy of Shihâb ed-Dîn's philological commentary on the Alfîya which I described is dated A. H. (*not* A. D.) 894, and the subscription fixes the composition of the work in A. H. 840. The copy of the commentary on the Alfîya which goes under the name of Ashmûnî is not dated, nor was any opinion expressed as to its age. So far from proving in my paper "that its authorship must be attributed to Ashmûnî," I held exactly the opposite opinion, viz., that the attestation which the three MSS. we know give to the current attribution, is not of a character to outweigh the explicit statement of Hâgî Khalfa that the author was Esh-Shumunnî. The Hebrew manuscript from the Andover Library was written in Southern Arabia, A. D. 1330, and contains a considerable collection of poetry, both liturgical and non-liturgical, but I should hardly say "chiefly for weddings, etc." Nordheimer is named in this connection by mistake.—Respectfully yours,

GEORGE F. MOORE.

ANDOVER, MASS., June 1, 1889.

Notes.

HOUGHTON, MIFFLIN & Co. will publish, in connection with Bickers & Son of London, an *édition de luxe* of Swift's Works in nineteen volumes, octavo. Only 250 copies will be placed on the American market. The reprint is after Sir Walter Scott's second edition. The same firm also announces 'The Beginnings of New England,' hitherto unpublished lectures by John Fiske; and 'Indoor Studies,' by John Burroughs.

G. P. Putnam's Sons will issue directly the first two volumes of Theodore Roosevelt's historical work, 'The Winning of the West.'

'Follies, Foibles, and Fancies of Fish, Flesh, and Fowl,' a small quarto collection of amusing pictures of animal life, about to be brought out by Frederick Warne & Co., will interest the admirers of Birket Foster as being the production of that artist's son.

Estes & Lauriat, Boston, are to be the American publishers of the annual photogravure record of the Paris Salon, whose text will this year be Englished.

Anson D. F. Randolph & Co. will publish immediately, by arrangement, 'Unknown Switzerland,' by Victor Tissot, translated by Mrs. Wilson; 'Fishin' Jimmy,' by Annie Trumbull Slosson, with illustrations; a new illustrated edition of Mrs. E. Prentiss's 'Stepping Heavenward'; 'The Imitation of Christ,' by Thomas Kempis, set forth in rhythmic sentences, according to the original intention of the author; and 'How They Kept the Faith,' a tale of the Huguenots in Languedoc, by Grace Raymond.

A new story by Robert Louis Stevenson and Lloyd Osbourne, with the title of 'The Wrong Box,' will be published by the Scribners in a fortnight.

From Macmillan & Co. we have volumes 13 and 14 of the author's edition of Browning's Poetical Works—the former containing "Aristophanes's Apology" and the "Agamemnon" of Æschylus; the latter, "Pacchiarotto," and other minor poems of the fruitful years 1876–1878.

A work of obvious utility makes its first annual issue as 'The Manual of American Water-Works,' compiled from special returns, edited by M. N. Baker, and published from the *Engineering News* office in this city. It appears to be a very excellent performance. Turning to Johnstown, Pa., the scene of Friday's appalling disaster from flood, we find mention of three reservoirs in addition to the lake which burst its bounds, all more than 150 feet above the menaced city, with its estimated 30,000 inhabitants.

Another beginning is the 'Handy Lists of Technical Literature,' a reference catalogue of books printed in English from 1880 to 1888 inclusive, besides a select list of books printed before 1880 and still procurable (Milwaukee, Wis.: National Publishing and Printing Co.; London: B. F. Stevens). Part I. deals with the useful arts in general; products and processes used in manufacture; technology, and trades. It is both an author (or title) and subject catalogue, under one alphabet, with cross references; an accompanying key explains the abbreviations of names of publishers and serves as a directory to their several publications in the catalogue, but is sold only to booksellers and librarians. This laborious work has been compiled with great intelligence, and with all the details needful for the student or the bookseller, by H. E. Haferkorn and Paul Heise. Six more parts are in preparation, and will cover exhaustively the field embraced in the general title.

Petermann's Mitteilungen for May contains articles on recent Danish explorations of Greenland, by H. Rink, on the Flora of Schleswig-Holstein, by Dr. E. Krause, accompanied by a map, and the first part of a description of a journey to the sources of the Tigris, by Prof. J. Wünsch. An account of Stanley's expedition, by H. Wichmann, calls attention to the extraordinary fact that not a letter nor even a message appears to have been sent by Emin Pasha through Stanley to his friends in Europe. There is an admirable map of the route taken by the expedition. The undiminished interest in Africa is shown by the fact that in the review of recent geographical literature there are noted 202 books and papers in scientific periodicals relating to this continent.

A school wall-map of the Persian and Macedonian Empires, compiled by Dr. Henry Kiepert, has just been issued by Dietrich Reimer, Berlin, in six sheets. It includes a side map of the kingdoms of Alexander's successors, and shows the routes of the Ten Thousand and of Alexander. The territory portrayed—or at least the Asiatic part of it—seems at some future date more likely to be labelled Russia than by any other name of modern political geography.

The Council-General of the Faculties of Paris has just made its annual report to the Minister of Public Instruction. During the academical year 1887–'88, the number of regular students at the University of Paris has risen to 10,320, a gain of 91 over the year before. Of these 886 were foreigners. The number of women students was 271, viz.: 2 in law, 117 in medicine, 16 in sciences, and 142 in letters.

In the last number of the quarterly publication of the Société des Amis des Monuments there is a note from an architect, M. Charles Durard, which conveys some curious information about the tomb of Montaigne. He says that the late M. de Tauzia of the Louvre bought some years ago of an old-iron man an ancient grille, which had evidently been part of a tomb, and bore upon it hatchments of sheet iron, repoussé, showing the arms of Montaigne. M. de Tauzia admired this greatly as one of the very finest works of the end of the sixteenth century, and was full of scorn for the municipality and the architect who had thrown away such a treasure. "But," goes on M. Durard, "this ancient masterpiece was made in 1846, after a design by your humble servant, at the time of the restoration carried on by my father. The name of the man who forged it was Chavanton, and one Cognard set it up."

The new Superintendent of the Census announces that Dr. John S. Billings, Surgeon U. S. Army, has consented to take charge of the Report on the Mortality and Vital Statistics of the United States as returned by the Eleventh Census. In default of any national system of registration of vital statistics, such as is relied upon by other countries for the purpose of ascertaining the actual movement of population, the Census Office is issuing to the medical profession throughout the country "Physician's Registers" for the purpose of obtaining more accurate returns of deaths than it is possible for the enumerators to make. The record should be kept from June 1, 1889, to May 31, 1890. Nearly 26,000 of these registration books were filled up and returned to the office in 1880, and nearly all of them were used for statistical purposes. Physicians not receiving Registers can obtain them by sending their names and addresses to the Census Office, and, with the Register, an official envelope (which requires no stamp) will be provided for their return to Washington. All information obtained through this source will be held strictly confidential.

—Mr. Grant Allen, who has recently written a book to show that he is not capable of comprehending the meaning which scientific men attach to such terms as energy and force, has settled the woman question in six pages, in a late number of the *Forum*. Women, he has discovered, have been "told off" from the race for the purpose of reproduction, and it is a subversion of the laws of nature for them to look forward to performing a more varied part in the human economy. As a reply to Prof. Lester F. Ward's paper on "Our Better Halves," this article is conspicuously inadequate. Prof. Ward wrote in support of two leading propositions—first, that there is no analogy between the subjection of women in modern society and the decorative superiority of males among birds and mammals; and, second, that, if the whole of organic nature be taken into account, the female sex is the main trunk and type of life, the male sex being, as it were, an *arrière pensée* of nature. Neither of these positions is affected by Mr. Grant Allen's reply. To deny the first it would be necessary to show that female birds and mammals are so exhausted by the reproductive function as to be obliged to depend upon the males for food, shelter, and protection from enemies, both for themselves and their young. Not a single fact is given to show that this is the case, and we can only conclude that none worth adducing are to be had. To deny the second, Grant Allen shows that various influences have tended to cause certain forms to be set apart for certain purposes, but the cases he cites are among the best that could be chosen in support of the view that the female is the important half of most species of animals. By a transparent *suppressio veri*, he fails to tell his readers that the working bee and the honey ant are structu-

rally females, and he does not give a single case where the whole female sex is exclusively occupied with reproduction.

—If we assume, as we fairly may for animals, that there are only two functions, reproduction and nutrition, and that superiority is measured by the degree to which a being exercises both of them, and especially the latter, then there are any number of cases in which the females are superior, and not one in which the males are superior. For even in mammals and birds that exhibit the greatest inequality in the sexes, all females perform both these functions, and are not only self-sustaining and self-protecting, but, in addition to this, are able to feed, shelter, and defend their young whenever they require it, for the most part unaided by the males. On the other hand, the differences which characterize the males have nothing to do with the nutritive function, are often a hindrance to it, are chiefly ornamental, often an obstruction to activity, and, when calculated to add strength, do so in a manner that is never applied, and cannot be applied, to supplying the body with nourishment, much less to furnishing it to dependents. From this point of view, the stag, with his cumbersome antlers to be grown and shed every year; the peacock, with his gaudy tail-feathers of no use in flight; and all the other male creatures having purely ornamental characters due to sexual selection, may be considered to be, to a certain extent, "told off" for reproductive purposes, while the females enjoy the normal exercise of both the reproductive and the nutritive functions. Both Prof. Ward and Grant Allen seem not to have given sufficient weight to the fact, amply made out by Galton, that father and mother are exactly equally concerned in giving children their qualities, the practical conclusion to be drawn from which is that not to give mothers the best attainable development, both from study and from the active exercise of such faculties as they may have, is to dwarf the human race of one-half the progress which each generation ought to insure it.

—*Artistic Japan*, a monthly journal of which the first year is nearly completed, is a publication in small folio, of Parisian origin, but with a good deal of English as well as French editing. It is announced as the publication of Mr. S. Bing, one of the most extensive dealers of Paris in Oriental art treasures, who has, or had a few years ago, a large establishment in the Rue La Fayette and another on the ground floor in the Rue de la Paix, and was a liberal contributor to loan exhibitions (New York, 220 Fifth Avenue). On the title-page a score of co-editors are named, and it is stated that the English edition is under the special control of Mr. Marcus B. Huish, President of the London Fine Art Society, and author of a little book recently reviewed in these columns, 'Japan and Its Art.' This publication, therefore, may be taken as a quite complete declaration of the European students of Japanese art as to their ideas of it. It is hardly necessary to insist on the difference that exists of interest between the European view of Japanese art and the Japanese view of it, nor upon the superiority of the latter. If it were possible for us to have and to understand a Japanese book or periodical by a competent author or editor upon this topic, it would be more difficult indeed to master, and the European reader would have to make some perceptible intellectual effort to put himself at the point of view taken by the Oriental; but the result would be immeasurably more instructive. On the other hand, the present work appeals to a much wider circle of readers and amateurs, and it will undoubtedly carry a feeling for the higher qualities of Japanese decoration to quarters where otherwise but little would be known of them. Each number appears to have one solid leading article. In No. 2, Mr. Gonse, the well-known author of the large and costly book, 'L'Art Japonais,' writes on "The Japanese as Decorators," an obvious subject for a "leader"; and in Nos. 2 and 3, Mr. Victor Champier gives an article on "Japanese Architecture," which is rather a misnomer, as there is very little attempt in it to analyze the building art of the Japanese, and the author contents himself with a few words about the peculiar heavy framing in wood which is a device to diminish the harm done by earthquakes, and goes on to interior decoration, and small details (such as the sculpture and ornamental piercings and accessories), which may be as well studied in Europe as in Japan. Apart from these articles, which are certainly cursory and hasty enough, the text seems to limit itself to the explanations of the plates, and leaves unexplained all that most needs explanation. The plates are of varied merit. The uncolored photographic reproductions are without sufficient sharpness and accuracy of outline and detail, and give no information to the would-be student. On the other hand, the reproductions of color decoration are very clever, the character of the soft half-tints affected by the Japanese being well rendered, and one or two plates of brocaded stuffs that we have examined furnishing what must be quite admirable facsimiles of the beautiful originals. There are a multitude of black-and-white illustrations in the text, all, or nearly all, facsimiled from Japanese originals. In short, the value of the publication is in its illustrations, and these may be very instructive to every person who is not the happy possessor of a large collection of treasures of Japanese art.

—The Halliwell-Phillipps Library is advertised to be sold by auction in the present month of June. Several of its curios were only discovered after long search by Mr. Phillipps late in 1888. Concerning one, "Wellobie, his Avisa," he says in the margin, "I bought this volume of Quaritch in November, 1888, for fifteen pounds." Regarding another, "Vince's Tour," No. 42 in the catalogue, he spoke in his very last letter to us as among his most recent acquisitions. Two others, at least, of the forty-seven gems chronicled in the catalogue were acquired by Mr. Phillipps in 1888. Noting that the Hollingbury Copse preciosities were no sooner gathered than scattered, we say "the wedding baked meats do coldly furnish forth the funeral tables." In the list of Shaksperiana now about to be sold, the *editio princeps* of Shakspere himself stands first. It deserves that proud eminence. That edition, published in 1623 and sold for one pound a copy, was sold in 1885 for a thousand guineas to N. Q. Pope of Chicago. The highest price before paid was £716 2s., in 1864, by Miss Burdett-Coutts. The book is so rare, and so large a proportion of its specimens are entombed in monumental libraries, that it seldom comes into market. Quaritch, offering one for sale this season, claimed that nothing like it had been purchasable for twenty-four years. In 1879 no more than thirty-seven sales of it, made since 1787, were known to Allibone. The copies in America may be counted on one's fingers. There are two in the Lenox Library and one in the Astor. We know of none in Philadelphia but that of Mr. Furness. In our catalogues of Massachusetts, New York, and Pennsylvania libraries, as well as that of Congress and of the New Dominion at Toronto, the city libraries of Cincinnati, St. Louis, Chicago, and San Francisco, it is wanting. The Phillipps copy was bought in 1867 for £410. That offered by Quaritch is priceless in his catalogue among thousands of priced books. In one point at least the Phillipps is a greater rarity than the Quaritch, and was no doubt an earlier impression. On p. 172 *and* is misprinted *add*, and *tis* for *kiss*. All other copies known, save that of the Earl of Ellesmere, were struck off after these blunders had been discovered and corrected. It is to be hoped that Mr. Poole, who is seeking for the Newberry Library in Chicago volumes that will be "prized above a dukedom," has secured for it one of those Kohinoors which, like the Sibylline books, are constantly becoming fewer, and, what is worse, are held at a fast-growing price.

—Buffalo Bill, with the Greatest Show on Earth ("l'attraction la plus grande du monde"), has arrived in Paris, and receives from the *Figaro* a welcome, two columns long, in which the French reporter fairly turns himself loose, and paints a picture which, in the breadth and freedom of its handling and its frank gayety of color, recalls the earlier, or the earliest, manner of our own Mr. George Alfred Townsend. When the brilliant newspaper-man goes out to meet the incoming ship, he says:

"Le *Persian-Monarch* ralentit son allure pour nous donner le temps de virer et de nous remettre en marche de conserve avec lui. Pendant ce temps, la musique de Buffalo-Bill, qui s'est rassemblée à la hâte, exécute le *Yankee Doddle*, l'air national américain.

"—Vive la France! s'écrient les passagers du *Monarch* aussitôt l'air fini.

"—Vive l'Amérique! répondons-nous.

"Nouvelle musique—la *Marseillaise* cette fois."

Then he describes, always brilliantly, *le colonel* Cody, and Red Shirt, and Gabriel Dumont, Riel's lieutenant in Manitoba, who very singularly has a French name, and the Sioux "des tribus des Cutoïs, Arapahœ, Brulay," and afterwards he is presented to "Miss Annie Oakley, la fameuse 'reine du Riffle' américaine, qui tire la carabine et le pistolet comme Ira Paine." But, after all, it is the noble savage that impresses him most deeply:

"Quant aux Peaux-Rouges, ils se promènent majestueux et fiers. . . . Seulement, comme j'ouvre mon porte-cigarettes, vingt mains couvertes de tatouages se tendent vers l'étui. Je fais un signe affirmatif. En un clin d'œil, le porte-cigarettes est vide.

"Il est vrai que je suis récompensé par des *owah! owah!* de satisfaction.

"Et maintenant," he says in ending, "souhaitons à tous la bienvenue, aux Canadiens si français par le cœur, aux Peaux-Rouges, aux Américains et, comme on dit dans leur pays: *Let her go Galeghear!*"

—On May 12 there passed away another of the great generation of Russian writers, Mikháil Yevgráfovitch Saltykóff, who wrote under the name of Stchedrin. The son of a well-to-do noble in the province of Tver, he was born in 1826, and, after finishing his education in the Lyceum of Tsarskoe-Selo, "that nursery of statesmen," entered the chancery of the Minister of War. The two first stories which he wrote, innocent as they were, excited displeasure, and he was transferred to Viatka on the edge of Siberia, where he was attached to the Governor. It was not till 1855 that he obtained permission to return to St. Petersburg, but he continued in the Government service till 1863, reaching the rank of actual State Counsellor, equal to that of major-general. He was thus able to acquire a wide knowledge of Russian administration and Russian administrators. In 1856 he published his 'Provincial Sketches,' satirical, humorous, pathetic, a book which created a great sensation and settled his

literary reputation. With the poet Nekrásoff, he edited the *Annals of the Fatherland* from 1868 until it was suppressed in 1884, and gave himself entirely to satirical writing. His books, whether mere sketches or in the form of novels, were devoted to the exposure of venality, corruption, and wrong-doing in every class of life; the denunciation of reactionaries and theorists, and of the abuses which even reform made possible. In order to write freely, he was obliged to develop a terminology of his own, and even then many of his best things have probably never seen the light. It is told of him that on one occasion he printed a piece of arrant nonsense, subsequently explaining that this was a specimen of the only kind of stuff that the censors would permit him to publish. The books by which he is best known are 'Tashkentians' and 'Male and Female Pompadours.' His Tashkent has nothing to do with Central Asia, but lies everywhere, and his Tashkentian is a synonym for a diffuser of enlightenment who has no education or basis of his own, a civilizer for the personal and practical advantages to be obtained by the work. Curiously enough, Tashkentians in this sense are as numerous in Am rica as in Russia, though here they are called "men sound on the main question." "Pompadours" are, however, rarely to be found out of Russia. This term immediately hit the popular sense. It is impossible to translate it, but a short journey in the interior of Russia, with proper introductions to the authorities, would soon enable one to comprehend its meaning. As a satirist, Saltykóff will stand in the first rank of the world's literature, and his death is to be deplored, although for some time past he had written little or nothing.

THE WAR HOSPITAL.

My Story of the Civil War. Narrative of Four Years' Personal Experience with the Sanitary Service of the Rebellion. By Mary A. Livermore. Hartford: Worthington & Co.

The Other Side of the War: With the Army of the Potomac. Letters from the Headquarters U. S. Sanitary Commission in 1862. By Katherine Prescott Wormeley. Boston: Ticknor & Co. 1889.

"INASMUCH as ye have done it unto the least of these, ye have done it to me." Eloquent sermons have been preached from this text, but we question if any have made a deeper impression than will the perusal of the books whose titles are given above. They contain an account of the work of some noble women who, by precept and example, did much to tinge with silver the dark clouds of the war. Mrs. Livermore's story is a sharp photograph of a phase of war in which the virtues of patience, faith, hope, charity, and mercy were practically applied. Commencing with the first gun at Sumter, she outlines the progress of events to the assassination of Lincoln, dwelling upon the work of the Sanitary Commission as it came under her notice during a close acquaintanceship with the horrors of war. Seldom does one meet with so rich an experience of human nature. The reader must be made of stern or indifferent stuff who can peruse this book without having his heart deeply stirred. If an American heart, it must throb with pride at this fresh revelation of heroism—the heroism of the forlorn hope in the face of lingering disease and horrible mutilation.

A marked feature of the work of the Sanitary Commission, in the light of Mrs. Livermore's story, was the wonderful executive ability of many of its gentle representatives in the field. Duties pertaining to half-a-dozen of the great administrative departments of the army were performed with a mingled intelligence, tact, and force that was simply irresistible. Before this new power, red-tape, custom of service, bad roads, want of transportation, as obstacles to prompt succor of the sick and wounded, were promptly brushed aside. The official preference expressed for the Catholic sisters as nurses in hospitals, which is alleged to have existed at an early period of the war, and the reasons assigned for it, are interesting:

"'Your Protestant nurses are always finding some mare's-nest or other,' said one of the surgeons, 'that they can't let alone. They all write for the papers, and the story finds its way into print, and directly we are in hot water. Now the "sisters" never see anything they ought not to see, nor hear anything they ought not to hear, and they never write for the papers; and the result is, we get along very comfortably with them.'"

The gentle and untiring ministrations of the sisters of the Catholic Church are gratefully remembered by thousands of veterans. Their traditions restricted them in the performance of duty to narrower limits than their Protestant colleagues observed; but, as Mrs. Livermore shows, there were cases of incompetency or inefficiency in the medical administration of the vast Union army not to be reached by ordinary operation of the law or orders, and the resources of the North would often have failed to save life had there been none but the regular channels. Hence, as we are told, "the Protestant sisters carried the day, chiefly because of their good sense and worth, and hundreds went to the front before the end of the war, welcomed by both surgeons and patients, and rendering valuable service."

Of such was Mother Bickerdyke, who came of Revolutionary stock, and whose grandfather crossed the Delaware with Washington; but the record of her gallant ancestor pales before the remarkable achievements of this woman, who was a terror to incompetent or dishonest hospital officers, an organizer of relief for sick and wounded, a tender and untiring nurse even upon the battle-field. There is a suggestion of Ethan Allen in her reply to the Medical Director who found her at the rear of a corps after a day of fighting, wearing a Confederate overcoat, and a soft felt hat, and surrounded by camp kettles of soup. Said he: "Madam, you seem to combine in yourself a sick-diet kitchen and a medical staff. May I inquire under whose authority you are working?" Without pausing in her work, she answered: "I have received my authority from the Lord God Almighty: have you anything that ranks higher than that?" Want of space forbids further reference here to the good woman who was trusted by Grant and Sherman, and loved as a mother by hundreds of soldiers, to whom she had given in their hour of need more than a cup of cold water.

The practical workings of the system of voluntary aid in war-time are thoroughly illustrated by a series of anecdotes, from which we make one or two extracts. In the course of her labors with the army before Vicksburg, Mrs. Livermore found in hospital twenty-one soldiers whose cases were pronounced incurable. Owing to the loss of their descriptive lists, stringent orders regarding furloughs, etc., there was no prospect of relief through the regular channels. The surgeons sympathized, but had exhausted official means. Armed with certificates, the gentle missionary boarded Gen. Grant's headquarters boat, and, reaching the main saloon, was told to pass behind a certain curtain-screen at one end. She says:

"I obeyed, and through the blue haze of a cigar-smoke curling through the apartment, I saw Grant sitting at the table, wearing his hat, a cigar in his mouth, one foot on a chair, and buried to his chin in maps, letters, reports, and orders. Whatever *mauvaise honte* I may have felt in thus obtruding myself upon the modest General was speedily banished by his discomposure. For the moment he seemed the most bashful man I had ever encountered. Rising and placing a half-dozen chairs at my service, he begged me to be seated, removing his hat and taking his cigar from his mouth, and then quickly and unconsciously replacing both. I remained standing, and, without any circumlocution whatever, announced my errand and implored his aid. He heard me without interruption. 'But these are matters which should be laid before my Medical Director. I have put all these things out of my hands,' were his first words. Yes, I knew that, and told him so, and I also told him that it was necessary for some one to cut red tape boldly and promptly in behalf of these men; that no subordinate dared do it, but all said he could, and encouraged me to believe that he would; and I besought him, with the earnestness that women felt in these sad cases during the war, to give me the pleasure of restoring these boys to the mothers and sisters and wives, who would lighten with love the dark valley of death into which they were fast descending. I promised, if he gave them discharge and transportation, to take every man to his friends, leaving no one of them until I saw him well cared for. The General briefly examined the documents I gave him, and then said he would let me know to morrow what could be done.

"The next evening an officer of his staff came to our boat and . . . made me supremely happy with the discharge of these twenty-one soldiers. But if I was happy, what shall I say of the poor emaciated fellows who looked for my return to them as one looks for a reprieve from sentence of death? Most of these men were brought North on our sanitary boat. One of them died on the way, and was buried at Memphis, and another died in Chicago; his home was in Wisconsin, and a ride of four hours more would have taken him to the arms of his mother, who was expecting him. But when we reached Chicago, Saturday evening, the train for his town had left, and he was compelled to remain in the city over Sunday. I took him to the hotel near the station from which he was to start on Monday, and when I had seen him comfortable in bed, wished to leave him to telegraph his mother of his nearness to her, and then go to my own family. I promised to send him a nurse in less than an hour and to accompany him home to Wisconsin myself on Monday; but he begged so mildly that I would return myself and stay with him that I consented. . . . He followed me to the door with his beseeching eyes, saying, 'I hate to have you go, for it seems as if I should not see you again.' . . . In less than two hours I was back at his bedside. 'He has been sleeping quietly ever since you left,' said the servant. There he lay as I had left him, with one hand under his head, his face towards the door, that he might see any one who entered the room, sleeping—yes, the sleep of death."

On another occasion she visited a large field hospital containing nearly two hundred men in various stages of chronic disease. They were soon to be sent to St. Louis, but as their only diet had been army rations, it was doubtful if many could stand the journey. Mrs. Livermore says:

"It was a miserable place, although, at that time, and in that locality, the best probably that could be done. The cots were placed inside the tents, on the unplanked ground. The soil was so dropsical that wherever one trod it sank under one's weight, and one immediately stood in a little pool of water. The legs of the cots stood on small square pieces of board, which alone kept them from sinking into the moist earth. The weather was as warm as July in our climate, although it was April, and the atmosphere was dense with gnats, small flies, and every other variety of winged insects. The hospital swarmed with large green flies, and their buzzing was like that of a beehive. The men were hushed to the stillness of death. They had been sick a long while, and had utterly lost heart and hope. Many of them did not even lift their hands to brush away the flies that swarmed into eyes, ears, nose, and mouths."

Into this veritable hotbed of disease and despair entered Mrs. Livermore with good cheer in word and deed. She first aroused the poor fellows with promise of immediate removal North, and then tried to stimulate their appetites with delicacies of which she had an abundance. She commenced with one patient by making tea, out of a small tea-pot, with the following result:

"A hundred pair of eyes had been watching these preparations, and as I set the tin cup of tea and tin plate of toast on the camp stool, I received a score of orders from neighboring beds for some tea and toast 'just like that 'ere.' Crowding his knapsack and pillow behind him, I propped up the forty-five-year-old 'boy' to whose uncertain appetite I was catering, and invited him to taste his 'special diet.' As he tasted, a sickly smile distorted his then ghastly face, which was succeeded by a fit of weeping, his tears literally mingling with his drink. 'Is it good?' I asked. 'It's—proper—good—just—like—what my wife makes'—with the drawl of long sickness and great weakness. I had got into business. 'Tea, tea, tea, with white sugar and milk in it'—was the cry that came up from every bed. I undertook to make tea by the wholesale in the inevitable camp kettle, in which soldiers make tea, coffee, soup, and cook everything. But no, they would have it from my home-spun tea-pot, as one of them called it. 'Don't—let—that—'ere—old—tea-pot o' yourn git played-out—before—you—git to—me,' entreated a Missourian at the further end of the hospital. I explained to him that there was no play-out to the tea-pot; that I had alcohol and tea enough to keep it in active operation for weeks, and he then waited patiently for his turn."

'The Other Side of the War' differs materially in treatment from the book just described. It is a bright sketch of a sad subject, comprising a brief but clear account of the origin and development of the great auxiliary to the Medical Department of the Army, followed by a bundle of letters full of the spirit of the time when McClellan was the idol, and the Army of the Potomac the most completely appointed of the land forces. Miss Wormeley's letters are cheerful in tone, sparkling with clever descriptions of persons and places, and showing an appreciation of the romantic as well as the prosaic side of war. Between the lines, however, it is not difficult to catch glimpses of the mountain of misery which the Sanitary Commission did so much to alleviate and reduce. Miss Wormeley seems to have combined with a heart alive to the sufferings of others a rare philosophy, which strengthened her hands and increased her efficiency under exceptionally trying circumstances. The tonic effect of a cheerful face at the side of a sick-bed is beyond description, and it was the nursing rather than the surgery that pulled so many of the soldiers through the valley. And this is the key to the situation. The Government supplied the surgeons, the Sanitary Commission the nurses.

Both of these publications are typographically excellent, with large type and good illustrations. Miss Wormeley's book has three fine portraits on steel. Mrs. Livermore's story is accompanied by full-page war scenes and seven portraits. The colored pictures of battle-flags have a suggestion of "padding" uncalled for in such an important work; they should form the basis of a history of American battle-flags.

RECENT NOVELS.

Steadfast: The Story of a Saint and a Sinner. By Rose Terry Cooke. Boston: Ticknor & Co.

Sam Lovel's Camps: Uncle Lisha's Friends under Bark and Canvas. A Sequel to 'Uncle Lisha's Shop.' By Rowland E. Robinson. *Forest and Stream* Publishing Company.

Red Carl. Translated from the German of J. J. Messmer by Mary E. Ireland. Thomas Y. Crowell & Co.

A Stiff-Necked Generation. By L. B. Walford. Henry Holt & Co.

My Cousin Miss Cinderella. Translated from the French of Léon de Tinseau by E. W. Naylor. D. Appleton & Co.

Reuben Sachs: A Sketch. By Amy Levy. Macmillan & Co.

Sought and Found. Translated from the German of Golo Raimund, by Adelaide I. Buckley. Funk & Wagnalls.

A Happy Find. Translated from the French of Mme. Gagnerin by Miss E. V. Lee. T. Y. Crowell & Co.

Gertrude's Marriage. By W. Heimburg. Translated by Mrs. J. W. Davis. Worthington Co.

It is evident that Mrs. Cooke has not yet exhausted her resources. In 'Steadfast' she takes us back into the early days of New England; and the historical facts of the time—especially an action of the Consociation of churches—form the foundation for an effective story. A Congregational clergyman is summarily assailed for having dared to preach in a Baptist meeting-house. The bigotry and tyranny of the Consociation are briefly but thoroughly exhibited in the resolution which it passed and sent to the Rev. Philemon Hall, after receiving his reply to its first admonition: "Resolved that the Rev'd Mr. Hall soe preachynge was Disorderlie. That Mr. Hall should not Sett as a member of this Counsil for his disorderlie Preachynge." It might occur to the modern mind that there was only one worse thing than being dismissed from such a body, and that was a continuation of membership in it. But such peremptory action in those days brought sorrow and pain and disgrace in its train, as well as years of hopeless struggle to maintain an independent position. The saintly Mr. Hall became increasingly impressed with the right and justice of his attitude, but it was a slow martyrdom for all that. This portion of the book is treated with unusual force, and the lighter elements of the story work harmoniously together. Esther is particularly well drawn—and altogether 'Steadfast' is much above the average novel.

Life is not long enough to read many dialect stories, and 'Sam Lovel's Camps' hardly makes up in narrative interest for the hours necessary to translate its pages into intelligible English. The book will be enjoyed by those who think the trapping of muskrats and other small game one of the concerns of life, and who regard episodes wherein green hands at hunting and fishing are tipped over backward into the water as exciting and funny. The author observes carefully—even poetically at times—and the dialects and provincialisms are well rendered. But when the laborious reading of the first few chapters is accomplished, the rest may be safely and cheerfully skipped with a clear conscience.

There is always a certain dreariness about translations of German stories. 'Red Carl' is a trifle less heavy in that the scene is laid in America; but it will have little interest for any but German working-people, to whom it will probably appeal. The story is a sort of Sunday-school novel, written by the pastor of a German church in Baltimore. Much very moral and undeniably proper teaching upon the hackneyed subjects of the labor question, socialism, and temperance is spiced with trades-unions, strikes, dynamite, and a cyclone.

Every one has heard of the clergyman who was always happy at funerals. Similarly it may be said that Mrs. Walford is always entertaining with her bores. Her bright people are all very well, but her dull ones, like Miss Austen's, are delightful. She has now given us a book full of tiresome characters which show her pen at its cleverest. As a story, it is not one of her most attractive, and a growing habit of comment and explanation is making havoc with her charm of style; but rarely has she done more ingenious writing than on some pages of this latest novel. Here, as heretofore, she is somewhat over-free with Death, ringing in his services with as little concern as one would summon a messenger boy withal. The hatchment in excess ill becomes the society novel. Moreover, it is disappointing to be early called, as in this case, to part with one of the most diverting personages of the book, a lady of the Campaigner family. An engagement between an aristocratic beauty and a plebeian army officer, its origin, rise, and fall, give Mrs. Walford her opportunity for her specialty—social contrast. Inimitable are the self-plumings of the officer's relations, the complacency of the bridegroom elect, the match-making and fussing among the old dames. When the stage is cleared of all the disagreeables, the plot grows thin and the book is willingly closed. The discrimination between man and man is singular in the Walford novels. A boor may not carry his hands in his pockets (very properly), but why may a peer dine in his shooting clothes (when not in America)?

No pen but a French one can make such a sketch as 'My Cousin Miss Cinderella.' Its mingled lightness and pathos, wit and simplicity, cynicism and tenderness, are wholly Gallic—also, may it be said, its fustian later pages? The story is of the slightest fabric, beginning with the account of the life of a little French boy brought up in an old château, in a fossilized group of relatives, whom the child vaguely thinks of as "ancestors." The mouldy life of the household viewed by his childish eyes is full of half-comic, half-sad contrasts between crabbed age and youth. His relations with his "enemy the gardener" form one of the amusing touches in the sketch. A little girl cousin comes to live at the château. The boy grows up, enters college, goes to Paris to see the world, and meets his fate through a mysterious correspondence. This is all the story, which is more in manner than in matter, and which loses its charm after the hero reaches manhood. One wishes that he might have remained always a little boy at Vandelnay.

The Jews are said to be deeply grateful to George Eliot for 'Daniel Deronda.' It would be interesting to know whether they are also thankful to the rising school of fiction-writers who, in hitching their wagons to George Eliot's star, draw them, not through the golden streets of Jerusalem, or even the picturesque Jews' quarter, but through the plush-furnished drawing-rooms of the modern rich, vulgar Israelite. We should suppose that the more sensitive portion of the Hebrew people might feel that mediæval persecutions had begun again, and be ready to cry out, with 'Daniel Deronda's' author, that observation without sympathy is torture. Amy Levy's book, 'Reuben Sachs,' is a clever sketch of life among the Jews in London. There is too much crowding of figures for so small a canvas, and too much description of each figure; but every one stands out with garish distinctness. Whether Miss Levy designed to arouse interest in Hebraism, or to set the faults of the Hebrew race in a strong light before themselves in warning, or whether she simply intended to make a realistic picture out of a latter-day phase of a world-old

type, she has made a readable book, and of a certain technical ability, whose interest is not to be found in a race question, or in any profound problem, but in speaking scenes of vulgarity, where the only virtues (devoutness and family affection) lean to failings' side—the failings of narrowness, inquisitiveness, and greed.

'Sought and Found' "was translated because of its rare simplicity and beauty," says the brief preface. Its simplicity is not a "sancta simplicitas," but consists rather in an absence of all but the most elementary representations of human life and feeling. Half the characters are marked by a frank depravity, the other half by that type of virtue which struts and says, "I'm a man, every inch of me." The writer has thus been spared all the trouble of making mezzo tones in his symphony. A cumbrous style and some thoughts on politics give the book an illusive air of importance which will not deceive after the third page. The translation is not throughout bad, but one comes upon phrases like this: "It is the story of the hidden treasure. He who too early or the wrong word speaks, cannot find it." "Oh! it was a bitter but salutatory draught which I forced upon him." Cakes and ale are distributed in the proper places, and the curtain goes down on discomfited spleen, and injured innocence, with tears upon its lashes, smiling in rectitude's clasp.

Companion in insipidity is 'A Happy Find,' from the French, which is, however, more readable by reason of its clear and simple style, and of an excellent rendering into English. A footnote, as follows, "*Char*, a conveyance, somewhat like a wagon, used in France and Switzerland," carries an idea of the naïveté of the translation. Equally primitive are the incidents of the story. No one but an inhabitant of another planet will have any difficulty in scenting out each mystery as it appears, shrouded in threadbare veiling. In a library devoted to the initiation of such an alien being into the art of reading earth's modern fiction, a book like this would find a place among the elementary volumes.

Following these with 'Gertrude's Marriage' is much like passing from pap to pap. The minimum of flavor is reached in them all, and one wonders when the public will have had its fill of these stereotyped feeblenesses. That they continue to be written proves the capacity of the reading world for the "illimitable inane." That they get themselves translated, and well translated, proves it even more fully, while the addition of poor photogravure illustrations, it is to be feared, is a life-preserver instead of a "crowning," which by rights should "curse and kill."

David Livingstone. By Thomas Hughes. [English Men of Action.] Macmillan & Co. 1889. Map. Pp. vii, 208. 8vo.

THE author of 'Tom Brown' has a congenial subject in Dr. Livingstone, and he has written an admirable account of his life. It would be hard, indeed, to find a better popular biography. The story is simply and naturally told, in large part in Livingstone's own words, and it cannot fail to interest deeply even those who are already familiar with it. There are no attempts at portrayal of character, nor discussions of moral or scientific questions, but Mr. Hughes confines himself strictly to his task of telling what the great missionary-explorer did in the thirty years of his active life.

He shows very clearly that Livingstone's roving life was not, as has generally been supposed, the following out of a natural bent, but was mainly the result of circumstances. On reaching Africa in 1841, instead of being allotted to a station, he was obliged to find his own field of labor; and, seeing that Cape Colony was overstocked with missionaries, he pushed almost immediately into the unexplored territory to the north to make for himself a home. Three times in the next eleven years, at three different places, he founded a station and built the necessary mission buildings, only to be obliged to abandon them—in one instance on account of prolonged drought and the removal of the natives, in another because of the destruction of the station by the Boers. Once more, in 1861, he attempted to establish himself permanently on the Shiré, near Lake Nyassa, but the death of his wife in the fever-haunted swamps of the lower Zambesi frustrated this design. From that time his chief energies were directed to the opening of Central Africa to Christianity and commerce, to the healing "the open sore of the world," the slave-trade, and to the discovery of the sources of the Nile. This last motive, it can hardly be questioned, was, however, the ruling one at the end.

Mr. Hughes gives many instances of Livingstone's extraordinary power of attaching men to him and inspiring them with his own enthusiasm for the end he had in view. The African negro was not the only one who felt this, as is shown by what Livingstone accomplished during his eighteen months' stay in Great Britain after his first great journey. "He found Africa the dark continent," said one at the time, "and left it the most interesting part of the globe to Englishmen." Nor was it the natives alone whom he befriended and took into his service that showed this attachment for him, but the Arab slave-traders equally felt his influence, calling him "the Good One." His power was largely due to the absolute trust which he inspired His followers knew that what he said he would do would be done unless death prevented. This was once strikingly shown in an act the heroism and self-sacrifice of which have rarely been equalled. When he reached the west coast of Africa, after a terrible journey of many months, through a forest similar to that which Stanley had to penetrate in order to reach Emin Pasha, although exhausted with privations and repeated attacks of fever and dysentery, he refused to go to England, where his wife and children were, because he had promised to take the natives who had accompanied him back to their home on the Zambesi. It was a year's journey distant, but, after a few months' rest, he did not hesitate to undertake it. In noble emulation of this, Stanley, a few years later, instead of returning directly to Europe from the mouth of the Congo, first took the Zanzibaris who had followed him across the continent back to their home, in fulfilment of a like promise.

It is not difficult to discover from this account of his latest biographer the cause of the affection with which Livingstone was regarded by his countrymen. It was not simply his adventurous career which touched the popular fancy, but it was rather the character of the man, who to a perfect courage and fortitude joined a singular tenderness for the suffering; whose work, carried on with a thoughtlessness of self and with an energy which neither pain nor weakness could conquer, was marked by a wonderful thoroughness in its smallest details. A remarkable instance of this is the careful noting of the number and course of the streams which he passed in those last days of his life when he could "hardly hold a pencil" and his sight had nearly failed. Above all, he was a man who added to the qualities which the Anglo-Saxon race most admire, a deep piety. His religious belief was singularly liberal and tolerant, for a Scotchman, but perfectly simple and childlike, and so unlike that of the other popular hero whom he in so many respects resembles, Gen. Gordon. Possibly the most striking fact in Dr. Livingstone's history was the steadfastness of his faith. No man in this century was probably ever witness to so much cruelty and misery as he. No man could say with greater truth than he did after the massacre of the women at Nyangwe, "It gave me the impression of being in hell." More bitter still, even, was the fact, which at last forced itself upon him, that he had, with infinite toil and sacrifice, opened Africa, not to the Christian missionary, as he had hoped, but to the slave-trader, who followed close upon his footsteps. Yet, with all this, his faith never faltered, one of the last entries in his journal being: "Nothing earthly will make me give up my work in despair. I encourage myself in the Lord my God, and go forward."

Mr. Hughes's closing chapter sums up the results, as regards the establishment of missions, of Dr. Livingstone's labors, with a sketch of recent events in East Africa. The map contained in this volume shows very fairly his route in his various journeys, but it does not give, as it ought, the results of the more recent explorations.

Picturesque Alaska; A Journal of a Tour among the Mountains, Seas, and Islands of the Northwest, from San Francisco to Sitka. By Abby Johnson Woodman. Boston: Houghton, Mifflin & Co. 1889. 8vo, 212 pp., cuts.

THIS is an amiable little book which should have been privately printed and distributed to friends. It consists of a brief preface by John G. Whittier, three chapters of rhapsody about the route from San Francisco to Puget Sound, overland, and four, ditto, on the remainder of the route to Alaska and return, by the inland passage. Having entirely exhausted the resources of the English language in commendatory adjectives while engaged on the first part of the journey, the author disproves Max Müller's theory of language, as follows (p. 104): "Happily, our powers of appreciation are capable of infinite expansion, and we have been able to meet the demands of every new occasion with increased enjoyment; but words have their limitations in my vocabulary. Only this can I say, multiply and add three-fold to all I have said of the former, and you may have some idea of the latter."

There is nothing new in the text or illustrations. The latter are familiar from the railway circulars, and the map is not as good as the railway maps. However, a person who has never read any of the other books on the Alaskan tourists' route will get a very fair idea of it from these letters. The most interesting thing in the book, to any one conversant with the subject, is the unconscious evidence it affords of how myths grow. The famous Baranoff died at Batavia in 1819 at the age of eighty, leaving no widow or children. He was originally a provincial shopkeeper in Siberia. About 1868, a Russian sailor named Baronovitch, who remained in the country when the Russian authorities departed, set up a salmon-salting establishment and smuggler's resort at Kasa-an Bay. His wife was of Indian origin, and, after the death of Baronovitch, took an Indian husband, with whom she carried on business at the old stand. Now, as we learn from Miss Woodman, she is called "the Baroness of Baronoff," and, "during the

Russian rule in this northwest she was the wife of Baron Baronoff."

As dates and statistics are little appreciated in this primitive society, and the people living in Alaska, for the most part, know little of its history under the Russian rule, we may expect, in time, quite a crop of myths and legends of modern origin. The last item which has come to hand, and which should certainly attract the attention of the Society for Psychical Research, is, that the well-known and long-established ghost of the "castle," or Governor's house at Sitka, has submitted to be photographed by an artist who has a studio in the ancient pile.

The Play-time Naturalist. By Dr. J. E. Taylor, F.L.S. Appletons. 1889. 8vo, xii, 287 pp., 366 ills.

THIS is a book out of place. We find in it a very large number of illustrations of common British birds, insects, shells, etc., of which very few are found in America, and those only among the lowest and most minute forms illustrated. The pictures are coarse and rude; some of them are very old acquaintances, and few of them are sufficiently explained in the text to be of use to American boys and girls. The anatomical figures are particularly poor and confused, the details indicated by the lettering frequently not being even mentioned in the text. British children might find it useful in aiding them to identify creatures which they collect in hedges and ditches. In this country it will not be thus available, while the text is so hurried, brief, and mixed as in no way to make up for the deficiencies of the pictures.

It is astonishing, in view of the general interest in natural history indicated by the success of the Agassiz associations, that so few American text-books for beginners have been offered to the public. Little books, like that of Dr. Stokes on 'Infusoria,' which we had occasion to praise some time since, are rare exceptions; inadequate rehashes or bald reprints of inapplicable foreign booklets, like the present publication, are unfortunately still the rule.

My Autobiography and Reminiscences. By W. P. Frith, R.A. Vol. II. Harper & Bros. 1889.

MR. FRITH has been emboldened by the success of his first very readable volume of Reminiscences to add a second, which is also a pleasant means of passing time—one may say in this case of wasting it, for we have here only the lees of the cask. The matter consists mainly of anecdotes of models and artists, lunatic asylums, the Hanging Committee of the Exhibition, and literary convivialities. Dickens, Landseer, Sala, Leech, Shirley Brooks, and others of more or less note appear in the gallery, and there is a good deal of correspondence, especially from Shirley Brooks; but these letters are illustrations of good-fellowship only, and often trivial. The level of the whole is that of free conversation, glancing from grave to gay, but good only for the moment. Like the previous volume, it affords a look into the life of artists (which, like that of actors, is a world of its own), but with much less breadth than in the former case. The instances of folly and ignorance in the purchasers of pictures ought to serve as warning to collectors, and the views of the seamy side of life may amuse the cynical. We have found one good anecdote of Constable: "In one of Constable's pictures, among those in his studio, was one in which a kingfisher or a heron, I forget which, had been introduced. I admired it and Constable said, 'Yes, I saw it. I had sat a long time without a living thing making its appearance. I always sit till I see some living thing, because if any such appears it is sure to be appropriate to the place. If no living object shows itself I put none into my picture.'" The chapter upon the oratory of the R. A.'s is a bright spot. Mr. Frith states his opinion that the present system of instruction in art is inferior to that under which the pupil was apprenticed to a single master for a long time; and as our author is not free in expressing opinions, this is the more noticeable. The amiability and warmth of appreciation which he exhibits towards his fellow-craftsmen is one of the best qualities of his volume.

Bureaucracy; or, A Civil-Service Reformer. By Honoré de Balzac. Translated by Katherine Prescott Wormeley. Boston: Roberts Brothers. 1889.

THIS is the thirteenth volume of the excellently printed and bound series of the novels of Balzac that Roberts Brothers are bringing out. Perhaps through the fatality which is well known to inhere in the number thirteen, the volume that happens to fill this place is 'Les Employés,' a novel, if one may call it so, which hardly possesses the life or the interest of some of its forerunners. In form it is to a considerable extent almost an essay. In the whole first half of the book there is no movement nor stir of life. Portrait succeeds portrait, miniature after miniature—each most clever in its drawing, but none with the vital spark in it. The whole book, in fact, is descriptive rather than dramatic; the reader is lectured upon the evolution of a character, rather than left to see the character unfold itself in action.

There is no need to speak of the argument of the story, which is familiar to all lovers of Balzac. The head of a bureau, some time in the reign of Charles X., plans a reform of the civil service in the direction of greater simplicity, effectiveness, and economy, but is foiled by a plot, and retires to comparative poverty and happiness. The translation is in the main well done. It may perhaps be added that the title will seem to some a very liberal expansion of 'Les Employés.'

BOOKS OF THE WEEK.

Amiel, H. F. Journal. Translated, with an Introduction, by Mrs. Humphry Ward. Macmillan & Co. $1.75.

Anderson, Dr. J. W. The Essentials of Physical Diagnosis of the Chest and Abdomen. Macmillan & Co. 75 cents.

A Souvenir of the New York Centennial: Instantaneous Scenes. 48 Photo-Gravures. A. Wittemann.

A Vagabond Lover. By "Rita." Frank F. Lovell & Co. 20 cents.

Babelon, E. Manual of Oriental Antiquities. Translated by B. T. A. Evetts. Illustrated. G. P. Putnam's Sons. $3.

Bacigalupi, E. G. Immunity through Leucomaines. Translated by R. F. Rafael, M.D. J. H. Vail & Co.

Bond, J. J. Handy-Book of Rules and Tables for Verifying Dates with the Christian Era; giving an Account of the Chief Eras and Systems Used by Various Nations. 4th ed. Scribner & Welford. $2.

Browning, R. Poetical Works. Vols. XIII. and XIV. Macmillan & Co. $1.50 each.

Caird, Dr. J. An Introduction to the Philosophy of Religion. New ed. Macmillan & Co. $1.50.

Caird, Mona. The Wing of Azrael. Frank F. Lovell & Co. 30 cents.

Carey, Rosa Nouchette. Merle's Crusade. Philadelphia: J. B. Lippincott Co. $1.25.

Clapp, H. L. Thirty-six Observation Lessons on Common Minerals. Boston: D. C. Heath & Co.

Crocker, G. G. Principles of Procedure in Deliberative Bodies. G. P. Putnam's Sons. 75 cents.

Cummings, A. The Fall of Kilman Kon. G. W. Dillingham.

Day, H. N. Elements of Mental Science. Ivison, Blakeman, Taylor & Co. $1.

De Vere, A. Essays, Chiefly Literary and Ethical. Macmillan & Co. $2.

Doble, C. E. Remarks and Collections of Thomas Hearne. Vol. III. May 25, 1710—December 14, 1712. Oxford: Clarendon Press.

Douglas, M. Can Love Sin? Philadelphia: T. B. Peterson & Bros.

Dunlop, R. Life of Henry Grattan. Philadelphia: J. B. Lippincott Co. 75 cents.

Evans, W. L. Memory Training: A Complete and Practical System. A. S. Barnes & Co. $1.25.

Fiske, Mary H. The Giddy Gusher Papers. New York: *Dramatic Mirror.*

Garibaldi, G. Autobiography. 3 vols. London: Walter Smith & Innes.

Gilmore, J. R. The Last of the Thorndikes. People's Publishing Co. 50 cents.

Gissing, G. The Nether World: A Novel. Harper & Bros. 45 cents.

Gould, S. B. Mehalah: A Story of the Salt Marshes. Frank F. Lovell & Co. 50 cents.

Gould, S. B. John Herring. Frank F. Lovell & Co. 50 cents.

Greaves, J. Statics for Beginners. Macmillan & Co. 90 cents.

Grimes, J. S. Geonomy: Creation of the Continents by the Ocean Currents. And Kosmo-Nomia: the Growth of Worlds and the Cause of Gravitation. Philadelphia: J. B. Lippincott Co. 50 cents.

Haferkorn—Heise. Handy Lists of Technical Literature. Part I. Milwaukee: National Publishing and Printing Co.

Hayes, P. S. Electricity and the Methods of its Employment in Removing Superfluous Hair and Other Facial Blemishes. Chicago: W. T. Keener.

Heaton, J. L. The Story of Vermont. Boston: D. Lothrop Co. $1.50.

Holden, W. Spiritual Evolution. Philadelphia: J. B. Lippincott Co. $1.

Jackson, S. M. Papers of the American Society of Church History. Vol. I. G. P. Putnam's Sons. $3.

Jamieson, A. Electrical Rules, Tables, Tests, and Formulæ. Illustrated. The Industrial Publication Co.

Johnson, Laura Winthrop. Eight Hundred Miles in an Ambulance. Philadelphia: J. B. Lippincott Co. 75 cents.

Julian, G. W. Later Speeches on Political Questions, with Select Controversial Papers. Indianapolis: Carlon & Hollenbeck.

Views of American Cities: New York. Brentano.

Warden, Florence. The Fog Princes. Frank F. Lovell & Co. 30 cents.

Wiggin, Kate Douglas. The Story of Patsy. Boston: Houghton: Mifflin & Co. 60 cents.

Wilson, J. D. English Grammar Made Practical. Syracuse: C. W. Bardeen. 75 cents.

Wilson, Prof. W. D. Theories of Knowledge, Historically Considered. Syracuse: Wolcott & West. $1.50.

Winsor, J. Narrative and Critical History of America. Vol. I. Aboriginal America. Boston: Houghton, Mifflin & Co.

Woerner, J. G. Treatise on the American Law of Administration. 2 vols. Boston: Little, Brown & Co.

Wood, H. F. The Englishman of the Rue Caïn. Chicago: Rand, McNally & Co.

Woodman, Abby Johnson. Picturesque Alaska: Journal of a Tour from San Francisco to Sitka. Boston: Houghton, Mifflin & Co. $1.

Woolley, Celia Parker. A Girl Graduate. Boston: Houghton, Mifflin & Co. $1.50.

Wright, C. D. Report on the Custody and Condition of the Public Records of Parishes, Towns, and Counties. Boston: Wright & Potter Co.

Yonge, Charlotte M. Beechcroft at Rockstone. Macmillan & Co. $1.50.

Zit and Xoe: A Novel. By the Author of 'Lady Bluebeard.' Harper & Bros. 25 cents.

Zuchtmann—Kirtland. The Choral Book for Home, School, and Church. Boston: Ginn & Co. 70 cents.

FANNY KEMBLE'S NOVEL:

Far Away and Long Ago.

"She has betrayed in this, her last work, highly imaginative qualities. With whole hearted perception she writes of the things and people whom she met during her daily walks in what she might call the halcyon days of her eventful life."—*Boston Post.*

HENRY HOLT & Co., New York.

FRENCH, GERMAN, SPANISH, ITALIAN, and LATIN.

You can, by ten weeks' study, master either of these languages sufficiently for every-day and business conversation, by Dr. R. S. ROSENTHAL'S celebrated MEISTERSCHAFT SYSTEM. Terms $5.00 for books of each language, with privilege of answers to questions, and correction of exercises. Sample copy, Part I, 25 cents. Liberal terms to teachers. Latin, Part I., just published, price 50 cents.
MEISTERSCHAFT PUBLISHING CO., BOSTON, MASS.

HOMŒOPATHIC DESCRIPTIVE Catalogue (books, medicines, etc.) mailed free. Address BOERICKE & TAFEL, 1011 Arch St., Philadelphia, Pa., or 145 Grand St., New York. *Oldest Homœopathic Pharmacy, established in 1835.*

The Nation.

NEW YORK, THURSDAY, JUNE 13, 1889.

The Week.

THE President's Attorney-General was unfortunate, to say the least, in stating the reasons for the removal of Elliott Sandford, Chief Justice of the Supreme Court of Utah. Judge Sandford was informed on May 10 by the Attorney-General, that the President would be pleased to receive his resignation, since in the President's opinion the "public interest would be subserved by a change in the office." The Judge replied by asking whether he had been accused of misconduct or malversation in office, and saying that if charges had been preferred against him, it "would be unwise, unbecoming, and improper" for him to resign until they were either proved or disproved. In response to this inquiry, the Judge received from the Attorney-General a letter of which the following is the main portion. We quote from the *Times*, which reproduces the full correspondence:

"I beg to say that there are on file in this department some papers complaining of the manner in which your judicial duties are discharged. Independently of these particular complaints, however, the President has become satisfied that your administration of the office was not *in harmony with the policy he deemed proper to be pursued with reference to Utah affairs*, and for this reason he desired to make a change, and out of courtesy gave you an opportunity to resign."

This is an extraordinary letter to come from such a source. In the first place, it contains a reflection upon the Judge's judicial character which either ought not to have been made at all, or ought to have been stated more specifically. In fact, it is no sooner stated than it is abandoned as not being the real cause for removal, and that cause is then said to be that the Judge's administration was "not in harmony with the policy" which the President wishes to have pursued in Utah. The Judge was quick to see the weak spot in this statement, and used it with telling force, as follows:

"In reply, I have the honor to say that my earnest purpose while on the bench as Chief Justice of this Territory has been to administer justice and the laws honestly and impartially to all men, under the obligations of my oath of office. If the President of the United States has any policy which he desires a Judge of the Supreme Court to carry out in reference to Utah affairs, other than the one I have pursued, you may say to him that he has done very well to remove me."

If the Attorney-General cannot do better than this when he is pressed for an excuse for making a removal without cause, he will be much wiser to attempt no excuse whatever, but say simply, what was obviously the truth in this instance, that the removal was ordered because the President desired the place for somebody else.

"When a vacancy occurred in the office of Commissioner of Indian Affairs," says the statement given out from the White House on Monday, "the President decided to appoint Mr. Thomas J. Morgan of Rhode Island to that place." A vacancy did occur in the office, but how? Simply because John H. Oberly, the incumbent, who "has made an excellent record," by the confession of the New York *Tribune*, was notified that he must resign, or he would be removed. Not much is known about Morgan, but the country may at least rejoice over having escaped the threatened appointment of Roderick Random Butler, the Tennessee Republican who was once convicted of selling a cadetship for cash, but nevertheless secured the endorsement of a majority of the Republican members of the last Congress.

A few days ago it was announced that George P. Fisher of Delaware had been appointed by President Harrison First Auditor of the Treasury. The announcement was made the same day that news came of the Johnstown disaster, and the public mind has since been so much engrossed with the details of the calamity that the Fisher appointment has passed almost unnoticed. It is, however, a case which demands attention. The biography of the appointee given out with the announcement of his selection stated that he is a resident of Dover; that in 1863 he was appointed Associate Justice of the Supreme Court of the District of Columbia, and that he held that office until 1870, when he became United States Attorney for the District. But this needs to be supplemented by the recital of certain important facts in his career which are not here even alluded to. On the 22d of June, 1876, President Grant nominated George P. Fisher as United States District Attorney for Delaware. On the following morning the New York *Tribune* published a leading editorial article upon this appointment, entitled "The President's Latest," the chief points of which we reprint:

"The District Attorney's office in Washington was for a long while, under Judge Fisher, the chief bulwark of the District Ring. There were hatched the conspiracies to convict innocent citizens of felony, the plots to get rid of witnesses, the schemes to take burglars out of jail. Crimes of the most dastardly character were committed under the sheltering eaves of that scandalous establishment. Theft, and riot, and bribery, and perjury received there encouragement and protection. Two of the Assistant Attorneys have been tried in the Criminal Court for grave offences, and are to be tried again. George P. Fisher, who was chief of the office during the period when it was a disgrace to the whole nation, could not escape the responsibility for the actions of his subordinates. Whether he was only foolish, inefficient, and weak, or was answerable in some more direct way for the doings of his son Charles and his other assistant, Harrington, we need not inquire. . . . At any rate, public opinion would not tolerate Fisher's appearance in the Safe Conspiracy trial, and, after some miserable revelations of the misconduct in his office, the President was obliged to call for his resignation. And now Gen. Grant nominates this same George P. Fisher United States District Attorney for Delaware. The Senate must reject the nomination without an hour's unnecessary delay. . . . If Gen. Grant will not think of Republican interests, we hope Republican Senators will."

The *Tribune's* earnest protest proved effectual. On the 10th of July its Washington correspondent telegraphed that "The President has withdrawn the nomination of George P. Fisher, formerly District Attorney for the District of Columbia, and removed for cause, but lately nominated for the position of United States Attorney for the State of Delaware. This is done at Mr. Fisher's own request. The opposition to his confirmation is so great as to convince him that he will be rejected if he allows a vote to be reached. The Senate is a pretty subservient body, but Mr. Fisher, after the exposures of a few months ago, is more than it can swallow." Of course President Harrison was the victim of ignorance and deceit when he appointed this disreputable politician.

Senator Higgins of Delaware was the guest of the Norfolk Club in Boston on Saturday night, and was received with much favor as the first Republican Senator from that State. He made a speech in which he dwelt with much earnestness upon the wrongs which his State had suffered through Democratic rule and the unscrupulous men whom that rule had put in office. He treated his election as an important step towards breaking Democratic rule in the solid South, saying: "I do not ask the men of the North to settle this Southern problem; I do not ask for their interference, but only that they will not go back upon the Republicans of the South who are in earnest in rectifying the wrongs." This appears to have been a more or less direct appeal to the Republicans present not to "go back upon" ex-Judge George P. Fisher of Delaware, whom Senator Higgins has persuaded the President to appoint First Auditor of the Treasury. Does the Senator think the South can be redeemed from misrule by conferring office upon men of that stamp? He asked anxiously, in his Boston speech, "What is the malaria in your atmosphere, what is the poison that you have bred, that led the author of the 'Biglow Papers' to say that the greatest type of American citizen was Grover Cleveland?" Fisher's appointment is a sample of the "malaria" and the "poison" that have driven out of the Republican party not only Mr. Lowell, but thousands of other men who represented its intelligence and conscience in the days of its glory.

The country is now reaping the fruits of "the loot of the Railway Mail Service," and the appointment to responsible places of such men as Paul Vandervoort of Omaha, Neb., who was dismissed from office by Postmaster-General Gresham for insubordination and for absence from his post 265 days in a year. From all quarters come reports of missent and delayed letters and newspapers. A Republican, who is a member of the Boston Scientific Society, writes to the *Herald* that some of his letters apparently miscarry, as he can get no answers to them, and that it took him three days to hear from an adjacent point in New Hampshire. The New York *Times* prints a communication which shows that a letter that was mailed in New York

May 31, at 6 P. M., was not received in Boston until June 5 at 7 P. M. The St. Louis *Republic* mentions several cases where letters mailed in that city and plainly directed to places in Missouri were sent on circuitous routes, one occupying twelve days in its transit. The New York *Age*, a Republican paper conducted by colored men, has had within a month more than 500 complaints from subscribers in all parts of the country of failure to receive the *Age*.

That was a most scandalous performance which the Civil-Service Commissioners unearthed in the Troy Post-office. A Republican having been appointed Postmaster, the clique who manage the politics of the party got together and parcelled out the patronage of the office, so many places being allotted to this ward, so many to that, and so many to the outlying towns, the subdivision of the last being left to the bosses in the several localities. The places must be filled under the Civil-Service Law, but it was taken for granted that no Democrat would be fool enough to suppose that he stood any chance, and no Republican who was not on the list would apply, for fear of punishment for insubordination by the ward leaders; or, if there was any danger that the programme might miscarry by the presence of any "smart" outsider in the examination-room, no blank application need be sent to such suspect. The Commissioners, however, have annulled the examination thus held, and announce that another, and a fair one, will be held two or three weeks hence. "All who enter the examination," they say, "will have the same chance, whether Democrats or Republicans. It is not only unnecessary, but it is absolutely useless, to get any 'backing' or 'support' of any kind. The marking will be given fairly on the merits of the examination passed." The Commissioners further improve the opportunity to announce that "members of boards of examiners, as well as all other employees in the public service, are liable to indictment for violation of the Civil-Service Law, and the penalties for such violation will be rigorously enforced by the Commissioners. Any attempted evasion of the law by an applicant will insure his name being stricken from the list of eligibles." While the spoilsmen are so generally running riot, it is a great pleasure to have such evidence as this that the Civil-Service Commissioners are thoroughly in earnest.

The Salt Lake *Tribune*, after a burst of indignation over the proposed monument to the late Postmaster Pearson, calls on Mr. George William Curtis "to put in words the reasons why Mr. Pearson's memory should be a matter of such public concernment that the great public of the United States should be called upon to contribute towards supplying a fund to erect a monument to his memory." There is one answer that anybody served by the New York Post-office might make, and as it is the only one that would have any weight with the Salt Lake *Tribune*, we will mention it. It is that Mr. Pearson carried on the work of the New York Post-office efficiently with $250,000 less money per annum than his successor deems absolutely necessary.

Telegrams from the West state that the Senate Committee on our Canadian Relations have found a pretty general expression of friendliness to Canada, and of a desire for closer commercial relations with that country. Senator Hoar is reported as being much impressed with this unanimity of sentiment on the Pacific Coast and in Minnesota. Perhaps his ears have been more open to suggestions of this kind by reason of the action taken recently by the Boston Executive Business Association, which is a general trades assembly of merchants representing the most important business interests in that city. This body has unanimously adopted a resolution directing one of its committees to appear before Senator Cullom's Committee, and oppose any change in our laws intended to restrict the competition afforded to the merchants and consumers of New England by the Canadian railways. Mr. Alden Speare, President of the Boston Chamber of Commerce, said that there were 560 different points in New England that were now beneficially affected by the Canadian Pacific Railway, and that "New England did not desire *and would not submit to* any curtailment of the privileges which she now enjoyed through the Canadian railways." Such language, coming from a responsible quarter, points to the necessity of sending Mr. Joseph Nimmo, jr., to New England immediately to explain to the misguided people how their interests are suffering by reason of Canadian railroad competition.

The legislative year closes without the passage in any State of a law requiring the publication of campaign receipts and expenditures. Mr. Crosby introduced at Albany a very crude bill relating to this subject, but it was never heard of after its first announcement. A really excellent law, requiring full publication by committees and candidates, after election, of all receipts and expenditures, was passed by the lower house of the Massachusetts Legislature and rejected by the Senate, though it was very generally favored by the press of the State. There is nothing surprising in this failure to make progress. The reform sought aims directly at the greatest evil in our politics, and for that reason it will be desperately opposed by the politicians of both parties. Sworn publication of receipts and expenditures would put an end to the use of large sums of money for corrupt purposes, and, of course, would deprive the men who handle those sums in campaigns and at elections of their chief source of income. These will join hands with all the other men who get a living out of politics, and it will require a long and a hard fight to overcome their opposition.

The Republican Gov. Bulkeley of Connecticut vetoed on Friday the excellent Ballot Bill which was passed by very large majorities in both houses of the Legislature. "His reasons" are, from beginning to end, a bald plagiarism from those with which Gov. Hill has made us so familiar, and therefore a very tedious and verbose version of the familiar spoilsmen's doctrine in reference to all reforms—"I am in favor of the principle, but against this application of it." Gov. Bulkeley is as much afraid of sworn election officials as Gov. Hill is, and thinks there is grave peril to free institutions involved in taking the control of elections away from irresponsible political workers and putting them into the hands of sworn agents of the State. The strong public sentiment, however, which fairly compelled the Republican majority to pass the bill in the first instance, is manifesting itself so strongly against the Governor's veto that the politicians of the Legislature are unwilling to let the bill fail now. The friends of the measure are acting wisely in consenting to amendments which satisfy some of its opponents, but do not affect in any way the vital principles of the bill. Thus the amendment removing from the act the application of its provisions to town elections in which minority representation is involved, is a concession which does not affect the principle of the bill, and which it may be wise to make, since it will lessen the possibility for confusion in first putting the new system into operation.

The most important amendment suggested is that allowing the grouping of candidates under party names upon the official ballots. This concession was made in the Saxton bill when it was redrafted last winter, and it is also embodied in the Tennessee, Missouri, and Indiana laws. The Wisconsin, Montana, Minnesota, Massachusetts, and Rhode Island laws follow the order of reception of nominations in arranging candidates' names, and their example was copied by the drafters of the Connecticut bill. There is no valid objection to the grouping by parties. Such arrangement may aid the ignorant voters in marking their ballots, and will certainly diminish the chances of confusion and delay in putting the new system into practice. It might have been wiser for the friends of the bill to have yielded these points when the measure was under discussion in the Legislature, for considerable stress was laid upon them then; but there is slight probability that such yielding would have prevented the Governor's veto. Point after point of that kind has been yielded in New York State to overcome Gov. Hill's objections, but he has found new objections without apparent difficulty. He and Gov. Bulkeley are unalterably opposed, not to minor details of the reform system, but to the great principle of the system itself—which is a secret ballot, absolutely removed from espionage and interference of all kinds.

The State Assessors, Messrs. Ellis, Wood, and Williams, have been making their annual round of investigation into the values of real estate in New York. A telegram from Albany to the *Times* says that they have found a general depreciation of farm lands. "We have," says Assessor Wood, "visited fourteen counties, and in all we find the same condition of affairs. City prop-

erty is increasing in value, while farming property is growing less and less valuable. I cannot see any way for it to improve, and in a few years you will see more tenant farmers than anything else. No one wants to buy farm lands here. They can't get their money out of them. Most of the farms were bought about war times, when big prices were paid." This information tallies with that furnished by the Connecticut Bureau of Labor Statistics. In the last report of this bureau the profit-and-loss accounts of nearly one thousand farms are given, from which it appears that 54 per cent. of the whole number show an annual loss, or a loss for the year in which the examination was made. Farming in New England and New York ought to be a very prosperous employment, according to the prevailing tariff philosophy, for here we have the very conditions which the protectionists tell us the tariff will bring about, namely, a home market for the products of agriculture. We have lots of factories alongside the farmer ready to take his wheat and bacon, but somehow the result is contrary to the prediction. Farming land continues to decline in value, while town and city land increases in value. There are large tracts of land in the New England States which supported farmers' families a quarter of a century ago, that have been abandoned and are now growing up to forest. Yet here, if anywhere, we ought to find agriculture prosperous and remunerative if there is any virtue in a protective tariff. May it not be true that the object of the tariff, which is to secure profits to manufacturers in order that they may make farmers prosperous, fails in the second half of its aim? Would it not be well to change our fiscal policy for a while—turn it around end for end—and tax the manufacturer for the benefit of the farmer, in order that the latter may have abundant means to buy the goods of the former? After trying this plan for a while we should perhaps all be agreed to adopt a third policy, viz., that of letting every man have and enjoy just what he earns.

Few persons except specialists in electrical science are aware how rapid is the march of electric power over the world. Unused and disused water is everywhere going into the yoke of the dynamo. Mountain streams in Switzerland that have never before been used for any purpose except that of gratifying sight-seers are now supplying power to mills five miles distant, and the manufactures of that country are having a great revival. The latest project of this kind in our own country, and one of the most promising, is that of utilizing the power of the "Dalles of the St. Louis," a few miles west of Duluth. These consist of a series of cascades some miles in length, over which the whole volume of the river precipitates itself, with a total fall of more than 500 feet. A local engineer proposes with a single dam on the St. Louis to run all the street-cars in Duluth, to furnish all the electric lights needed, and to supply a large amount of power for other uses. There is room on the river for thirty or forty such dams. It is the common observation of the electrical journals that all the manufactories of dynamos are running night and day, and cannot keep up with their orders.

Prof. Canfield, whose inability to teach political economy in accordance with the views of the majority of voters in Kansas led to his retirement from the University of that State, has been offered and has accepted a professorship in Williams College, Massachusetts, of which institution he is a graduate. Our first information, that Prof. Canfield was driven out of the University of Kansas in consequence of his anti-tariff teaching, was derived from one of the high-tariff organs, the *American Economist*, which expressed much satisfaction over the affair. It appears, however, that that was not the whole of the case. Prof. Canfield's retirement was in large part voluntary. He found the door to promotion in the University shut, as to himself, by reason of his views on protectionism, and he deemed it best to resign, although he had not, at the time, received any offer from Williams College. It is very strange that the University of Kansas has overlooked the claims of Prof. Denslow to the chair of economics vacated by Prof. Canfield, especially at a time when Mr. Andrew Carnegie is distributing Prof. D.'s 'Principles of Economic Philosophy' at his own expense among our higher institutions of learning. We are informed that one college in New England has received one hundred copies of this work as a gratuity from Mr. Carnegie, for free distribution among students.

The contentions of the Windom worsted decision were, that man's inventions in machinery for separating the long from the short hairs of the covering of sheep, have so obliterated the former trade distinction between worsted and woollen yarns, and the trade difference between worsted stuffs and woollen stuffs, that now everywhere in wholesale business "woollen cloth" is recognized as including "worsted cloth," and that the new trade nomenclature of 1889 should be interpreted into the old tariff law of 1883. We showed last week, from New York trade journals, that the distinction between worsteds and woollens is, in our own country, everywhere applied in 1889 as in 1883. So it is in England, as we infer from market reports in the London *Times* of which this is an example:

"LEEDS, May 18.—The turnover of *woollen* cloth this week has rather exceeded the average of the last fortnight, and manufacturers have unexpectedly had fresh orders placed with them by American buyers. Solid *worsteds*, both plain and fancy, sell fully up to the average, and manufacturers' prices for these, as well as for corkscrews, are easily maintained. Some fresh new designs in figured mantlings have been brought out, and the Americans were most on the alert to get first deliveries of them. An average business is doing with the Continent in novelties, both *worsteds and woollens*."

Was it quite creditable in the officers of the National Association of Wool-Manufacturers to permit Mr. Windom to be thus misled?

A new pretender to the throne of France has just made a solemn assertion of his right. This is none other than Don Carlos, Duke of Madrid, head of the House of Bourbon, and known in a somewhat limited private circle as Charles VII., King of Spain. "He carries about with him," the Prince de Valori says, "that immaterial empire which makes his pilgrim's staff a sceptre and his humble traveller's cloak a royal mantle." It was at a great banquet in Paris on the 21st of May that this fine speech was made, and the Prince de Valori was announced as the representative of Charles VII. in France. King Charles does not desire the crown of France for himself; indeed, he would not take it, for all his spare time is now occupied with the cares of empire. He has, therefore, appointed his heir, the Prince of the Asturias, dauphin of France *cum jure successionis*. It is expected that all well-disposed persons will govern themselves accordingly. One might well think that even an excellently disposed person would find some trouble in picking his way through a labyrinth of "rights." There is the right of the Comte de Paris, and the right of Prince Jerome, and the right of Prince Victor, and this new right of Don Carlos; of late, too, it has been hinted that there are rights in the family of Lucien Bonaparte, and nobody is ignorant of the right of Gen. Boulanger. There is also, it is proper to remind one's self, a right of France which is now almost exactly one hundred years old.

The Naples correspondent of the *Indépendance Belge* gives an account of the sad fortunes of an Italian band of emigrants to Central America. They went from Venetia in two parties, last year and the year before, numbering 1,000 persons, their destination being Costa Rica. On April 8, 847 of them disembarked at Marseilles, the survivors of the expedition brought home at the expense of the Italian Government. They had gone to Port Limon under contract with an Italian emigration company; skilled laborers to receive $1.60 a day, and common laborers $1.00. This, of course, seemed wealth to the poor fellows, who naturally knew nothing of the high cost of the necessaries of life in their new home, or of their coming exposure to exhausting labor under a tropical sun and to wasting diseases away from medical care and even from medicine. Once in the midst of such terrible conditions, with many sick and dead, they revolted and refused to work. But the local laws were appealed to; some of them were prosecuted for breaking their contracts, and were condemned to harder labor than that from which they had fled, others were imprisoned, some were even put to the torture. News of their sad plight reached Italy, most fortunately, and the Venetian deputies at once made moving appeals on their behalf in the Italian Parliament. Premier Crispi immediately promised that the unfortunate men should be brought back to their country, and the landing at Marseilles concluded the history of the experiment in which 150 lives were lost in less than two years.

THE NEW SOCIALISM.

WITHIN the past month two journals have been started in Boston, advocating step-by-step national Socialism. The first of these, the *Nationalist*, numbers among its contributors men of all creeds and no creed —including Thomas Wentworth Higginson, Rabbi Solomon Schindler, and the Rev. Edward Everett Hale. The other, the *Dawn*, is avowedly Christian in faith, and is indeed a new religious journal, having for its one doctrine the essential identity of Christianity and Socialism. Its contributors are mainly ministers—members of a society of "Christian Socialists." The best known of those writing for the first issue is, perhaps, the Rev. James O. S. Huntington, who for years has been at work among the poor of this city as a salaried clergyman, and now enters the ranks of manual labor in order completely to identify himself with the class for whom he is working. In the *Dawn* the doctrine of the brotherhood of man is made the correlative of the Fatherhood of God. In the *Nationalist* there is, of course, no such theological formulation, but the religious spirit is quite as intense. Here it is "the religion of humanity" that is preached, and the "better future" which inspires hope and effort is that which awaits "the heirs of time" when the social revolution is accomplished.

The elevation of thought and sentiment which characterizes these two journals forbids their dismissal with a mere word as to the weakness of their political programme. Almost without exception, the writers are Americans, with the best of Puritan blood. Quite without exception, they belong to what they themselves would call "the privileged classes." Theodore Parker once said that the democracy that was wanted was not that which said, "I am as good as you are," but that which said, "You are as good as I am." In this movement we have a socialism which is of the latter type. Instead of an appeal to the poor that "there is no reason why we who do the hardest and most repulsive work should receive the lowest pay," we find the appeal to the rich that "there is no reason why we who do the lightest and most attractive work should receive the highest pay." The duty of the rich to grant takes the place of the right of the poor to seize. But the fact that it is granting and not grasping which is urged does not signify that it is merely the Socialism of a charity sermon that is preached. On the contrary, it is German Socialism of the most radical type. Not content with making absolute altruism the religion of the individual, it is made the religion of the State—a religion which the State shall impose upon every citizen.

This identification of Christianity with State Socialism is, of course, nothing new. A number of years ago, when Prince Bismarck first broached his policy of diverting the German masses by the rattle of Socialistic playthings, he replied to the objection, "This is Socialism," by asserting, "It is Christianity." Conscientious, no doubt, was the assertion; yet the workings of the principle have not been such as to make any one really in sympathy with the masses unlearn the old lesson, taught by Adam Smith, that when the national Government interferes in industrial affairs, it always takes as its counsellors the representatives of the richest and most powerful interests. Compulsory insurance of the workingmen has been introduced. One-third of the amount to be paid them in insurance is deducted directly from their wages; another third is nominally paid by their employers, but in the long run indirectly deducted, with the additional evil of increasing their dependence upon their present masters by practically involving a deferred payment of wages. The remaining third is paid by the Government — the amount being raised by a protective tax on breadstuffs, which also is paid by the working classes, and yields five dollars to the landlords where it yields one to the Government.

The workings of State Socialism in our own country, whenever administered by the national Government, are similar in character. Subsidies have been granted to railroads because of the indirect benefits they conferred upon the farmers, while none have ever been proposed for the farmers because of the indirect benefits they conferred upon the railroads. The taxing of the poorer classes in order to pay the labor-bill of the richer is the guiding principle of our tariff, but no one ever thought of taxing the richer in order to pay the rent-bill of the poorer. These facts have sufficiently demonstrated that the common good as understood by the national Government is the good of those who are rich and powerful enough to make their influence felt at Washington.

Yet it is national Socialism which the Nationalists and the "Christian Socialists" wish to promote in America. It is, perhaps, somewhat to the credit of their judgment, if not of their logic, that they do not at once attempt to make their reform "planetary." Nevertheless, in advocating a national organization for their coöperative commonwealth they ignore the fact that the coöperative principle has rarely been successfully applied, except by the smallest organizations, political or industrial, and there only when the business management has been easily understood and closely watched by the whole body of the coöperators. In such cases we have nothing to urge against the value of the principle. It is already successfully applied in most departments of public works and in the support of our school system. It is being applied to the suppression of trades which injure the community instead of serving it. It will doubtless be applied more and more rigorously to the prevention of extortion on the part of combinations and natural monopolies. Yet this principle of combined resistance to antisocial forces is very different from that which lies at the basis of German Socialism. The American movement against monopolies, natural and unnatural, is merely to enforce the principle that the capital invested therein shall exact as nearly as possible the rates of interest which the presence of free competition would establish. It is "dead rent," and the dividends upon certificates representing merely the capitalization of proposed extortion, which cause the entire outcry against Trusts—an outcry which comes mainly from those who would be the last to maintain that there is any industry in which the capital actually employed in production is not entitled to the competitive rate of interest. This principle of competitive rates as the measure of just payment is the one thing in "*bourgeois* economy" which the Socialists repudiate with the greatest violence. Capital, they say, is entitled to no compensation whatever for its services, and the services rendered by labor are to be compensated according to the needs of the laborers.

The socialistic objection to the democratic doctrine of individual rights is its selfishness. To this it is not enough to reply that the selfishness of seeking one's own good consistently with that of his neighbors is in bright contrast with the reckless egoism which characterizes protectionist Socialism. The democratic doctrine of individual rights is selfish, but it is only half of the democratic programme. Democracy quite as much as Absolutism or Socialism recognizes the promotion of the public good as the basis of individual rights and the measure of individual duties. In democracies, as nowhere else, is the spirit of devotion to the public good present, and in democracies as nowhere else are the contributions which the individual owes to the public measured by the principle of equality of sacrifice. It is true that there is at present no democracy where the principle is consistently carried out. In our own the necessities of the poor are taxed in order to increase the superfluities of the rich. But this is not democratic principle. Wherever democracy is strongest and Socialism weakest, as in the local governments of America and Switzerland, the duties of the individual to the public are sought to be proportioned to his means. The extent of the contribution of the individual to the public is measured by the need of the public just as exactly as in Socialism the extent of the contribution of the public to the individual is measured by the needs of the individual.

Democracy, when logical, recognizes the principle of brotherhood quite as much as Socialism, and with much greater accuracy of analogy. It strives to establish equality of opportunities, not equality of recompense. Napoleon once said that the French Revolution meant "*la carrière ouverte aux talents*" —a clear pathway for talent. This is the meaning of democracy, and also the meaning of brotherhood. It strives continually to make the highest mental and moral training more accessible to all in order that each may find his capacity, and then win a place according to his efforts in the service of the public. This is also the meaning of Christianity. Wherever the Church is thoroughly democratized, there its spiritual and intellectual ministrations are made free. In all this there is no departure from the principle of individual responsibility. The true charity is that which develops the higher needs of the recipient, not that which satisfies

his lower needs. It elevates the manhood of the younger brother, instead of degrading him into a perpetual pensioner. Our democracy does have need to be more large-hearted. It must be moral or Christian enough to keep trying to lessen the contrast between the degrading want of those who have neither the training nor the character for self-support, and the enervating waste of those who, at the other end of society, are equally helpless and useless. Such publications as the *Nationalist* and the *Dawn* give evidence that such will be its spirit. But they do not signify that there will be any abandonment of the lines of development in the past in order to embrace the Socialistic system, which would annihilate individual responsibility and manhood by centring all rights and duties in the State. Democracy will accept the religion of altruism, but it will not enforce it as a State religion.

SENATOR EDMUNDS ON "POLITICAL WORKERS."

In the current number of the *Forum*, Senator Edmunds has written elaborately around the inquiry: "To what extent is it wise and proper to reward political workers by offices?" We say he has written *around* the question, because in the paper before us he does not come to close quarters with a remedy for what he concedes to be a portentous evil in our public life. He testifies that our politics are now "*chiefly* carried on by those whose ends are *purely* personal." These he describes as political workers without political convictions or principles, who are conspicuous at the primaries, on the platforms, and in the processions, and who, when party success has been achieved, instantly demand their reward, in the form of an office, as a right. If they do not get the offices, Mr. Edmunds says, they look on the party victory as their own individual defeat; and when they do get them, they create subordinates who are satellites in organizing a machine for the next campaign. These mercenary partisans do not, he says, include all the "political workers," for there are others, who have formed and who hold party opinions, who are not mercenaries toiling for pay, but who, nevertheless, expect offices more or less adapted to their qualifications. These last-named do not, adds Mr. Edmunds, regard the mercenaries with satisfaction.

Finally, there is the great body of the people, whom he describes as wishing "their public servants to be selected for their character, and for their capacity thoroughly to fulfil the duties imposed upon them; and of course, if those duties involve matters of national policy or discretion, they would wish the officials *to be of the same general political opinions as themselves.* They do not wish to pay the political worker with a public place he is for any cause unsuited to fill, while they are glad to show their recognition of the *unselfish political activity* of upright and capable men by intrusting them with the performance of those public duties which they are best fitted to engage in." He declares that each and all of both varieties of political workers "are displeased in common if any old incumbent, no matter how perfectly he may be discharging the duties of his office, no matter how steadily he may have refrained from 'pernicious activity,' no matter how high his character, no matter how well the public interest is promoted by his service, is not at once dismissed, in order that each one of the claimants may compete for the prize of the vacancy." He condemns both parties as at fault in this relation. He sharply criticises Mr. Cleveland for treating with "ribald and systematic contempt," after his inauguration, the professions made during the canvass, but he visits no condemnation on Harrison by name. He argues, in an interrogative way, for making the "great bulk of the administrative offices of the country" as permanent as the operatives of a railway, but he evidently does not now feel that much will be presently accomplished. He affirms that selfishness and ambition are innate in politicians, and the thirst for office cannot be "*much* diminished." The most that can be done is, he thinks, to repress its gratification by the appointing power.

Here is the disappointing part of what the Chairman of the Senate Judiciary Committee says, for he only proposes a quickening of the moral sense of voters and Presidents. He distinctly declares that the thirst for office and its gratification (as Harrison is now gratifying it) promote the use of money to buy votes, false registration, and false counting. He would have those engaged officially in "the great body of civil employments" protected by a tenure during good and efficient conduct, and yet he protests against "an office-holding class" even of subordinates like village postmasters, tide-waiters, and clerks who are not officers. On Mr. Edmunds's theories, what can be done? He would have "officials of the same general opinions" as the winning party, and would not have an office-holding class. He would have, nevertheless, the *small* administrative employments, involving no policy of government, as permanent in tenure as "station-agents, engineers, linemen, and operatives" on a Vermont railway; but he has no word of censure of Harrison. Nor does he, with all his means of observation, seem to realize that, when taxes are to be increased by executive order, the powers that be will insist that each custom-house sampler, opener of packages, examiner, assistant appraiser, deputy collector, entry clerk, and liquidating clerk has to do with that "policy."

It is not for a Senator of Mr. Edmunds's standing to assume that public opinion is torpid on this question, and that until public opinion bestirs itself, nothing can be done. That is the excuse of all who are spoils-hunters at heart. Mr. Edmunds is no spoils-hunter. He sees as plainly as anybody the cancer in the vitals of the body politic. He has an assured position, and it is for him more than for any other Senator to rise in his place and say, "This thing must be stopped," and to introduce and advocate, as he knows how, a measure to stop it. Then public opinion will have a rallying-point, and if it has the elements of growth, it will grow. If he would put into such a measure of reform half the spirit and assiduity that Mr. Roosevelt put into the reform measures of the New York Legislature a few years ago, or a moiety of the calm courage and conviction of Bishop Potter's centennial sermon, he would not need to repine very long over the laxity of public opinion.

THE TRANSCONTINENTAL RAILWAY SITUATION.

The Transcontinental Association is composed of railroads whose interest lies largely in traffic to and from the Pacific Coast. These railroads have special problems of their own to solve and special circumstances to face; hence the need of an association separate from the others, although all American roads between the Atlantic and the Pacific are carriers, to a greater or less degree, of transcontinental traffic. California occupies a peculiar place in our commerce, for its products compete partly with those from other portions of our country, but principally with tropical fruits from abroad. From this it follows that the centre of this competition, the place where the fight for Californian supremacy must be won if won at all, is the Atlantic seaboard. This is heightened by the further fact that to the competition of Californian oranges or raisins with those from Italy or Spain is added the competition of the water routes from the Pacific with those by rail.

This state of things the seaboard cities regard with complacency; for in any case, whether from abroad or by sail or steamship from the Pacific, these cities will be well supplied with wine, salmon, prunes, fruit, olive oil, and the like. But it is otherwise with the merchants of the Pacific slope and the rail carriers which depend upon their sales for traffic. If trade is not developed, all transcontinental interests suffer. For many years, until lately, these conditions have been recognized in the tariffs which, on these special products from California to the Atlantic Coast, made rates low enough to allow of sales as against the imported articles; while from California to the interior of our country the rates were such as to be reasonable of themselves, and, although higher than to Boston or New York, yet low enough to compete with the foreign products shipped westward from the cities named. To have refused low rates to our seaboard would simply have reduced California sales on this coast, whose people would continue buying the European fruit; while the loss of the revenue to the carriers from the Atlantic traffic would have required still higher interior rates to earn the same net profit as before.

So matters stood up to the time of the Inter-State Commerce Law and the long discussion about the long and short haul. The theory to which we are settling down is this: that where all carriers are under the Inter-State Commission, a rigid enforcement of this long-and-short-haul principle is possible, but where one or more competitors are freed from the law, it is right that the remaining United States carriers should also be ex-

empt. Now, water carriers are not under the Commission; hence we find a rate of 70 cents to New Orleans from New York, while to Atlanta, a little more than half way, the rate is $1.14. A rigid levelling would compel the roads to give up New Orleans traffic (to no one's benefit), or accept 70 cents to Atlanta until bankrupt. The Transcontinental Association attempted to apply this water exemption to their tariffs by making a lower rate from California to the Atlantic seaboard than to the Mississippi or Missouri River. These tariffs the Inter-State Commerce Commission condemned as contrary to the law, notwithstanding the existing violations due to water competition in the South and elsewhere. So tariffs no higher to the interior than to the Atlantic were substituted.

The growers and dealers of California have been waking to the fact that their markets are not wide enough for the disposal of their products, and conventions have been held which seemed to consider the transcontinental roads responsible for the stagnation, because of high freights which forbade sales. The roads did indeed reduce their charges somewhat in answer to these appeals, but the root of the trouble was not reached. This, in brief, is the attempt of the Inter-State Commission, under a wrong sense of duty, to impose upon the land carriers between the Pacific and the Atlantic a strict system of charges, while competing water routes are, from the nature of the case, able to quote whatever they please without reference to the Commission. Under this ruling, demanding equality of charge to all points, the transcontinental roads are placed between two fires: if they make low rates to the Atlantic, the rates to the interior must also be so low as to yield no revenue; while if high rates are made all round, both carriers and California producers lose the Eastern markets. The remedy lies in applying to the California traffic the principle found equitable everywhere else—of low rates when made necessary by competitors not under Government control. To a modified extent, what is here said of water competition between San Francisco and New York applies also to the competition of the Canadian Pacific, for which provision should also be made in the rulings of the Inter-State Commerce Commission.

The Southern Pacific Company has given notice of its withdrawal from the Transcontinental Association because of this unsatisfactory condition of things. The possible disastrous effects of the breaking up of this Association gives emphasis to the statements of the difficulties imposed upon it by the Inter-State Commerce Commission, at whose door the responsibility must be laid.

SMALL AND LARGE WORKSHOPS.

THE great evils which have sprung from the massing of workmen in the large factories made necessary by modern industrial development, have been dwelt upon by many writers on social and economical subjects. So, too, it has been the dream of many an economist that we may yet reach a stage of progress in the application of force when it will be possible to restore the combined house and workshop of other days. Occasional attempts have been made to bring back, on a small scale and as a beginning, those Arcadian times when the smoke of the factory and the crowding of the tenements were unknown, and when every handicraftsman labored, as he lived, under his own vine and fig trees. A writer in the *Century*, a few months ago, gave an account of an experiment in establishing a community of hand-weavers in Westmoreland. The trouble with this, as with other like schemes, is that it stands more upon a benevolent than a business basis, and does not squarely meet the necessary conditions of manufacturing competition. If the thing is ever to be done, it must be with full regard to cost of production.

Something more than a sentimental value, therefore, attaches to the study of the question published in the last *Jahrbuch für Gesetzgebung*, by Dr. H. Albrecht, since it proceeds precisely along the line of investigating the comparative cost of production in small and large workshops, in the various trades and manufactures, and with the aid of improved and cheaper motors of small power. He begins by inquiring as to the actual state of the case in Germany—that is, as to the number of small compared with large workshops, and as to the proportions of the total working class engaged in each. All shops with five or less workmen he reckons as "small," the others as "large." On this basis, according to the Trades Census of 1882, there were 2,908,294 small shops as against but 97,163 large ones, and 61 per cent. of all German workingmen were in the small establishments. Dr. Albrecht next inquires what trades run most to large and what most to small establishments. This is done to find out where the small shops now best hold their own, and so where improved methods may be expected to tell most powerfully. His results are as follows: Out of every hundred establishments devoted to mining, smelting, or the manufacture of salt, ninety-nine are "large"; so are 76 per cent. of the manufactories of chemicals, 75 per cent. of the printing-houses, 73 per cent. of the paper mills, 63 per cent. of the shops for working in metals (iron excepted), 64 per cent. of the manufactories of machines and instruments of all sorts, and 52 per cent. of the establishments devoted to the textile industries. First among the trades which favor the small shops, on the other hand, stands clothing and repairing, 90 per cent. of all the establishments in this branch being "small," as are 78 per cent. of the shops for wood-engraving, 75 per cent. of those devoted to the fine arts, 70 of those of workers in iron, 66 of the shops of the various industries in leather, wax, and gum, and 63 of the manufactories of articles of food and luxury.

With the natural advantages of the small shop in certain trades thus indicated, the next question is as to the progress of invention in making more convenient and cheaper motors for use in manufacture on a small scale, and their ability to compete with the enormous engines of the huge factory. Dr. Albrecht takes up and thoroughly discusses four kinds of motors intended for such competition—water motors, hot-air engines, gas motors, and the small steam engine. The results he arrives at are that, on the average, the cost per horse-power per hour is, for water motors, 1.90 marks, for the hot-air engine 0.42, for the small steam engine 0.37, and for the gas motor 0.34. These figures are, of course, but relatively exact, since the price of coal, gas, etc., varies from time to time and in different localities. Taking them as a fair average, however, Dr. Albrecht argues that the least expensive of these motors, of from one to four horse-power, can successfully compete with the large engines of the great plants. We cannot give here all the considerations upon which he dwells, but will only mention some facts which he cites to prove the growing use of such motors. Thus, according to the Trades Census of 1882, gas and hot-air motors constituted but 2½ per cent. of the total number of engines in German shops, yet in printing-houses they numbered 50 per cent. of all, in fine-art establishments 21 per cent., and in shops for working metals 13 per cent.

Very suggestive, also, are the statistics of the manufacture of these motors of small power in Germany. Up to the summer of 1888, the five leading manufacturers of gas and hot-air engines had sold 31,000 of the machines, with a total of 94,000 horse-power, for use in Germany, besides exporting 27,000 more. In perfect keeping with this showing is that part of a late report of the Inspector of Factories which says: "There is a constant increase in the number of small shops which are seeking, by the introduction of such motors, to appropriate as much as possible the advantages of the large establishments."

Thus far Dr. Albrecht goes upon the firm ground of actual conditions and accomplished facts. His conclusion is that, even as things are now, the small shop is more than holding its own in certain lines of manufacture. But it is in the future that he sees the greatest hope, and, through the perfecting of electric motors and the transmission of electrical force, that he expects to see the day of the small shop fully come back again. He imagines that the greatest difficulty will be the establishment of great central stations for the creation and distribution of electrical currents. Private invention, he thinks, may be left to devise convenient and cheap motors. But the Government, he argues in the prevalent German fashion, must furnish the force. Already we have the great municipal electric-lighting plant in Berlin; why not let the dynamos furnish power to the small shops in the daytime? If this were done, and similar methods followed throughout Germany and the world, it would be the surest way to fulfil the prophecy of the great electrical inventor and expert, Werner Siemens: "The goal of the revolution of science will not be a mass of great factories in the hands of rich capitalists, in which the 'slaves of labor' drag out their monotonous existence, but the return to individual labor."

HOW WASHINGTON BECAME COMMANDER-IN-CHIEF.

WASHINGTON, June 1, 1889.

IT is well to review occasionally our accepted historical conceptions, gauging them by newly discovered material, and, in the clearness of vision that distance of time permits, altering the perspective, or distribution of light and shade, as the confusion of controversy subsides. The recent celebration in New York proves that the popular enthusiasm for the national hero has by no means diminished, but rather increased, in the course of a century; so that it is only just and proper to recur to the past and revise, where necessary, what have wrongly become popular ideas through carelessness, ignorance, or blind adoration. It is to the last that we are most indebted for our historical fallacies.

Washington came to the Presidency the elect of the nation. The movement that led to his selection was spontaneous, unanimous, and heartfelt—such an unquestioned tribute as has rarely been paid to any man. Without him the Constitution would not have been accepted by the States, and it was with him in their thoughts that the Convention created the office of President, and somewhat fearfully clothed it with great powers—for jealousy of power in any national or (to use the more common phrase of that day) federal body or appointment was the bugbear of those who had been most actively engaged in the contest against royal prerogative, the cruel edicts of a corrupt Parliament, and the armies and machinations of a "wicked and abandoned" ministry. The fear and jealousy that were directed against Great Britain in 1765-82, were turned against the Continental Congress and the advocates of a continental policy in 1783-88. It was the personality of Washington that contributed largely to bear down this jealousy; and when he journeyed to New York to assume his high office, it may be truly said that throughout the land there was not heard a voice disapproving the choice.

To read the generally accepted history of the Revolution, one would suppose that it was with a like unanimity that Washington was appointed to the command of the Continental army in 1775; that he then stepped into a position to which the universal suffrage of the colonies was calling him. Nothing could be further from the truth; and to strip the incident of all the romantic features that hero-worship has thrown around it, it may be described, in the somewhat vulgar parlance of to-day, as the result of a "political deal" got up between Massachusetts and Virginia. The result justified the wisdom of the choice, and led to much self-congratulation on the remarkable sagaciousness of Congress and the really marvellous fitness of the man for the place—ideas handed down to us as remarkable instances of prescience on the part of the Congress. The fact was, and we may write it in all reverence, that Washington had not known military service since 1758; that he was better remembered for his defeat and surrender at Fort Necessity, for his pertinacious and sometimes unreasonable claims for precedence in command, and his obstinate pestering of General Forbes about the proper road to Fort Duquesne, which led Forbes to really dislike him, than for his successful mission to the Ohio in 1753, and his courage and daring under Braddock. For nearly sixteen years he had been without a command, a planter of tobacco and raiser of wheat, a successful manager of a large estate, and an eager and active speculator in Western lands.

This was not the stuff of which a military hero was made, and while in 1774 the formation of so-called independent companies throughout Virginia in a measure renewed his military prestige, it was not as a soldier that he was thought of, even in his own colony. Jonathan Boucher, the Tory preacher and tutor of Jacky Custis, who knew Washington well, did not err far when he said that the "most distinguished" part of his (W.'s) character was that he was an "admirable farmer"; and no one was more surprised than he to see this man, who had always acquitted himself "decently, but never greatly," develop into a great leader of armies, and, later, of the people. Edmund Randolph wrote with much truth that, at the beginning of 1774, "some others were more prominent than Washington. It could not have been then truly foretold that the germs of solid worth which afterwards overspread our land with illustrious fruit, would elevate him very far above many of the friends of the Revolution." While constantly chosen one of the Burgesses from his county, a position that his large estates, serving as a "pocket borough," gave him, he never attained the honor and preeminence of being chosen to the Governor's council—a reward that marked the happy owner as a favored one and one of the "notables." He had a wide acquaintance in Maryland, Philadelphia, and New York, and his diaries show how high these acquaintances were in the social life of their respective colonies; but his cold temperament forbade many intimate friends, and it is very doubtful if he could have been described by many of his acquaintances, or could have been recognized even by name outside of these circles. Had he nominated himself and "run" for an office, his standing would have been slight outside of his own county, and none at all outside of his colony. This is sad reading to the romancer on Washington, but the facts bear out this statement of the case.

The Continental Congress of 1774 was more useful in bringing together delegates from the different colonies, and allowing an interchange of views, than for its acts and paper remonstrances. The Bostonians were much pitied throughout the land as objects of ministerial cruelty, but this sympathy was rather for their present sufferings than for what were regarded as their rash and intemperate aims, interpreted then as a desire to be independent not only of Great Britain, but of the other colonies too. Martyrdom was not considered as a good ground for conferring leadership, and a little resentment was caused by the "inward vanity and self-conceit" of the Bostonians, which led them to "assume big and haughty airs," and to "affect to dictate and take the lead in Continental measures." Wait, wrote the mild General Gage to his master, and see these Bostonians pay the other colonies "the compliment of taking their advice." His words were true. In the Congress of 1774, by their explanations and personal intercourse with the other delegates, the Massachusetts men were able to remove in a measure their reputation for rashness, and came to be "universally applauded as cool and judicious."

Among the Southern members thus influenced was Washington. His letters to Bryan Fairfax prove that he heartily sympathized with the general cause of the colonies before he attended the Congress at Philadelphia. While it was sitting, he saw somewhat of the Massachusetts delegates. On September 28 he records in his diary having dined at Edward Shippen's, and spent the afternoon with the Boston gentlemen, and Adams notes that he spent that evening at home with Colonel Lee and Colonel Washington, "who came in to consult us." On October 7, the two sets of delegates again met at Thomas Smith's. The result of these meetings is reflected in a letter Washington wrote to one of his old military companions, then in Gage's army at Boston. Though you are led to believe, he wrote in effect, that the Bostonians are rebellious, setting up for independence, and what not, I know from their leaders that it is not their wish or interest to set up for independence; they are merely desirous of preserving their rights.

Before the second Congress assembled, the old jealousy was revived. Adams records how the Sons of Liberty of Philadelphia met the Massachusetts delegates on the road, and warned them to be moderate and "to recognize the lead of Virginia." The "fine fellows" from Virginia, who were "very high," and beside whom the Bostonians were "mere milksops," had evidently made an impression. Deane, who was not very apt to be easily impressed, wrote that he had "never met, nor scarcely had an idea of meeting," with such men as the Southern provinces had sent to the Congress. In wealth and social position there could be no contrast, as the Southerners were the "capital men" of their colonies, while, with few exceptions, those from the East were men of "desperate circumstances," risking nothing but their necks in the contest. It was to Virginia that the Presidency of the Congress was given in 1774 and 1775, and when Peyton Randolph left the body, it was on Hancock, the propertied man of the East, that the honor was bestowed. The intimacy between the Adamses and Richard Henry Lee, radicals all, even for that day, in a measure accounts for this division of the honors, and appears to have been the controlling motive for this and subsequent political "deals."

The Massachusetts delegates brought with them the idea of a continental effort, and as early as June 2 the Massachusetts Congress hinted to the General Congress that as the army then collecting from different colonies was for the general defence of the rights of America, the regulation and control of it was a proper subject for continental action. On the next day Artemas Ward was "from expediency" appointed commander-in-chief by the Provincial Congress, but without any idea of forestalling any action that might be taken at Philadelphia. Learning of this appointment, the New York Congress thought proper to consider a like appointment in that colony, as "the supposition that in case a continental army should be established, these officers will be permitted to preserve their respective ranks, appears to us highly probable." In Philadelphia the notion of a continental army continually acquired force, until at length action was precipitated, and the step taken—a natural result from the course of events. The question of command now came up for decision.

Early in May, James Warren had expressed the wish that Washington or Lee were in command before Boston—a wish that had probably been inspired by the reports of Washington that the delegates had brought back from the Congress of 1774. Ward was too old to make an efficient commander, and the army too heterogeneous and independent to be easily kept in control. Gates and Lee had reputation for great military knowledge and experience, and Lee especially was much affected by the Eastern delegates. But they were both foreign-born, and both had served in the British establishment, and this was regarded as an objection that overruled what military features were in their favor. Remembering, perhaps, the warning of the Sons of Liberty, and a letter from Warren that may have reached him just before

the nomination of Washington would remind him of it—"I should heartily rejoice to see this way the beloved Colonel Washington, and do not doubt the New England generals would acquiesce in *showing to our sister colony, Virginia, the respect*, etc."—Adams suggested Washington, but opposition was made. Many of the delegates thought that as the army was nearly all from New England, had a general of its own, and appeared satisfied with him, Ward should receive the appointment. Fear was expressed that the supersession of the New England generals would lead to discontents and break up the army, as the troops were represented as being bound to their own officers. Adams was positive in the matter, and so was Richard Henry Lee, connected by marriage with Washington; but it required several days of effort to remove the opposition, and when the nomination was at length formally proposed by Washington's friend, Thomas Johnson of Maryland, the choice was made "unanimously." As a compensation, and to equalize the terms of the "deal," the first and third major-generals were taken from the Eastern colonies—Ward and Putnam—and of the eight brigadier-generals, all but one were taken from New England. Respect, surely, had been shown to Virginia, but New England did not suffer her claims to be forgotten; and between the two sections all the offices were divided.

The statement of Bancroft that there was only one general officer "who drew to himself the trust and love of his country," is one of those afterthoughts which subsequent events seem to justify. While we find the suggestion of Washington both among the Southern and the Eastern delegates, there was no "general demand" for his election. Indeed, Adams very distinctly states that it was the idea of many "of the staunchest members" of the Congress, and it was the yeast of the activity of a little junto in that body, the Adamses and Lee being its representatives, that leavened the mass. I do not lay much stress on the incident referred to by John Adams, of Washington attending the sessions of Congress in military uniform, thus, as has been suggested, nominating himself for the place. In a few doggerel lines on the Congress of 1774, Drowne says:

> "With manly gait,
> His faithful steel suspended by his side,
> Passed W'-sh-gt-n along, Virginia's hero."

This may be poetic license, but it is quite as probably a statement of fact. Washington may have worn a sword, the House of Burgesses may have worn a uniform when in session, and it may have been this that Adams had in mind. The incident is more curious than important.

No one admitted more frankly the political nature of his election than Washington himself. "The partiality of Congress, joined to a political motive, really left me without a choice," he wrote to his brother, and he uses nearly the same words in letters to Col. Bassett and the Virginia military companies. To his wife he wrote as if he had expected the appointment, and could not decline it if it were made:

> "You might, and I suppose did perceive, from the tenor of my letters, that I was apprehensive I could not avoid this appointment, as I did not pretend to intimate when I should return. This was the case. It was utterly out of my power to refuse this appointment, without exposing my character to such censures as would have reflected dishonor upon myself and given pain to my friends."

Adams was naturally jubilant over the success of his policy. "This appointment will have a great effect in cementing and securing the union of these colonies." An anonymous writer from Philadelphia said that "Washington, a delegate from Virginia, is, at the particular request of the people in New England," appointed; but this is claiming too much, as the "people" were not so much as consulted, and it is doubtful if the people would have ratified the choice, had it been submitted to them. Gage, with a truer insight in the matter, wrote to Dartmouth of "much division in Congress, jealousy of the Eastern delegates, owing to which Washington was appointed to the chief command of the rebel army." The act was, in fact, due to the efforts of a few of the more far-sighted leaders of the Revolution, and was made successful by colonial pride and jealousy.

WORTHINGTON C. FORD.

PREHISTORIC CHRONOLOGY.

ATHENS, May 12, 1889.

THE recent excavations at Mycenæ, taken in connection with the earlier and better-known facts relating to that most important of all ancient cities to the archæologist, throw a curious little side-light on some points of what, for want of a better term, I must call prehistoric chronology. Very little, it is true; and such as might be aptly compared to a glow-worm in a tomb, scarcely serving for more than direction, not for distance. So long as we are in the range of epigraphy or of sculpture of known schools, we have tolerably fair indications of time within the century, and ceramics and numismatics afford a general and in many cases an accurate guide to their epoch of production; but beyond these there is no datum which archæologists agree in admitting to the witness-box. Philologists rarely bring themselves to a profound interest in prehistoric questions, because the moment they step out of the range of the light which comes from literature, all evidence is to them too vague to be trusted as real; coinage hardly runs into the prehistoric, and pottery is too provincial to be a guide to epoch.

The introduction of letters, as might be understood, furnishes the indispensable condition to the permanence of tradition; and as a matter of fact, I believe the distinction between the purely mythical and the personal, *i. e.*, historical, must be drawn at that epoch. If we examine the traditions of the classical world with reference to this distinction, we shall find that from a date not long subsequent to the Trojan war (or that ethnical movement which is so symbolized)* genealogy and chronology become consistent and normal, while prior to that they are so mingled with myth that it is impossible to distinguish any individuality—persons representing dynasties, nations, or even epochs.† Thus Zeus, type of the entire Pelasgic civilization and religion, is represented as born in Arcadia (Pausanias VIII. 38, 41) and in Crete, as well as in Italy, where was situated the kingdom of his father, the realm of the seven Saturnian cities; while the earliest tradition of his worship is in Dodona—the interpretation being, that the Pelasgi, originating in Thessaly, formed empires in Italy, the Peloponnesus, and Crete, being the first civilizers in those regions ("La légende et l'histoire en Thessalie," Paul Monceaux, *Revue des Études Grecques*, April–June, 1888). It is, however, only after the return of the Greeks from Troy that we begin to get legitimate genealogies of the kings even of Greece; before that, the gods were always responsible for the birth of all greatness; Hercules in the Peloponnesus and Minos in Crete being the sons of Zeus, and both being really types of epochs of civilization, of organization of labor and public works; Dædalus being the arts developed in Crete through the union of the Pelasgic and Asiatic elements (symbolized in the rape of Europa by Zeus) and their joint establishment in that island (Schubring, 'History of Agrigentum,' "Dædalus, representative of the Pelasgic arts").

First of all, and long anterior to the Dædalian stage, was the Herculean, *i. e.*, the Pelasgic civilization in the Peloponnesus; Hercules being fabled as born at Tiryns, which, so far as can be determined by the structure, was the first Pelasgic city in the peninsula. Mycenæ could not have been much later, and in the remains there, still to be seen, are the technical evidences of an antiquity of which we can have but a very vague conception. The great tomb known as the Treasury of Atreus is familiar to all who have visited Greece, and has been to me for more than twenty years, but it was only after a long study, the result of repeated visits, that I began to realize the importance of it; and only now that I have been able to examine the ruins most recently uncovered by the excavations of the Archæological Society have I begun to form an idea of the comparative chronology of the city. This tomb (if it is a tomb) is a structure of the flourishing period of the Pelasgic rule, and, except the walls, is the only remains of that time. It is built of a hard conglomerate found in the vicinity, and the lintel of the door is composed of two stones, of which the inner one (which carries the weight of the stone above itself) weighs about 150 tons, and has been worked without the aid of cutting tools. So have all the minor stones in the structure, which have been split, hammered into shape, and then polished by trituration. Inside are to be seen numerous drill-holes, in some of which are the remnants of bronze nails employed to fasten on the bronze plates which formed a lining to a part of it at least. In the conglomerate occur occasional fragments of the opaque cornelian used by the archaic Italian gem-cutters for their scarabæi, and which after them were the favorite material of the Etruscans for the same purpose. These still retain a brilliant polish and project from the surrounding surface nearly a line. The other material has been corroded away by the action of the elements so equally that, wherever the cornelian appears, it has about the same relief. The original surface of the limestone has entirely disappeared, leaving the harder stone only to tell the manner in which it was worked, with a secondary indication in the depressions left in the splitting of the stone; and the ensemble shows clearly that no chisel could have been employed. For the rest, we have ample proof in later work that the cutting of stone was not practised till long after. I am speaking now of the interior of the building, which must have had the minimum of exposure to the elements. The entrance of the tomb, which was never intended to be covered in, was ornamented with an architectural façade of some sort, apparently. Two pilasters at the sides of the doorway are indicated, and the base of one of these pilasters, in a ruined condition, is still lying at one side of the entrance, the condition of its surface corresponding to the general condition of the front of the tomb. But this façade has been restored in later times, and the bases of the new pilasters are in their places. They seem to me to indicate that the work was possibly never finished; but, if finished, it must also have been done before the builders had learned to cut stone, for though of a gray marble not nearly so hard as the harder nodules in the conglomerate, they

* I offer no views on any question connected with this subject, it being entirely immaterial to my study what the Trojan war was, or who Homer or his authority.

† Pausanias VIII. 6, "And as to the nation [Arcadians] generally, their most ancient event is the war against Ilium."

are only roughed out with the stone-saw. The faces of the door-jambs, which are slightly recessed, are also redressed with the saw, but it is clear that it has been done on an old surface, and the demarcation between the two is perfectly recognizable to the slightest scrutiny.

Now, what I want to call attention to particularly is the fact that, though the original surface of the stone, inside and out, of the tomb is entirely corroded away by the elements, the saw-marks of the restoration are as fresh as if they had been made only a few months or days, not a line or scratch being effaced. The workmen sawed in at right angles till the cuts nearly met, when they broke out the resulting prism, and the fracture is sharp and crystalline still! But the stone saw was not introduced into Greece till the seventh (or possibly the eighth) century B. C., so that this restoration of the ancient tomb could not have been earlier than the Achaian dominion. There are no chisel-marks, so it could not have been later than the sixth century B. C., for we have abundant proof that at that time the Greeks were fully in possession of the stone-cutter's art. It was in all probability, then, of the interval between the sixth and the eighth. The absence of chisel-marks might be accounted for by an unfinished state of the work; but the second tomb, between this and the city, is largely of the same workmanship, and, so far as I could see, has no chisel-work on it; and the same is true in a more unmistakable manner of the relief over the Lion gate, which was done, no doubt, with the best art of its day. The stone has been sawn out, and the relief has been done with a drill, and with trituration for the finishing, and the drill-marks are clearly visible still. The right-hand jamb of the gate shows slight marks of what may have been a saw; but I am inclined to think that the gate itself, substantially as it stands, is of early work, as the sally-port certainly is, the lintel being fitted on with a mortice and tenon, rudely broken out—a difficult job, which, at least so far as the tenon is concerned, would have been very easy with the saw. Moreover, the jambs and lintel are clearly enough old work. There are also some fragments of half-worked stone of the same kind in the outer court of the city, thrown aside when the interment was made which Schliemann discovered (or, rather, which Stamatakis discovered, for, in the actual finding of the remains and treasure, Schliemann had no responsibility), which have the saw-marks and fracture quite fresh. The same holds true at Tiryns, where the jamb of the great gate is still standing of old work, and the fragments of the sawed stone from the later city which were employed in the reconstruction which Schliemann mistook for the archaic palace, the residence of Proetus, are to be seen in various parts, being stones extracted from the ruins and utilized long after.

Between the construction of the old tomb and the restoration there must have been a lapse of many centuries. The former belongs to the archaic city, the Pelasgic Mycenæ; and we know that between the Pelasgic dynasty and the Achaian there was the Danaid and the Pelopid. The Achaian, being at its prime at the epoch of the Trojan war, coincides with the period to which I pointed above as the demarcation between mythology and history, and the earliest documents in regard to which are the Homeric poems. Beyond that we have absolutely no other criterion of the lapse of time than the contrast between the corroded surface of the earliest work on this tomb and the fresh and crystalline surface of the Achaian restoration. But if we might make a rule of three of it, and ask if the lapse of twenty-five centuries (or, if we suppose that the later stone was worked the day before Mycenæ was destroyed by the Argives, more than twenty-three) has produced so slight an effect on the surface of cut stone, how long would it take to produce the utter obliteration of the worked surface which we find in the older work? The only answer we can make is, that the calculation defies arithmetic, even beggars guess-work.

In the recent excavations, conducted by the most intelligent and experienced of the official Greek working archæologists, Tsountas, there has been discovered on the summit of the acropolis of Mycenæ the ruins of a palace which I am fully persuaded belongs to the period of the great Mycenæan rule, built of beautifully polished blocks of stone with marble floors and what was once a grand stone staircase. It is so far only a vestige, but enough to judge of what it must have been. I am not bold enough or easy enough in my beliefs to call it Agamemnon's palace, nor should I carry it so far into the debatable times; but I am ready to attribute it, on the present evidence, to the time when the lions were put over the gateway—probably to the height of the prosperity of the city. It is only incompletely excavated as yet, and, when entirely disengaged from the débris of later constructions over it, may be far more significant than it seems now. As it is, however, I consider it the most important relic of the heroic age for technical study we have yet found in all Greece—not Agamemnonian, but perhaps Homeric, and probably standing when Mycenæ was overthrown after Platæa, for, so far as we know, Mycenæ had never before been taken, its walls being considered impregnable, so that it was finally starved out. That it was utterly ruined we are told by Strabo and Pausanias both, and this has been long admitted as the historical end of the city; but the excavations have shown that it was inhabited again, for this ruin has been reconstructed after a rude fashion, and fitted for human residence, and then again ruined and reconstructed—perhaps more than once. On the very summit, too, is the trace of a wall indicating that a building stood there, which Dr. Dörpfeld has set down in his plan of the excavations as an Hellenic temple. But besides the parallelogram of the foundations, there is nothing to indicate that it was a temple, or the epoch to which it belonged. That it was not a Christian church is clear from its plan, but not a trace of column or capital remains to show that it was a temple, or of what epoch, if a temple. Round the foundation walls, however, were found tiles stamped with the town mark, showing that it was probably a public building, and the characters are those of the first or second century A. D. Among this débris was an inscription, apparently of the second century B. C., acknowledging a gift of 500 drachmas to the town, and one of the time of Nabis, tyrant of Sparta, rendering him thanks for the liberation of a number of citizens of Mycenæ, which is thus shown to have been reoccupied and inhabited possibly for four centuries subsequent to its supposed abandonment. That the structure supposed to be a temple could have been left standing by the Argives is impossible, for it is constructed partly over the palace I have spoken of, which was clearly burned; and that it was occupied in the second century A. D. is shown by the roof-tiles round it. By the inscription found near it, it is indicated as the locality used for the publication of decrees down to the Roman conquest. It must therefore have been a construction of the reoccupation, as its poor and unsubstantial foundations suggest.

On the hypothesis that it was of a temple of the fifth or sixth century B. C., this foundation wall was used as an argument in the discussion between Schliemann and myself, on the antiquity of the ruin on Tiryns, to show that the rubble walls under it must be archaic, and that therefore the rubble walls of Tiryns were equally so. But not only does not the argument hold, through the demonstration of the late period of the supposed temple, but the similarity between the walls in question does not obtain. Those of Mycenæ in question are of rubble and mortar, and are probably of the last centuries B. C., but those of Tiryns contain brick as well as mortar and the ruins of a Byzantine chapel, and the site was covered over with fragments of Byzantine pottery.

The general conclusion is the same for both cities. Mycenæ was reoccupied by a poverty-stricken population returned to their ancestral homes and profiting by the still strong walls, which it is easy to see have been repaired, and the ruins of the ancient houses. Tiryns was only reoccupied by the Byzantine colony who were its last inhabitants; in both cases the colonists utilized the stones of the ancient constructions so far as they would work in, but in Mycenæ there is a trace of the ancient house-wall to give an idea of the architecture, while in Tiryns there are only some door-sills and fragments of sawn stone of the Achaian epoch; of the ancient walls not a trace. The presence of well-burned brick laid in mortar is conclusive on this point, and of this I was able at this visit to satisfy Mr. Tsountas, who accompanied me in the review. The Byzantine character of the ruin has always been admitted by the principal Greek archæological authorities.

But what we may yet learn from the excavations in Mycenæ is hardly to be conjectured, for thus far only a small portion of the acropolis has been cleared out. Another gate connected with a gallery resembling those of Tiryns has been opened, and a series of tombs excavated in the solid rock, but resembling in plan the great tomb, have been discovered. In them occur many of those curious engraved gems known as "island stones," resembling in the character of design the relief on the lion gate and practically establishing the conclusion that they are the work of the same art.* They are not Phœnician, and so far they are mainly found in the isles of the Greek archipelago, and especially in those to which we know that the Cretan civilization extended. No inscribed articles have been found in them, but some ivory carvings have a decided Assyrian character. Tsountas believes that there are many more to be opened, and as a fair proportion of

*These gems furnish one of the most interesting technical problems of prehistoric archæology. They are of archaic workmanship and of the leatoid or scaraboid shape, with a perforation showing that they were intended to be used as seals. The cutting, though of widely varying character of archaism, is always masterly, and those found in the tombs at Mycenæ are of great range of workmanship, and mostly of the monumental design of which the lion relief is an example universally known. Two or three of these, indeed, closely resemble that monument, and the lion is a favorite element in the design. Two lions reared with the fore feet on an altar occur twice in the collection made by Tsountas, with others of other animals in the same relation. The lion tomb in Phrygia is another well-known case, and it has been adduced as a proof that the art came from Phrygia; but Prof. Ramsay, who discovered it, is of the opinion that it is later than the relief of Mycenæ, and that the art of which it is one of the examples came from the west in a developed state. See the interesting article by Prof. Ramsay in the *Journal of Hellenic Studies* for October, 1888, which has just reached me, and some of the conclusions in which are curiously near to some of my own formed on other grounds and prior to having read his paper. He says: "If the date which I assign to the Phrygian monuments, viz., the two centuries preceding 675 B. C., is accepted, I do not think it is allowable to place the Mycenæan gateway earlier than the ninth and it is more likely to belong to the eighth century." In conversation with him I had learned the opinion he had formed, but knew nothing of the grounds for it, and the article to which I call attention I have only read since the above letter was written. I am, however, disposed to differ with him in one point, and that a most important one: I should refer the art to which we owe both the monuments in question to Crete for its beginnings, and consider it an offshoot of the Dædalian.

them are found to be virgin, there is a good chance still of finding something to throw light on their provenance, which I am confident is at least not Phœnician. Tsountas is now at work on a large tomb of the same character near Sparta which has the appearance, so far as explored, of never having been plundered. I hope to be present at the final clearing.

W. J. Stillman.

HARRIET SHELLEY AND CATHERINE NUGENT.—II.

Dublin, May 11, 1889.

XI.—Harriet Shelley to Catherine Nugent.

Tan-y-rallt, Jany. 16th [1813].

My dear Mrs. Nugent,

The sight of your well known hand was like intelligence from the dead to the living. Shall I say that it gave me only pleasure? no, that is too cold a word to convey the feelings of happiness, in which we all alike participated. I am sorry to hear you have been so much engaged, as I cannot bear the idea of a woman like yourself being obliged to do that which so many are better qualified to perform. I saw with very great sorrow the ruin of so many of your valuable manufactories. I knew how many of your unfortunate countrymen suffered all the miseries of famine before, and now there must be many more. That the wounds of thy beloved country may soon be healed for ever, is the first wish of an Englishwoman who only regrets her being born among those inhuman beings who have already caused so much misery wherever they turn their steps. All the good I wrote of Mr. Madoco I recant. I find I have been dreadfully deceived respecting that man. We are now living in his house, where formerly nothing but folly and extravagance reigned. Here they held their midnight revels, insulting the spirit of natures sublime scenery. The sea which used to dash against the most beautiful grand rocks, for grand indeed they are, and the mind is lost in contemplation of them towering above one another, and on the opposite side the most jagged mountains, whose peaks are generally covered in clouds, was to please his stupid vanity and to celebrate his name, turned from its course, and now we have for a fine bold sea which there used to be, nothing but a sandy marsh uncultivated and ugly to the view. How poor does this work of man seem when standing on one of the mountains we see them all rising one behind the other looking as tho they had stood the iron grasp of time many centuries. Then to look down on this embankment which viewed from the height looks as if a puff of wind from the mountains would send it to oblivion like its founder's name. The harm that man has done through his extravagance is incalculable. Here he built the town of Tremadoc and then almost ruined its shopkeepers by never paying their just debts. We have been the means of saving the bank from utter destruction, for which I am extremely glad, as that person who purchases it will reap very great benefit from it. I admire your song much, and am determined to set it to some very plantiff tune. I have seen Miss Curran: she resides in England. What I saw of her I did not like. She said begging was a trade in Dublin. To tell you the truth she is not half such an Irishwoman as myself, and that is why I did not feel disposed to like her. Besides she is a coquette the most abominable thing in the world. I met her at Godwin's house alas [paper torn] Godwin he too is changed, and filled with prejudices, and besides too he expects such universal homage from all persons younger than himself, that it is very disagreeable to be in company with him on that account, and he wanted Mr. Shelley to join the Tory party and do just as they pleased, which made me very angry, as we know what men the Tories are, now. He is grown old and unimpassioned, therefore is not in the least calculated for such enthusiasts as we are. He has suffered a great deal for his principles, but that ought to make him more staunch in them, at least it would me. Eliza and Percy desire their kind regards to you with many thanks for your embassy to Stockdale, who will hear from Mr. S. soon. Adieu, dearest friend to liberty and truth, and that you may ever be happy is the first prayer of your affectionate friends

H. Shelley.

XII.—Harriet Shelley to Catherine Nugent.

May 21st [1813] Cooke's Hotel, Albermarle-Street, London

My dear Mrs. Nugent

I find the longer a time elapses before I make my apology for not having written before, the more awkward I feel at the idea of addressing you. My greatest consolation, however, is derived from this—that you will not attribute my silence to neglect, but to the hurry and bustie of a city. I am ashamed to say I have written to no one since I arrived here, if that can extenuate my crime. You would pardon me if you knew in what a scene of confusion I live. To give a description of it is impossible. Even now there are two waiters in the room to lay our cloth for dinner, and you well know the movements of a waiter are far from silent. I have been in London a long time, though it seems to me that I have only been here a few days. Mr. Shelleys family are very eager to be reconciled to him, and I should not in the least wonder if my next letter was not sent from his paternal roof, as we expect to be there in a week or two. His father has been in town, when, at the earnest solicitation of his cousin, Bysshe wrote to him. He has not yet answered the letter; but we expect it daily. Their conduct is most surprising, after treating us like dogs they wish for our Society. I hope it will turn out well, tho' I hardly dare suppose so. My sister has joined me some time. You may suppose I was not a little pleased to see her again. We have not got our boxes yet, that were sent from Cork to Bristol, and when we shall see them again is uncertain. Mr. Ryan dines with us to-day. I give him meat, but we have all taken to the vegetable regimen again, which I shall not leave off, for I find myself so much better for it, that it would be very great injustice to eat flesh again. Have you seen Mr. Lawless? He wrote to us from prison a few weeks ago, but I do not suppose he was there, because Ryan knew nothing about it, and he is only just arrived from there. This is franked by La Touche, for I feel it is not worth postage, I hope to hear from you soon, tho' I feel I do not deserve it; but you are too kind to take any advantage over me. Mr. Shelley continues perfectly well, and his poem of Queen Mab is begun, tho it must not be published under pain of death, because it is too much against every existing establishment. It is to be privately distributed to his friends, and some copies sent over to America. Do you [*sic*] any one that would wish for so dangerous a gift? If you do, tell me of them, and they shall not be forgotten. Adieu! All unite in kind regards to you, and I remain your sincerely attached friend

H Shelley.

Direct to this hotel

XIII.—Harriet Shelley to Catherine Nugent.

June 22d [1813] Cookes Hotel, Dover Street, Piccadilly

My dear Mrs. Nugent,

The kind expressions contained in your last letter gave me sincere pleasure, feeling as I did that I had not acted according to my ideas of right and wrong in delaying writing to you. I am sorry to hear that poor Lawless is confined. If he had taken his friends advice all his debts would have been settled long ago; but pride, that bane of all human happiness, unfortunately stopped, and marred all his good prospects, Mr. Ryan is still in London; but I expect to hear daily of his leaving us Have you had any good weather, for ours is miserable? our summer has not yet commenced, The fruit is still sour for want of sun, and will continue so from the present appearance of the weather. Our Irish servant is going to leave. Poor fellow, he pines after his dear Ireland, and is at the same time very ill. He was never of any use to us; but so great was his attachment that we could not bear to send him away. Mr. Shelley has broken off the negociation, and will have no more to say to his son, because that son will not write to the people of Oxford, and declare his return to Christianity. Did you ever hear of such an old dotard? It seems that so long as he lives, Bysshe must never hope to see or hear anything of his family. This is certainly an unpleasant circumstance, particularly as his mother wishes to see him, and has a great affection for him. What think you of Bonaparte? To most of the Irish he is a great favorite; I only wish we had peace. So long a war as this has been is indeed too dreadful to continue much longer. How is your health? I am afraid you sit too close to your business, to enjoy good health, yet, as the winter is gone, surely you need not make any more warm tippets! That will be time enough next November. We have not seen much of Godwin, for his wife is so dreadfully disagreeable that I could not bear the idea of seeing her, Mr. S. has done that away, tho' by telling G. that I could not bear the society of his darling wife. Poor man, we are not the only people who find her troublesome. Mr. S. joins me and Eliza in kind regards to you, and believe me yours with esteem

H. S.

XIV.—Harriet Shelley to Catherine Nugent.

August 8th [1813] High Elms House, Bracknell, Berkshire

My dear Mrs. Nugent

I confess I have been guilty of seeming unkindness in not writing before; but such a multiplicity of business has occupied me ever since the receipt of your last that I have not had a moment to spare, even to you, my kind friend. The babe is quite well, and very much grown. She is indebted to you for many kind enquiries, which one day she will thank you for in person. Mr. S. is of age; but no longer heir to the immense property of his sires. They are trying to take it away, and will I am afraid succeed, as it appears that there is a flaw in the drawing up of the settlement, by which they can deprive him of everything. This is a beautiful idea, and well worthy the noble men who have formed it, among whom I suspect a certain *great personage*. They have put it into Chancery, tho' I fancy it can and will be kept an entire secret, you may suppose that he will do everything to prevent this shameful abuse of property, as we are convinced that more good would be effected if we have it, than if they regain it. We are now in a house 30 miles from London, merely for convenience. How long we remain is uncertain, as I fear our necessities will oblige us to remove to a greater distance. our friends the Newtons are trying to do everything in their power to serve us; but our doom is decided. you who know us well may judge of our feelings. To have all our plans set aside in this manner is a miserable thing. Not that I regret the loss, but for the sake of those I intended to benefit. Mr. S. unites with me and Eliza in kind regards, whilst believe me your firmly attached friend,

H. S.

XV.—Harriet Shelley to Catherine Nugent.

Sept. 10 [1813], High Elms House, Bracknell, Berks.

My dear Mrs. Nugent

I hasten to answer your last letter and to give you the same hopes which we entertain about the subject of my last. Mr. Shelley has seen his Father and told him of what he heard, which he denied, and received him very kindly. Since then his lawyer has employed a council [*sic*] His opinion is at present pending. I have no doubt now, tho' I had at first, that they can take it away. I have a very bad opinion of all lawyers in general, and I rather think Mr. S's lawyer was either told so by some one, or he thought it necessary to employ a council. They are for ever playing a losing game into each others hands. I am very sorry to hear you have been so ill. I hope sincerely you will soon recover, and do not, I pray you, sit so close to your business, for it is not one that contributes to the happiness of the many, only the few, who ought not in my opinion, to indulge in such useless luxuries at the expense of so many who are even now at a loss for food. Of late we have had many arguments concerning the re-

spect that all men pay to property. Now what do you think of this affair? I wish much to know if your ideas on this subject correspond with ours? I will not tell you what they are yet as I have an excellent reason which you will acknowledge when you hear it. The post has just brought me a letter from Mr. Shelley's sister, who says that her father is doing all in his power to prevent his being arrested. I think even his family pride must long to give way on the present occasion. [Paper torn] keeps everything a secret, but Mrs. Shelley tells her son everything she hears. I will write again soon and tell you everything that takes place. With every good wish for your happiness, in which we all unite, believe me most affectionately your friend, H. SHELLEY.

We think of going to our favourite Nantgwilt but not yet. you will certainly hear from me again at this house before we can go. Let me hear from you soon.

XVI.—Harriet Shelley to Catherine Nugent.

SUNDAY, October 11th [1813].

My dear Mrs. Nugent,

We are again among our dear mountains. One week has sufficed to perform a journey of more than 300 miles, with my sweet babe, who I am most happy to say has received no injury from the journey. I am now staying at Lowwood Inn, which is close to the Lake of Windermere in Westmoreland. We do not wish any one to know where we are. Therefore if any one should ask you I rely upon friendship for not satisfying their curiosity. Have you seen Daniel? We were obliged to discharge him, for his conduct was so unprincipled that it was impossible to have him in our service any longer. Is Mr. Lawless out of prison yet? Had he not taken us in as he did, Bysshe would have done something for him; but his behaviour was altogether so dishonest that Mr Shelley will not do anything for him at present. If he wished it he could not, for he is obliged to pay 3 for 1 which is so ruinous that he will only raise a sufficient to pay his debts. In November he is to see his father; but I do not expect they will settle anything, for Mr. S. will never give way to his son in the least. How has your health been since I heard from you last? I sincerely hope you are better, and that you will take care of yourself. I wish you could see my sweet babe. She is so fair, with such sweet blue eyes, that the more I see her the more beautiful she looks. Some day, my dear friend, I hope you will come to England, and pay us a visit. When we get our dear Nantgwilt; then I may make sure of you. Mr. S. joins me and Eliza in kind regards to you, and may you ever be happy is the best and first wish of your sincere friend.

H. SHELLEY.

Direct your letter to me at Mrs. Calverts, Greta Bank, Keswick, Cumberland.

XVII.—Harriet Shelley to Catherine Nugent.

EDINBURGH, October 20th [1813].

My dear Mrs. Nugent,

My last letter was written from the lakes of Cumberland, where we intended to stay still next; but not finding any house that would suit us we came on to this far-famed city. A little more than two years has passed since I made my first visit here to be united to Mr. Shelley. To me they have been the happiest and the longest years of my life. The rapid succession of events since that time make the two years appear immeasurably long. I think the regular method of measuring time is by the number of different ideas which a rapid succession of events naturally give rise to. When I look back to the time before I was married I seem to feel I have lived a long time. Tho' my age is but eighteen, yet I feel as if I was much older. Why are you so silent, my dear friend? I earnestly hope you are not ill I am afraid it is nearly a month since I heard from you. I know well you would write oftener if you could. What is your employment on a Sunday? I think on those days you might snatch a few minutes to gratify my wishes. Do not direct your letter to me at Mrs. Calverts; but to the post office in this city. We think of remaining here all this winter. Tho' by no means fond of cities, yet I wished to come here, for when we went to the lakes we found such a set of human beings living there that it took off all our desire of remaining among the mountains. This City is, I think, much the best. The people here are not so intolerant, as they are in London. Literature stands on a higher footing here than anywhere else. My darling babe is quite well, and very much improved. Pray let me hear from you soon. Tell me if I can do anything for you. Mr. Shelley joins me and Eliza in kind regards to you, whilst I remain your affectionate friend H. S.

Do not tell anyone where we are.

XVIII.—Harriet Shelley to Catherine Nugent.

No 36 FREDERICK-STREET EDINBURGH
[Postmark 23 Nov. 1813.]

My dear Mrs. Nugent

Your letter called forth the most lively feelings of regret. It is so long since I received a letter from you that I began to feel the greatest anxiety on your account. How much do I feel for your ill state of health. Tell me if I can be of any service to you. How are you situated with respect to personal comfort and attendance? Have you anyone by you who can sympathize with you? If you have not let me come and attend you. It is the office of a friend to soothe the languid moments of illness. The mind looks for sympathy more at such a time than when in perfect health. I am afraid Lawless has practised upon you, as he did upon us. Some time back he wrote to Mr S. about Daniel, who lived with us, saying we had not treated him well. Now the truth is this—we were very fond of this man. He appeared so much attached to us, with so much honesty and simplicity, that we kept him tho' of no use whatever. For the whole time he stayed with us he never did anything. Afterwards he turned out very ungrateful and behaved so insolently that we were obliged to turn him away. This is the man Lawless wrote about; but do not think I am offended at what you say of him, as I know it proceeds from the goodness of your heart. I only wish the object was more deserving of your kindness. There has been no conciliation between Mr. [paper torn] his father. Their opinions are so contrary that I do not think there is the least chance of their being reconciled. His father is now ill with the gout; but there is no danger I suppose. If there was he would send for his son, and be reconciled to him. I sincerely hope this will find you better. You know what pleasure it would give me to render you any service. Therefore do not let a false opinion of justice keep you from applying to me in anything in which I can serve you. Mr. Shelley and Eliza join me in all good wishes for the recovery of your health, and believe me the most firmly, your attached friend,

H SHELLEY.

XIX.—Harriet Shelley to Mrs. Newman.

Madam,

It is so long since I have heard from my amiable friend Mrs Nugent, that I begin to fear she has quitted this world of sorrow and pain. If she has, no human being will regret her loss more than myself. I must beg you to write by return of post and tell me all the particulars. If I am wrong in my conjectures tell her to write if only one line to her most attached and faithful friend,

H. SHELLEY.

23 CHAPEL STREET GROSVENOR SQUARE
August 8th [1814]

XX.—Harriet Shelley to Catherine Nugent.

August 25th [1814]
23 CHAPEL STREET

My dear Mrs. Nugent,

I am afraid you will think I am not sincere, when I tell you what pleasure the sight of your handwriting caused me. I think as you do with the greatest horror on the present state of things—giving the slave trade to France for seven years. Can anything be more horrible? Peace has been hardly purchased at this price. I am dreadfully afraid America will never hold out against the numbers sent to invade her. How senseless all those rejoicings are! Deluded beings, they little know the many injuries that are to ensue. I expect France will soon have another revolution. The present King is not at all fitted to govern such a nation. Mr. Shelley is in France.* You will be surprised to find I am not with him; but times are altered, my dear friend, and tho' I will not tell you what has passed, still do not think that you cloud my mind with your sorrows. Every age has its cares. God knows, I have mine. Dear Ianthe is quite well. She is fourteen months old, and has six teeth. What I should have done without this dear babe and my sister I know not. This world is a scene of heavy trials to us all. I little expected ever to go through what I have. But time heals the deepest wounds, and for the sake of that sweet infant. I hope to live many years. Write to me often my dear friend you know not what pleasure your letters give me. I wish you lived in England that I might be near you. Tell me how you are in health. Do not despond. Tho' I see nothing to hope for when all that was virtuous becomes vicious and depraved. So it is—nothing is certain in this world. I suppose there is another where those that have suffered heavily here will be happy. Tell me what you think of this. My sister is with me. I wish you knew her as well as I do. She is worthy of your love. Now, dear friend, may you still be happy is the first wish of your ever faithful friend,

H. SHELLEY,

Ianthe is well and very engaging

XXI.—Harriet Shelley to Catherine Nugent.

My dearest Mrs. Nugent,

Your fears are verified. Mr Shelley has become profligate and sensual, owing entirely to Godwin's "Political Justice." The very great evil that book has done is not to be told. The false doctrines therein contained have poisoned many a young and virtuous mind. Mr. Shelley is living with Godwins two daughters—one by Mary Wolstonecraft, the other the daughter of his present wife, called Clairmont. I told you some time back Mr. S. was to give Godwin three thousand pounds. It was in effecting the accomplishment of this scheme that he was obliged to to be at Godwins house, and Mary was determined to secure him. She is to blame. She heated his imagination by talking of her mother, and going to her grave with him every day, till at last she told him she was dying in love for him, accompanied with the most violent gestures and vehement expostulations. He thought of me and my sufferings, and begged her to get the better of a passion as degrading to him as herself. She then told him she would die—he had rejected her, and what appeared to her as the sublimest virtue was to him a crime. Why could we not all live together? I as his sister, She as his wife? He had the folly to believe this possible and sent for me, then residing at Bath. You may suppose how I felt at the disclosure. I was laid up for a fortnight after. I could do nothing for myself. He begged me to live. The doctors gave me over. They said 'twas impossible. I saw his despair. The agony of my beloved sister; and owing to the great strength of my constitution I lived, and here I am, my dear friend, waiting to bring another infant into this woful world. Next month I shall be confined. He will not be near me. No, he cares not for me now. He never asks after me or sends me word how he is going on. In short the man I once loved is dead. This is a vampire. His character is blasted for ever. Nothing can save him now. Oh! if you knew what I have suffered, your heart would drop blood for my miseries. When may I expect to see you? Do tell me, my dear friend, and write soon. Eliza is at Southampton with my darling babe. London does not agree with her. Will you enquire for a family of the name of Colthurst in Dublin? There is one son and daughter growing (?) up living with the mother. I want the direction, as I know them very well. Adieu, my dear friend, may you be happy is the best wish of her who sincerely loves you H. SHELLEY

23 CHAPEL STREET GROSVENOR SQUARE
November 20th [1814].

* Shelley eloped with Mary Wollstonecraft Godwin the previous month.

XXII.—Harriet Shelley to Catherine Nugent.

Write very soon and tell me if you have received my last letter

My dearest Mrs. Nugent,

I have been confined a fortnight on Wednesday. Ianthe has a brother. He is an eight month's child and very like his unfortunate father, who is more depraved than ever. Oh my dear friend what a dreadful trial it is to bring children into the world so utterly helpless as he is, with no kind father's care to heal the wounded frame. After so much suffering my labour was a very good one, from nine in the morning till nine at night. He is a very healthy fine child for the time. I have seen his father: he came to see me as soon as he knew of the event; but as to his tenderness for me, none remains. He said he was glad it was a boy, because he would make money cheaper. You see how that noble soul is debased. Money now, and not philosophy is the grand spring of his actions. Indeed the pure and enlightened philosophy he once delighted in has flown. He is no longer that pure and good being he once was, nor can he ever retrieve himself. You will see us all in the Spring; I am about to come to Ireland, to get my boxes which are detained there. You shall then return with me to England, my dear friend, which you have often promised, and I will promise Mrs. Newman not to keep you any longer than you like to stay. God bless you, my dearest friend till we meet. Let me hear from you soon. Eliza sends her love to you, and Ianthe too. May you be happy is the first wish of her who loves you sincerely. H. SHELLEY.

23 CHAPEL STREET, GROSVENOR SQUARE
Decr. 11th [1814].

XXIII.—Harriet Shelley to Catherine Nugent.

January 24th [1815].

My dear Mrs. Nugent,

I am sorry to tell you my poor little boy has been very ill. He is better now, and the first spare time I devote to you. Why will you not come to England, my dear friend, and stay with me? I should be so happy to have you with me. I am truly miserable, my dear friend. I really see no termination to my sorrows. As to Mr. Shelley, I know nothing of him. He neither sends or comes to see me. I am still at my father's which is very wretched. When I shall quit this house I know not. Everything goes against me. I am weary of life. I am so restrained here. That life is scarcely worth having. How I wish you were here. What will you do, my dear Catherine? Now those Newmans retire you will not like to go to another house of business. The few years you have to live may surely be passed more pleasantly. Do now make up your mind at once to come and stay with me. I will do everything to make you happy. For myself happiness is fled. I live for others. At nineteen I could descend a willing victim to the tomb. How I wish those dear children had never been born. They stay my fleeting spirit, when it would be in another state. How many there are who shudder at death. I have been so near it that I feel no terrors. Mr. Shelley has much to answer for. He has been the cause of great misery to me and mine. I shall never live with him again. Tis impossible. I have been so deceived, so cruelly treated, that I can never forget it. Oh no, with all the affections warm, a heart devoted to him, and then to be so cruelly blighted. Oh! Catherine, you do not know what it is to be left as I am, a prey to anguish, corroding sorrow, with a mind too sensitive to other's pain. But I will think no more. There is madness in thought. Could I look into futurity for a short time how gladly would I pierce the veil of mystery that wraps my fate. Is it wrong do you think, to put an end to ones sorrows? I often think of it—all is so gloomy and desolate. Shall I find repose in another world? oh grave, why do you not tell us what is beyond thee? Let me hear from you soon my dear friend. Your letters make me more happy. Tell me about Ireland. You know I love the green Isle and all its natives. Eliza joins in kind love to you. I remain your sincere but unhappy friend H. SHELLEY

CHAPEL-STREET.

This is the last we have. It is impossible for any one, above all for an Irishman, to rise from a perusal of the foregoing letters without feeling overwhelming, if not indignant, sympathy with Harriet Shelley. They are the effusions of a sweet, true, confiding, noble nature. She committed suicide in November, 1816.

Catherine Nugent continued to live a member of the Newman household after Mr. Newman retired from business. My father, Richard Davis Webb, was admitted to her friendship while he was yet an apprentice to the printing business. She became one of his most intimate friends. He thus refers to her in two letters :

[November, 1826.] "William Allen [a distinguished member of the Society of Friends] is expected in town to-day, and Catherine Nugent is coming to meeting to see him. . . . She is a wonderful woman—altho' very plain, little, and republican-looking."

[21st October, 1833.] "Catherine Nugent has amazing spring and elasticity of mind, as if her mind made her forget that she had a very weak body. When I remarked her great intellect, her uncommon quickness—her depth of charity and love of mankind—her utter absence of all personal selfishness—her quiet, unostentatious benevolence—her rapid glance at the true motives of people, and at the real bearing of any matters that come before her—I cannot help feeling a great degree of reverence for her and of attachment to her. Her greatest fault appears to be an unguardedness of language which makes her unscrupulous in her choice of words, so that she says unkind things now and then; but I look on this as a very small fault in estimating her character—though with many she would get off better with many an unamiable flaw in her manners and disposition. . . . [Others] . . . sink below contempt when compared with Catherine Nugent for natural abilities, wisdom in council, or powers of useful and improving conversation, or with Mary Newman in extent of accomplishment and information."

My recollections of Catherine Nugent are shadowy. I felt somewhat in awe of her. She died December 11, 1847, aged 76, and was buried with Mr. and Mrs. Newman in St. Anne's churchyard in this city, where Mrs. Hemans, the poetess, also lies. The grave is directly inside the door leading from Molesworth Street.

The Newmans' only child Mary was devotedly attached to Catherine Nugent. She adopted her niece Catherine L. Nugent. Possessed of ample means, they lived a most retired, reserved life, dreading publicity and availing themselves of few of the wider possibilities and advantages now afforded by money. I felt grieved many years ago when they told me they had destroyed most of Catherine Nugent's correspondence. Mary Newman, a sweet, amiable woman, passed away and was buried in Mount Jerome Cemetery. Catherine L. Nugent continued on in the old house whither the Newmans had retired, and in the midst of the old surroundings all unchanged.

The reference to Catherine Nugent in Mr. McCarthy's book surprised me. He evidently had not identified her. I had never heard of the Shelleys in connection with Catherine Nugent. I applied to her niece. Yes, her aunt had been intimate with them, but her aunt believed Shelley to have acted in such a way to his first wife that she could scarcely bear to think, much less to speak, of him. She could scarcely bear to hear his name mentioned. Miss Newman and she had found letters of Mrs. Shelley to her aunt which she meant to destroy. I persuaded her to let me see them and I carefully made copies.

Catherine L. Nugent now rests with her well-beloved friend, Mary Newman. No members of either family are known to be in existence. There is no reason why the letters should not be given to the public—it is due to the memory of one whom most will believe to have been sorely wronged. It is probable the originals have been destroyed. If in existence, it may be some time before they are available.

ALFRED WEBB.

Correspondence.

JUDGE MATTHEWS'S SUCCESSOR.

TO THE EDITOR OF THE NATION :

SIR: I wish, through the columns of the *Nation*, to contribute one suggestion to the discussion of the vacancy in the Supreme Court of the United States, the filling of which is of such vital importance to the proper organization of that tribunal. It seems to have become the settled policy of the national Executive to have a certain regard, within broad landmarks, for the geographical or sectional location of the various appointees. In so far as this idea rests upon the fact that the tone of men's thoughts is more or less affected by their surroundings, it seems to have met the approval of the great common sense of the people. It is a tradition, and, *me judice*, a correct one, that the Supreme Court of the United States should in a general way embody the prevailing intellectual spirit or temper or mode of thought of the four great sections of our country. But the South differs from the other three. There we find two different modes of thought. These two are widely divergent, not to say antagonistic. But one is in almost exclusive possession of the field, while the other is circumscribed within narrow limits. To obviate possible misunderstanding, and also to avoid going too much into details, I will say that the difference referred to does not involve any long-since exploded dogma of secession, but the various limitations of Federal and State jurisdiction in matters of municipal taxation, the powers of corporations under the inter-State-commerce clause, the enforcement of contracts with quasi-corporations, questions of inland navigation and bridge-building, the operation of the rights of citizenship and the delicate jurisdictional points that inevitably arise in this connection, the election laws in so far as they affect the election of Congressmen, etc. Of these two modes of thought (I can find no more accurately descriptive term than this), the South has a representative of one in Judge Lamar, but none of the other.

The President is credited with a desire to make Republicanism respectable in the South. In pursuance of this policy he has so far appointed only decent and competent men to office in the South. This is certainly true of Tennessee, not excepting his brother, who stands well. He is also credited with a desire to appoint only native Southerners to important offices. This he will not find an easy task in many parts of the South, if he confines himself to Republicans. But his policy itself is unquestionably correct, and it has already caused thoughtful men in the South to put on their thinking-caps. What strange and wonderful thing is this, that the old Federal carpet-bag rings who try to make as few as possible the number of stockholders in the Federal Patronage Company (limited) should be set aside for men without leprosy or spots!

The time seems ripe for the President to make a *coup!* There is one office which has, in only one instance, been considered the reward of partisan service. The successor to that exception is now to be appointed. The South is a fallow field for Republican proselytism. The prevailing tone in the South has its representa-

tive on the Supreme Bench in Judge Lamar. Why not make the other or Republican tone respectable by giving the South a permanent pledge that it is considered respectable by Northern and Western Republicans? Why not prove to ambitious young Southerners that Southern Republicanism opens the doors even to the highest preferment? Why not strengthen the Supreme Court itself and the Republican party in the South by taking a native Southerner, one identified with the South by blood and by education, an undeviating Republican, a man of strong and pure character, a judge of broad legal grasp and of approved experience, still in the very forenoon of his powers, and shake the South to the core by elevating him to the Supreme Bench?

In suggesting the name of Judge Eli Shelby Hammond, now Judge of the Western District of Tennessee, as such a man, I do not wish to be summarily dismissed and consigned to the limbo of the eager enthusiasts who are constantly writing letters and getting up petitions, soliciting the appointment of some local magnate to some monstrously big position, because said magnate is a fish of such uncommon size in the waters of Sixville or Seventown. Few of our Supreme judges have been famous outside of a circumscribed locality before their appointment, but all of them have won the approbation of the lawyers they met at the bar and of the judges before whom they practised. This is the enduring basis; and so much of fame, even in its highest degree, has been won by Judge Hammond. He is the only Southern Republican who, in my eyes, could be seriously mentioned for a place on the Supreme Bench; and apart from any idea he may represent, he is essentially fitted for the place.

He was born in 1838, in Mississippi, of Tennessee parents. He came to Tennessee when a boy. He received a careful classical education, and studied law at the then noted Lebanon (Tenn.) Law School. In 1859 he began the practice of law at Memphis. He supported Douglas in 1860. When the war began, he entered the Confederate Army, in which his record was that of a brave soldier and an efficient officer. For the last two years of the war he was one of Forrest's adjutants; the war over, he resumed the practice of law. He opposed Johnson and his "policy," became a member of the Republican party, and voted for Grant. He held then (and probably still holds) that the true solution of the so-called Southern question lies open to the South through affiliation with the Republican party. In 1878 he was appointed by Mr. Hayes to his present position. His character, his social standing, his ability, and his Republicanism have made him practically the centre of Southern judicial figures. On the bench he has remained the scholar, and the student both of law and of letters. He is probably the best equipped member of the Federal bench for the decision of all questions of Federal jurisprudence, that dark field of Eleusinian mysteries. For this he has received the recognition, not only of those with whom he has sat upon the bench, but particularly of Chief-Justice Waite. Nearly every copy of the *Federal Reporter* contains some one of his opinions. He has also had wide experience in matters of commercial law. Memphis, the largest town in his district, has the third largest purely commercial trade in the United States, the bulk of which is in four different States. Judge Hammond first rendered the opinion which decided the State Railroad Commissions unconstitutional, on the ground that they conflicted with the jurisdiction of Congress in matters of inter-State commerce. This position was afterwards sustained by the Supreme Court. Judge Hammond handed down his opinion in the case of the Louisville and Nashville Railroad Company vs. Railroad Commission of Tennessee, reported in one of the *Federal Reporters*. I have not the reference by me.

In addition to his other qualifications, Judge Hammond is vigorous, young, being only fifty-one years old, and is not only a profound jurist, but also a man of broad views and ripe scholarship. He possesses also that calm equipoise and mental equilibrium which is the foundation-stone of the judicial temperament. From all standpoints, this is the proper, even the ideal, appointment. Perhaps the good judgment of the President may again exemplify the astonishment of the Frenchman at our good luck by putting Judge Hammond upon the Supreme Bench of the United States. Since this seems to be the day of pedigrees, I might add that Judge Eli Shelby Hammond has the best blood of Tennessee in his veins, including that of Eli Hammond, the famous old pioneer, the Harts of Transylvania fame, and Isaac Shelby, the Governor of Kentucky, and one of the heroes of King's Mountain. TENNESSEE.

MEMPHIS, TENN.

TARIFF REFORM.

TO THE EDITOR OF THE NATION:

SIR: It frequently happens that an inmate of a lunatic asylum imagines himself to be the only sane person, and that all the rest of the world has lost its senses. It is perfectly inconceivable to me that people cannot see that tariff reform is not a question of finance, but of politics. You never said anything truer than that "it is no easy task to make an interesting subject for popular instruction out of the Treasury decision on worsteds and woollens." In fact, it is quite impossible to make the public understand or care for tariff reform, in itself, at all. The only thing they ever can or will care for is the one man or the half-dozen men who, in their eyes, represent tariff reform.

Consider how the whole matter stands. It is entirely in the hands of a Committee of Ways and Means in the House and another in the Senate. It would be too much to say that these can carry anything they want, but they can certainly prevent anything from being carried that they don't want. Consider again—and such "damnable iteration" must be excused for its importance—what these committees are. They are, at least as regards the House, appointed by the absolute will of the Speaker, and anybody who can make a Speaker can make a committee. In the Senate they differ only in being elected directly instead of through the intermediate agency of the Speaker. Again, the members come from local districts, say five per cent. of the whole country. They care nothing for the rest of the country, and the rest of the country cares nothing for them. Their single object is to satisfy the most powerful of their own constituents, with a reserve in favor of a similar class in other districts who can give full consideration in return. Add to this that their proceedings are perfectly hidden from public scrutiny.

Awaiting these committees, as soon as they are formed, is a perfectly organized and ever present lobby. Jay Gould is reported to have once said that he did not care to trouble himself about the election of members of the Legislature as it was so much easier to buy them afterwards. The protected interests know perfectly well where to apply their efforts, though they by no means despise the use of money in elections. It is not necessary to charge direct bribery. There are hundreds of other ways in which human nature can be influenced, and it is safe to say that not one of them is unknown to the lobby. And now they have got a new weapon in the Treasury rulings. Thanks to the popular fetish of the separation of the executive and the legislature, the Treasury officials are just as irresponsible as the committees, and both are sinking deeper and deeper into the meshes of the lobby. The proceedings of Naval-Officer Burt, which you set forth a while ago, show what may be looked for in this direction. Impunity is the most perfect manure for such a noxious plant. It is not what exists, so much as what we are coming to, which is the serious matter. Under these circumstances, what is the use of explaining to the public the wrongs of the tariff? Mr. Cleveland's message was probably as powerful an appeal to the country as, under the present system, can ever be made, yet it exploded as harmlessly as a simple charge of gunpowder. The case might be compared to a fortified castle filled with armed men, against which one should bring a vast undisciplined multitude and ask them to storm it without artillery. Till some means can be devised of overcoming the power of the lobby, all agitation for tariff reform is like the crackling of thorns under a pot.

What is this means? It is daylight instead of darkness, publicity instead of secrecy, personal responsibility in place of that diffusion of power which is only a cloak for intrigue, the putting forward the national interest in place of those of localities, the giving to the public interest at least an equal chance with that of private combinations. The Secretary of the Treasury is the only financial official who represents the whole country. It should be his right and his duty to expound on the floor of Congress what the country needs. In his position his little finger would be thicker than the loins of his opponents. He need not resign if defeated, he need not even at first make any definite proposition. A general statement would suffice to rally public opinion and lead gradually to more definite action. And with the demand the man would come who could put public opinion into shape. Sharp Treasury rulings would be impracticable, because they would be pounced upon by hostile critics, and officials would soon learn the danger.

Of course, the lobby and the committees would oppose this and see at once the danger to their schemes. For this reason, it cannot be done in or through Congress; it must be by outside agitation. If only some public man, tired and disgusted with the machinery at Washington, and eager for honorable distinction, would take the stump on this issue and throw himself upon the country, I believe he and everybody would be astonished at the reception he would encounter. G. B.

BOSTON, June 8, 1889.

THE CIVIL-SERVICE LAW NOT A FAILURE.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, "G. B.," under date of June 1, in a letter published in the *Nation* for June 6, suggests that as "civil-service reform in this country has proved a failure," in his opinion, "notwithstanding the elaborate organization of the Civil-Service Commission," the only remedy is to have members of the Cabinet occupy seats in Congress, and be subject to questions from members.

It is well for civil-service reformers to know the advantages of having the power to compel appointing officers to answer questions regard-

ing their appointments, in public, and that power has been a great help to the reform in England—but it is also well to remember two points:

First. The elaborate organization of the Civil-Service Commission has not been a failure. The Commission's organization embraces only about one-fifth of all the Federal offices. The other four-fifths are wholly outside their rules, and all the pressure for office, all the rapid changes, and all the bad appointments occur among these four-fifths outside the pale of the Civil-Service Law. That this is so, see the Railway Mail Service. Up to May 1, when the system was at last put under the rules, the changes made for political purposes went on at a scandalously rapid rate. Since May 1, all has been tranquil, and there is no sign of pressure or politics whatever in that bureau. The testimony of officials whose offices have been included within the organization of the Civil-Service Commission is unanimous that as soon as the change was made, immediately they were relieved from pressure. A very striking illustration of the difference between that part of the service not under the rules and that which is included under them can be drawn from President Cleveland's Administration. In a little less than four years from the 4th of March, 1885, eighty per cent. of the offices *not* under civil-service rules had been changed, and during the same period the changes among those put in under civil-service examinations in the departments were only ten per cent., including deaths, resignations, and all. A close study of the facts makes it clear that the civil-service examinations have been a remarkable success, as far as they have been extended. *The only failure to accomplish the reform has been in those offices to which the civil-service rules have not been extended*—which seems to be an argument for extending those rules, not for abandoning them.

The *second* point is, that, in the English Parliament, though the power to question members of the Cabinet regarding appointments had existed for a long time, it was not till the examination system was established in its full force that the patronage system was abandoned. We have in the history of England the strongest evidence that the power to question the Cabinet is not alone sufficient to accomplish the reform of the civil service.

As in England, so with us, the examination system and the system of calling appointing officers to account publicly and easily would each aid the other. The examination system we have just begun with, and it should be extended and fortified. Just how to accomplish the other is a very grave question.—Yours, etc.

R. H. Dana.

Boston, June 10, 1889.

THE CENTURY DICTIONARY.

To the Editor of The Nation:

Sir: Your recent review of the 'Century Dictionary' ought to be supplemented by some remarks upon its definitions of terms in physical science, while there is still time to make corrections. The definitions in question are, in many cases, insufficient, inaccurate, and confused in a degree which is really remarkable. Take, for example, the description of Ptolemy's 'Almagest,' "a book or collection of problems in astronomy and geometry, . . . so named by the Arabs because it was reckoned the greatest work on these subjects." Far from being a collection of problems, I doubt if there is a single problem in geometry or astronomy in the entire work. In no sense of the word is it a book of geometry, nor could it ever have been considered as such. While thus giving an erroneous description, what the work really is —a system of astronomy based upon the doctrine that the earth remains immovable in the centre of the heavens—is entirely omitted. In a rapid glance through a portion of the published pages (A–Appet), I have noticed a number of other cases of insufficient, erroneous, or misleading definitions or statements. The definition of *albedo* is confused and misleading. That of *eccentric anomaly* is entirely wrong. *Absorption lines* are described as occurring just under the conditions when they are impossible. *Law of action and reaction* is accurate, with the exception of a sentence which is so far wrong that I suspect it to have been interpolated after the original article left the writer's hands. *Apochromatic* is insufficiently defined, and is illustrated by a quotation as unintelligible as could readily be found. *Alidade* and *achromatic lens* contain misstatements less remarkable for their seriousness than for their existence.

So many defects in a single subject and in so small a fraction of the book would seem to indicate that the details of the work are not such as we should expect from the attention and care with which the editor and publishers have devised and executed their part of the plan. It ought to be added that, so far as I have noticed, the definitions in mathematics and mathematical physics are not subject to this criticism.

S. Newcomb.

Washington, June 8.

MORE HARD CASES.

To the Editor of The Nation:

Sir: The "hard case" mentioned by "C. H. W." in the *Nation* of May 9 is not the only one of its kind. The failure of the Boston magazine, *Old and New*, left many of its contributors in the same wretched plight. At the time of the "failure" of *Old and New* the editor owed the writer of this letter $150, and has utterly ignored all requests for payment as well as for the return of unpublished MSS. in his possession. He has never deigned to reply to a single letter on this subject, and does not seem to trouble himself about "the contempt of all honorable men."

E.

To the Editor of The Nation:

Sir: Apropos of the communication of "A Wretched Contributor," in No. 1248 of the *Nation*, I would like to state that I contributed to the *Manhattan* a negro character-sketch, which was published in the final issue of that magazine, but for which I never received one cent in payment, nor was it ever possible to obtain a word in reply to any letter I wrote.

Very respectfully,

Another Wretched Contributor.

Mobile, Ala., June 3, 1889.

"TRY *AND*" ONCE MORE.

To the Editor of The Nation:

Sir: Though my form of expression perhaps warrants Prof. R. L. Preston's objection, I think he will see that, to me at least, his example is only an apparent exception to the principle.

When I say that "with past tenses, *and* cannot take the place of *to*," I speak of tense-*forms* and not of tense-*phrases*. If "try *and* do" is thrown into past-tense *forms*, when *try* becomes *tried*, either *do* must become *did* or *and* must become *to*, with the differences of value I have set forth. *And*=*to* occurs only between root-forms.

In "Nor did Dobbin try *and* convince," "try," "convince," being infinitives, keep the root-form. It is true the complex is past, and it is perhaps adequate explanation to say that this is only an unconscious extension of a fixed formula; but, speaking more philosophically, "did try *and* convince" is a survival from a time when "did" was felt, not as a mere auxiliary, but as a distinct and separate act—a means towards an end—and "try," "convince," are thus "equally contingent" as regards "did," to which they are as truly future as they are to the leading verb in "he proceeded to try *and* convince."

Caskie Harrison.

The Brooklyn Latin School, June 7, 1889.

WAS WASHINGTON "AN EDUCATED MAN"?

To the Editor of The Nation:

Sir: In the review of Justice Landon's 'Constitutional History and Government of the United States,' in last week's *Nation*, exception is taken to the author's statement that Washington was "not an educated man." The reviewer assumes that the statement is not only untrue, but ridiculously so. Justice Landon is nevertheless right and the reviewer wrong, if we accept the testimony of Jefferson, Marshall, Adams (J.), and Bancroft.

Jefferson ('Works,' vol. vi, 287) says: "His education was merely reading, writing, and common arithmetic, to which he added surveying at a later date. His time was employed in action chiefly, reading little, and that only in agriculture and English history." Chief-Justice Marshall ('Life of Washington,' page 1) says his education "was confined to acquisitions strictly useful, not even extending to foreign languages." Bancroft ('History of the U. S.,' vol. vii, p. 394) says: "He grew up without learning. Of arithmetic and geometry he acquired just knowledge enough to be able to practise measuring land, but his instruction at school taught him not so much as the orthography or rules of grammar of his own tongue." See also 'Works of John Adams,' vol. ix, p. 639.

Justice Landon's characterization of Washington, from which this one clause is selected for animadversion, is a fair example of much of his work. Permit me to give it:

"He [Washington] was a lucid writer, though not a debater, not an educated man, scarcely a general reader, not quick in perception; but in solidity of judgment, fairness of mind, dignity of character, and firmness of purpose, he was the ideal American. Take him all in all, alike what he was and was not, what he did and forebore to do, he is the greatest man in all our history."

The condensation is remarkable. Short as the whole is, I venture to think that careful criticism will discover it to be a very complete and just estimate of Washington.

Maurice Perkins.

Union College, Schenectady, N. Y., June 3, 1889.

Notes.

We are glad to learn from the *Academy* that the Cambridge University Press has now nearly ready for publication 'The Collected Papers of Henry Bradshaw,' the late University librarian, and a wonderful scholar. The book will be eagerly looked for, not only by those who knew the author of it, but by hundreds who only came to know about him after his lamented death.

The 'Reliques Scientifiques' of the late Prof. Arsène Darmesteter, of the Sorbonne, will be collected and arranged by his brother, Prof.

James Darmesteter of the Collège de France, and published by subscription in a limited edition by M. Charles Delagrave of Paris. These relics of a literary life too soon cut short will be arranged under three heads, namely, Jewish Studies, Franco-Jewish Studies, and French Studies. They are sure to contain very much which will be of the greatest interest to all students of the Hebrew language and literature, as well as of the French, and also to students of history and of language in general.

Other works of M. Arsène Darmesteter were left nearly ready for the press. Among them we note especially the French Dictionary upon which he spent many years of work, in collaboration with M. Adolph Hatzfeld. This will be published soon, we may hope. The 'Reliques' will make two volumes of about 700 pages in all, and will be accompanied by a portrait and a memoir.

Harper & Bros. will shortly issue 'Between the Lines, a Story of the War,' by Capt. Charles King, U. S. A.; and 'Uncle Peter's Trust,' a story for young people, by George B. Perry.

D. C. Heath & Co. will publish in September 'A German Reader for Beginners in School or College,' by Edward S. Joynes, editor of the 'Joynes-Meissner German Grammar.'

A third volume of the 'Remarks and Collections of Thomas Hearne,' edited by C. E. Doble, has just been issued from the Clarendon Press on behalf of the Oxford Historical Society—the diary having the greatest interest for graduates of that university, though its general literary curiosity and importance are far from inconsiderable. The present instalment is embraced by the two dates May 25, 1710, and December 14, 1712. Like its predecessors, it is separately indexed. There are three references to the late Samuel Pepys, all in his bookish capacity, as, for example, the entry of April 9, 1712: "He [Mr. Urry] hath got a Chaucer MS. from Mr. Pepys in which are some Fragments not printed. He hath another MSSt. (which was borrow'd for him)," etc. There is a single mention of Milton: "Mich. Bolde translated Milton's Paradise Lost into Latin. 'Tis printed. I saw it at Mr. Urry's of Christ-Church, who hath also the first Specimen of it written by Bolde's own Hand.—Dr. Sloane," the entry (for June 9, 1712) continues, "hath an imperfect Copy of William Caxton's Ed. of Chaucer's Canterbury Tales. . . . Caxton's Name does not appear. But, I think, there is no doubt of his being the Printer, the Letter agreeing with the other Pieces I have seen printed by Caxton." The references to Chaucer are numerous, but there is none to Shakspere. There is hardly a page of this volume that does not afford entertaining reading.

Prof. F. G. Selby's edition of Bacon's Essays, published by Macmillan & Co., has been annotated for the use of Indian students, the author being one of the Faculty of Deccan College, Poona. It follows the last one that appeared in Bacon's lifetime (1625), and has the spelling modernized. The notes, for whose fulness apology is offered, should help make this attractive little volume a valuable adjunct in schools of different grades, for the teaching of rhetoric as well as for the forming of ideals.

From Mr. J. O. Austin, Providence, R. I., we receive a broadside of additions and corrections to that admirable work of his, the 'Genealogical Dictionary of Rhode Island.' It is of a proper size to be inserted in the volume. We hope to speak shortly of his no less admirable sequel to the Dictionary, viz., 'Ancestry of Thirty-three Rhode-Islanders.' As examples, in both conception and execution, these publications outrank any of recent years.

We lately made mention of the forthcoming German Dictionary on the pattern of Webster announced by S. Hirzel, Leipzig (New York: B. Westermann & Co.). The first half-volume is now before us (*A-Ehe*), bearing the name of Moriz Heyne as editor. It fills 656 columns, of which there are two to a page (large octavo). The typography is well devised and clear, and the examples of literary usage cited are printed in the Roman character, thus affording a very agreeable rest to the eye in the search for definitions in the ordinary character. These quotations are a marked feature of the new 'Deutsches Wörterbuch,' and their source is precisely indicated. The etymologies, contrary to the American and English practice, do not precede but follow the main definition, and the eye misses the parentheses by which, with us, they are cut off from the rest of the article. Space is economized by omitting compounds *ad libitum*—as, for example, under *Anklage*, we find only *Anklagestand*, against this word and four others given in Thieme-Preusser; and also by making sub-titles of leading words—as (to take the same instance), the paragraph beginning with *Anklage* contains *anklagen*, *Angeklagte*, *Ankläger*, *Anklagestand*, *anklammern*, *Anklang*. That is to say, all the forms *Ankla-* are grouped together; but in the next paragraph the *Ankle-*, *Ankli-*, *Anklo-*, and *Ankn-* are united, so that the practice seems somewhat arbitrary. The total number of words must be very much reduced, but in a manner which will not be objectionable to the Germans, for whom the Dictionary is intended, though foreigners will profit by it as well.

The 'Panorama of the Hudson,' published by the Bryant Literary Union of New York, is a remarkable attempt to show a continuous view of both shores of the river from New York to Albany, with the aid of photography and a mechanical process of engraving. The result is so great a success as to sound the knell of the ordinary panorama sold on the Hudson River boats. One plate is made to answer for both sides of the river, by giving the upper half to the west, and the lower (reversed like a reflection in the water) to the east, so that the album is by no means bulky. A white-letter inscription denotes the several places and points of interest on the way. The historical value of this Panorama will grow with time and the increase of settlements along the river.

Another historical souvenir is the May issue of *Sun and Shade* (Photogravure Co.), which records the scenes and incidents, by land and river, of the late Centennial celebration, with a particularly large group of portraits of the Governors of States, managers, etc., associated with the occasion, and a full selection from the trades tableaux. Mr. A. Wittemann also sends us an enlarged edition of his 'Instantaneous Scenes in the Centennial,' of which we have already spoken.

J. W. Bouton sends us three records of the current Paris Salon—one the regular octavo memorandum 'Catalogue Illustré,' with its cheap process cuts; a second the 'Salon de 1879,' first of twelve parts in quarto shape, with fine photogravures, and a text which opens with some curious details about the Salon of 1789, famous for David's exhibition of his "Brutus"; and the third, Albert Wolff's 'Figaro-Salon,' folio, in which the plates are photolithographic (typogravure), and the parts issued in May and June are to be five. One may take his choice from this series, and easily get an idea of the physiognomy of the exhibition.

Mr. Archibald Grove is to edit for Messrs. Longmans, Green & Co. the *New Review*, beginning on June 1. Lord Randolph Churchill, Senator Naquet ("boulangiste"), and Henry James are among the writers for the first number, which is full of burning questions.

The second and last part of the Scientific Results of Dr. Wilhelm Junker's Travels in Equatorial Africa in 1880-85, containing the barometrical and meteorological observations, is published as a supplement to *Petermann's Mitteilungen*. It closes with an interesting account, by Dr. Bruno Hassenstein, of the methods of construction of his accompanying map, the two northern sections of which are given in this number. This veteran cartographer says that since the time of Barth no traveller has sent to the Perthes establishment geographical material so carefully prepared and so complete as Dr. Junker's. When on the march, he wears a coat of his own designing, with numerous pockets for his note-books, his watch and compass. From a button hang pencils of different colors—red for his route line, blue for the streams, and black for noting the time, direction of his course, and incidents. Throughout a journey of nearly four thousand miles he travelled entirely on foot, thus making his notes both more exact and more legible. On starting in the morning he would enter in a book, ruled especially for the purpose, the exact time of departure; and thereafter, at the end of every five minutes of actual marching, the direction by the compass in which he was going. He would also indicate by various signs the breadth and depth of streams and the direction of their currents, the character of the country, the apparent distance and height of any prominent object, the names of places, tribes, etc., as well as the readings of the aneroid and thermometer. At night these notes were carefully copied with pen and ink into a larger book; one page generally, sometimes two, being devoted to a day's march. So numerous were these various details that Dr. Hassenstein found it impossible to reproduce them all upon his map, although on a scale of 1:750,000.

The April and May numbers of the *Centralblatt für Bibliothekswesen* contain little of general interest. The regulations for the reading-room of the Halle University library, given in the April number, read strangely to American librarians. In the May number W. Schultze begins what promises to be an interesting series of articles on the important part taken by the early Irish and Scottish monks in the preservation and propagation of mediæval science.

In the *Library* for May, F. Madan describes some curiosities of the Oxford Press, while the practical paper of the number is by Mr. Wright, the Plymouth librarian, telling how the board schools of that town were made to act as branches of the public library.

The Boston Public Library now puts forth its completed 'Index of Articles upon American Local History' in its historical collections, by A. P. C. Griffin. This very valuable work has been in progress for six years, and, as its title speaks for itself, we need only give one example, omitting the references:—Jamaica, L. I.: Annals, armed occupation, British occupations of the Presbyterian church, church matters, copies of town orders and resolutions from 1656 to 1660, history, inscriptions in the parish churchyard, letter from the Governor to the inhabitants; marriages, christenings, and burials; petition for land on Long Island, the Presbyterian church, proceedings against Quakers, rate list.

Garden and Forest for June 5 opens with a searching paper on the present condition of Fairmount Park, Philadelphia, as an illustration of the need of study of the ground by a competent landscape gardener before parks are laid out, and of the disaster that comes

from letting politics enter into the management afterwards.

The twenty-first annual meeting of the American Philological Association will be held at Lafayette College, Easton, Pa., beginning Tuesday afternoon, July 9, 1889. The address of the President of the Association, Professor Thomas D. Seymour of Yale University, will be delivered on Tuesday evening. Members intending to be present are requested to send their names to Professor W. B. Owen (Easton, Pa.), Chairman of the Local Committee, as soon as possible. Those who propose to read papers are requested to notify the Secretary of the Association, Professor John H. Wright, Harvard University, Cambridge, Mass., not later than Wednesday, June 26.

The establishment at Harvard of three new fellowships of an annual value of $450 each supplies much-needed sinews to the graduate department of that University. Including the Robert Treat Paine Fellowship of Social Science founded last year, there are now twenty fellowships and twenty-eight scholarships at the disposal of the department. The total annual value of these foundations is $16,500. If it were $50,000, it could be judiciously disposed of among candidates of a high order. Appointments to two of the new fellowships—the Henry Lee Memorial of Political Science and the Ozias Goodwin Memorial of Constitutional and International Law—are still to be made for the coming year.

—We have the first official announcement of Clark University, Worcester, Mass. It tells us of the founder, Mr. Jonas G. Clark, and his desire "that the highest possible academic standards be here for ever maintained"; that special opportunities be offered for research, and that the instructors be left time for it. The Board of Trustees embraces many well-known names, and graduates from several New England colleges, whose work the new-comer is designed to supplement rather than duplicate. Dr. G. Stanley Hall has been chosen President. The University will open on October 2 with courses in Mathematics, Physics, Chemistry, Biology, and Psychology, Dr. Hall himself taking the last-named professorship. His colleagues are as follows: Henry H. Donaldson (Yale, 1879), Assistant Professor of Neurology; Edmund Clark Sanford (California, 1883), Instructor in Psychology; Warren P. Lombard (Harvard, 1878), Assistant Professor of Physiology; F. Mall (Michigan, 1883), Adjunct Professor of Anatomy; Albert A. Michelson (U. S. Naval Academy, 1873), Acting Professor of Physics. Students are classed as "independent," candidates for the degree of Ph.D., special students not candidates for a degree, medical students, and preliminary students or undergraduates, which last must have spent at least two years in a college of good standing. Scholarships and fellowships have been provided by Mr. and Mrs. Clark, but more are desired. A central building and a chemical laboratory are already completed. Tuition fees will be $200 per annum.

—The late meeting of the American Library Association was and was not a success. The Association was entertained by citizens of St. Louis with the most lavish hospitality. Every moment outside of the sessions was occupied in sight-seeing or receptions. The post-conference trip, too, was thoroughly enjoyed—the restful glide down the Mississippi, the prowls through the quaint streets of New Orleans, the home run through the picturesque mountainous region of Kentucky and Tennessee, and the stay at those booming cities of the new South, Nashville and Chattanooga, with a short emulation of St. Louis hospitality at Cincinnati. So much for the pleasure; but the work of the Society was not so well done, for which the heat and still more the choice of the place of meeting were the cause. Half of the audience could hear with difficulty when the windows were closed, and could not hear at all when they were opened; and if they were kept closed, the heat made every one drowsy. In such conditions few felt in the mood for discussion. There were, as usual, too many reports and papers, but as there was no fixed programme, no discussion was cut off because the time for the next paper had arrived; the sparsity of talk was due simply to the hebetude of ideas. A more serious evil than the number of papers was their length. To prevent both evils in future, the suggestions have been made that hereafter an entire session be set apart for discussion alone, and that a twenty minutes' limit for papers be adopted and rigidly adhered to, speakers to be stopped in the middle of a sentence, if necessary. If to this be added the selection of a hall in which speakers can be heard, the Association might again have such a satisfactory meeting as it had at the Catskills. This will be assisted by the growing tendency to break up into sections. The State Librarians' Section was added this year to the Publishing Section. Next year a section for educational (*i. e.*, college and school) libraries will be instituted; after that, perhaps either the small town libraries will gain a chance to talk over their own wants and plans by themselves, unawed by the presence of librarians of a more extended experience, or the great libraries will retire to discuss their somewhat technical papers, leaving the more numerous little libraries to be the Association. One expects the great British Association to work in sections, but it is strange and it is interesting to an evolutionary student that even so small a society as this, whose membership has never exceeded two hundred, should be driven to differentiation.

—The first day was devoted to library architecture. The President, referring to his declaration at the Catskills that the architect is the natural enemy of the librarian, emphasized the distinction between use and beauty, and called upon architects to plan first for service and then to beautify, as the only way in which satisfactory work can be done. It might do, he said, for Bartholdi to design the shell of his statue, and then contrive a frame to hold the plates in place; but, as a living woman has other functions than to be beautiful, and her skeleton could not be designed simply to support her skin, so a library's plan should be made to further its vital functions, and not merely to impress or please the public with a fine elevation. He partly excused the general insufficiency of libraries to fulfil their purposes by the difficulty of reconciling use and beauty, but asserted that architects might have done better if they had given more thought to the problem. This called out from Mr. N. S. Patton, Secretary of the Western Association of Architects, an earnest declaration, not merely that the two, use and beauty, can always be reconciled, but that use is indispensable to beauty, and that it is the duty of the architect always to seek it first. The most noteworthy paper was indisputably that of Miss Mary S. Cutler, on the Sunday opening of libraries, a subject never before treated of in the Association. It was accompanied by valuable statistical tables, which report, among others, one town library that is open on Sundays only, that being the only day on which the outlying farmers all come to the centre of the town. In this case the church and the library work in conjunction more apparently than usual. The subject was treated dispassionately; the arguments for and against were given carefully and with impartiality; the conclusion reached was decidedly in favor of the opening in cities. The sentiment of the meeting was overwhelmingly in favor of Sunday opening. This might be connected with the religious opinions of the members (a census of the post-conference excursion showed 13 Unitarians in a party of 26), but the essayist and all but one of her defenders were not Unitarians. The same census, by the way, showed 10 Republicans, 10 Independents, 5 Democrats, and a woman-suffragist, and that 19 of the 26 came from New England, while 4 of the other 7 were born there.

—Another novel subject was treated in Mr. Bardwell's report on scrap-book making, a new occupation which eager librarians have found for their leisure moments. Mr. Bardwell's own library, the Brooklyn, has, we have heard, made great progress and found great use in such a collection; but we doubt whether many libraries can follow in that path unless their budgets are much increased. Among the other papers may be mentioned Mr. Green's exhaustive paper on the industrial work of libraries; Mr. Foster's careful statement of the uses of a subject-catalogue; Mr. Carr's report on charging systems—of great practical value; Mr. Bliss's clear report on classification; Mr. Bowker's on indexing portraits; and a lively talk by Mr. W. J. Gilbert of St. Louis, on the practical possibilities of indexing. There were no startling theories broached this year. But in the discussion of cataloguing rules, the address of President Cutter, and the paper of Mr. Linderfelt on Dziatzko's rules, were both in favor of modes of entry favoring popular ignorance in opposition to the more scholastic and theoretically consistent practice of the British Museum, which has hitherto been generally adopted by the American libraries—in favor, that is, of entry under much-used pseudonyms in place of the real name, under the titles of British noblemen by which they are known, instead of under the family name by which they are not known, and under the best-known instead of under the last name of a married or divorced or remarried woman. The next meeting will be in the White Mountains or on Lake George, under the Presidency of Mr. F. M. Crunden of St. Louis.

—A most curious and interesting relic of Dutch Christianity in Formosa has come to light from the library of the University of Leyden and the press of Messrs. Trübner & Co. of London. It is the Gospel of St. Matthew, translated into Formosan (Sinkang dialect) by the Dutch domine, Daniel Gravius, who labored as missionary in the island from 1647 to 1651. During the flourishing days of the Dutch republic, an extensive missionary work was carried on by ministers and schoolmasters from the Netherlands, during a period of thirty-seven years, with cheering success. Unfortunately, however, the good work was suddenly arrested by the murderous onslaught of the famous Chinese pirate Coxinga. Born of a Chinese father living at Nagasaki, and a Japanese mother, this pirate made himself the scourge of the Eastern seas. After devastating the coast of China during the decline of the Ming dynasty, and having been twice refused by the Japanese Government men, ships, and orders to invade China, he cast his eye on the feeble Dutch colony on Formosa. He slaughtered most of the Hollanders (though from Japanese sources we know that some of the Dutch men, women, and children were living

as prisoners as late as 1711), and the mission thus came to an end. The Rev. William Campbell, an English missionary now of the flourishing Presbyterian mission among the Chinese at Taiwan Fu, suspecting that the version made by Gravius of the New Testament might be in existence, went to Holland, and, after a long search, aided by the learned men, discovered the Gospel of St. Matthew in parallel columns of Dutch and Formosan, with the bilingual preface of the translator. Messrs. Trübner have reprinted this interesting work in a handsome square volume, which may serve as a basis of a new translation for use among the aborigines who dwell apart from the Chinese, still unconquered, in this latest organized province of the Chinese Empire. With the English version at the bottom and the Dutch at the side, one need not be a Psalmanazar in order to get some idea of the structure of Formosan, which apparently belongs in the group of "agglutinative" languages in use from Borneo to Kamtchatka.

ROMANES'S MENTAL EVOLUTION IN MAN.

Mental Evolution in Man: Origin of Human Faculty. By George John Romanes, M.A., LL.D., F.R.S. D. Appleton & Co. 1889.

Dr. Romanes's writings are beginning to excite a very special interest among readers of psychological literature.* The volume before us is the third in perhaps the greatest continuous and systematic psychological labor ever proposed. The preceding volumes were entitled 'Animal Intelligence' and 'Mental Evolution in Animals.' The remainder of the series are to treat of 'Mental Evolution in Man.' The present book deals with the "Origin of Human Faculty" by the method of comparative psychology. Future instalments will take up the natural history of Intellect, Emotions, Volition, Morals, and Religion. The author proposes for himself the task of filling up the gap between the human and animal mind, and to trace the stages of mental development from the lowest life up to the highest. He is eminently a scientific and constructive psychologist.

The fundamental position is thus stated:

"In the present treatise I take as granted the general theory of evolution, so far as it is now accepted by the vast majority of naturalists. That is to say, I assume the doctrine of descent as regards the whole of organic nature, morphological and psychological, with the one exception of man. Moreover, I assume this doctrine, even in the case of man, so far as his bodily organization is concerned; it being thus only with reference to the human mind that the exception to which I have alluded is made. And I make this exception in deference to the opinion of that small minority of evolutionists who still maintain that, notwithstanding their acceptance of the theory of descent as regards the corporeal constitution of man, they are able to adduce cogent evidence to prove that the theory fails to account for his mental constitution" (p. 390).

He proceeds under the assumption of the general validity of the argument made in his previous work, 'Mental Evolution in Animals,' and carries into human psychology the principles he applied in explaining the animal:

"I desire to show that in the one province, as in the other, the light which has been shed by the doctrine of evolution is of a magnitude which we are now only beginning to appreciate; and that by adopting the theory of continued development from the one order of mind to the other, we are able scientifically to explain the whole mental constitution of man, even in those parts of it which, to former generations, have appeared inexplicable" (p. 1).

Man's living nature is identical in kind with the nature of all other life, and "the human mind itself is but the topmost inflorescence of one mighty growth whose roots and stem and many branches are sunk in the abyss of planetary time." This is the new point of view contributed to philosophy by the young science of biology.

The thesis propounded is established as follows: It is improbable on *à priori* grounds that the process which has been "elsewhere so uniform and ubiquitous should have been interrupted at its terminal phase." Again, the human mind, within its own career of development, "begins at a zero level of mental life and may culminate in genius," but never experiences any sudden leaps of progress. Then, too, in its own lower phases, the human mind passes through the very stages which the lower forms of consciousness pass through—a phenomenon which is not a chance coincidence. Lastly, "in the history of the race—as recorded in documents, traditions, antiquarian remains, and flint implements—the intelligence of the race has been subject to a steady progress of gradual development." Evolution, therefore, acted from the beginning up through the anthropoid apes, and, if it there broke off, it began again with the primitive man and has been uninterrupted since. To admit any such break in the principle of nature is to violate the law of *continuity*, the grandest which science has developed.

To appeal to special characteristics—Romanes holds that if the Emotions of the animals be compared with those of man, they will be found in great measure coincident. He believes that in his 'Mental Evolution of Animals' he has given "unquestionable evidence" that they possess all the human emotions, except those of the moral sense, religion, and the sublime. This parallelism (especially as applied to the childhood of man) strongly implies genetic continuity. Again, the Instincts having reference to nutrition, self-preservation, reproduction, and the rearing of progeny, are the same and act the same in man as in the creatures below him. In Volition, the human surpasses the brute in complexity, refinement, and foresight, but not in kind. And so finally in Intellect, though there is enormous difference, it is not one of kind, but simply one of degree. Up to a certain point, the correspondence is complete. In a tabular frontispiece to the book, Dr. Romanes has exhibited the parallelism of psycho-genesis in man and animals, indicating in a suggestive way the points in the scale in which new tendencies and faculties first appear.

The only distinction which he thinks can be properly drawn between human and brute psychology is that man has the power of abstraction, the ability of making "general ideas." On this he quotes Locke with essential agreement. By "general idea" he means, with other psychologists, the idea which comprises the resemblances between, for example, the various individual men, without regard to their individual differences. The idea of any special man is a percept; that of the class Men, a concept. He borrows a simple illustration from Galton: the difference is like that between the photograph of a particular person and the composite photograph of a large number. As the latter exhibits the characteristics common to all, so "the sensitive tablet of memory" fuses into a single conception the many single images obtained by many sense-perceptions. Again, as, in the case of the composite photograph, only those objects which present numerous points of resemblance can be blended into a distinct picture, so, in the case of thought, only those images which are distinctly similar will blend in single conception or class-representation.

Our author believes a more careful classification of the kinds of ideas to be necessary. Without this, neither the difference between the animal and human mind nor the development of the latter will be understood. The word "idea" is "a generic term to signify indifferently any product of imagination, from the mere memory of a sensuous impression up to the result of the most abstruse generalization." He points out three distinct types: Memories of Sensuous Perceptions, Recepts or Generic Ideas, and Concepts or General Ideas. These include, in natural order of development, all the various sorts which writers have pointed out. The term "Recept" is one that Romanes invents to designate a class of ideas which he believes not to have been clearly distinguished. In his chapter on the "Logic of Recepts" the difference between recepts and concepts is more clearly shown. The one is received, the other conceived. The one is a passive generalization, the other an active, intended one. The one is made with little or no consciousness of the mental phenomenon, the other only when the effort is definite in consciousness. In one the idea carries with it, or consists of, an image; in the other there is never an image. He quotes passages from Taine, Sully, Perez, Mill, Mansel, Noiré, and Huxley to show that this is a distinction recognized, though its significance is not understood.

Now, it is this higher kind of ideation, the formation of concepts, which in Dr. Romanes's opinion makes the essential distinction between the human and the brute mind. The important question is, whether between Recept and Concept there is a difference in kind or only a difference in degree. On the settlement of this depends the settlement of the origin of man's mental powers. If there is a difference in kind, then some other origin than an animal ancestry must be sought for the human mind. If the difference is shown to be only one of degree, then in man's mental relations he is no less kin to the lower kingdoms than in his physical.

The formation of ideas among animals is carefully examined and illustrated in a comparison with those of the simplest human ideation exhibited by the child and the savage. Romanes cites the case of the chimpanzee in the Zoölogical Gardens whom the keeper and he himself have educated to designate correctly groups of objects up to five. Then there is the notion of causation indicated by so many creatures, as, *e. g.*, cats learning to ring and knock for admission, and the numerous imitative acts of monkeys. (See his 'Animal Intelligence,' which is a storehouse full of such instances.) Such acts show that not only all men, but most animals likewise, have a "generic idea of causality, in the sense of expecting uniform experience under uniform conditions." All this, however, is within the limits of what Romanes has designated as the sphere of Recepts. He would not insist that the division, though clear, is sharply defined; for not only are remembered Percepts observed to blend gradually into rudimentary Recepts, but the highest and most complex Recepts in turn become the simplest Concepts.

* His home is now in London, though he was born at Kingston, in Canada (1848). His education has been extensive. The earlier stages were conducted by tutors and in private schools in London, France, Germany, and Italy. The collegiate part was furnished by Cambridge University, from one of whose colleges he graduated in 1870, taking honors in Natural Science. While still in college he became an intimate friend of Charles Darwin. From the first he has been an ardent evolutionist, and has written much on subjects in natural history and biology. The work entitled 'A Candid Examination of Theism, by Physicus' is likewise attributed to him. Within a few years his energies have been largely directed to questions connected with psychology.

In the sphere of Concepts the images of Percepts and Recepts are left behind. This dry and difficult subject is treated with unusual freshness. It is clear that it has been thought out and its difficulties perceived. A Concept has no remembered thing as its basis. Such ideas as color, labor, etc., are abstractions, only possible through language. A word in such cases is taken as a mental equivalent of such ideas as previously rested on images, actual or remembered. Generic ideation has "stored the mind with a rich accumulation of orderly ideas, grouped together in many systems of logical coherency" before language appears. Language takes up this work of grouping. It names the Generic Ideas (or Recepts) and thus builds the "Lower Concepts." These are general as contrasted with generic. On this basis the "Higher Concepts" are developed. Each higher, all the way, is born out of the lower. From the start the essence of the idea has been to classify; but in the Receptual order it is automatic, in the Conceptual order it is introspective.

The syntax of Gesture language is discussed on the basis of the authority of Tylor and Dr. Scott. Nothing specially new is added, but the significance of the whole in a scheme of the development of human faculties is pointed out, viz., that in it the stage of Recepts is reached, but ideas of any high abstraction are never expressed. Animals have the germs of language in tones, gestures, etc. They make these not only from natural impulse, but also through conventional arrangement. (Numerous cases are cited and references made to 'Animal Intelligence.') Again, animals possess to some extent the powers of articulation, the next higher stage in the development of expression. Some of them—in common with infants, savages, and idiots—articulate by way of meaningless imitation. The next stage, spontaneous or instinctive exercise of articulate powers in meaningless sounds, occurs in young children, in uneducated deaf-mutes, and in idiots, but is too high a stage for animals.

The understanding of tones of the human voice extends at least through the entire vertebrata, but that of words and phrases only to the highest species. The best examples are those of dogs and apes. The very remarkable understanding of the chimpanzee in the Zoölogical Gardens of London is again cited (p. 126). This higher excellence of receptual capacity through the hearing of articulate words is a fact of the largest significance. It proves a parallelism in the sharing of certain faculties of mind. This faculty of word-comprehension is on the very border of that of intelligent word-using. The difference, then, between man and these animals in respect to these parallel psychological faculties relates only to their mode of expression. It is an anatomical and not a psychological one, depending solely on a difference in structure of the vocal organs.

The parallelism is made more complete in the case of animals which learn to articulate and to understand what they say. Curious cases are quoted of parrots and starlings calling persons and animals by name, asking for favors, scolding, saying greetings and farewells, etc., with unerring precision. Though these all have their basis in the principle of association, and are very automatic, yet they are of the same sort as the human as far as they go. It is exactly in this manner, by these impulses, and along these lines of association, that children do their first talking.

A point of interest in this comparison is, that while this child and animal talk is so largely imitative and onomatopoetic, there is yet observed "a fertile tendency to the invention of words wholly arbitrary." In some children this has gone so far as the invention of a whole language for themselves. Cases, well corroborated, are cited from Horatio Hale and Dr. Hun. A pair of twins in a Boston suburb developed a language of their own. They refused to utter a syllable of English—not even "papa" or "mamma." They "passed the days, playing and talking together in their own speech, with all the liveliness and volubility of common children." After making many comparisons (drawn from deaf-mutes) between thought as expressed in gesture and as expressed in words, our author comes to the conclusion that, "in the absence of articulation, the human race would not have made much psychological advance upon the anthropoid apes" (p. 151).

The work contains a most interesting chapter on the development of Self-Consciousness. "Self-consciousness consists in paying the same kind of attention to internal or psychical processes as is habitually paid to external or physical processes—a bringing to bear upon subjective phenomena the same powers of perception as are brought to bear upon the objective" (p. 195). Now, it is claimed that animals know something of mental operations, but this comes from their observation of it in other animals; "they recognize a world of ejects as well as objects: mental existence is known to them ejectively, though, as may be allowed, never thought upon subjectively." This "ejective origin of subjective knowledge" is a point of noteworthy importance: it is a sort of "outward self-consciousness," common also to man, which does not penetrate to the contemplation of subjective mental processes. In the young child, this consciousness includes its own body as among the world of objects. Prof. Preyer relates, "that his boy, when more than a year old, bit his own arm just as though it had been a foreign object." Of course this is a stage much below that of Buffon's parrot or many of the adult animals, who distinguish their own organism from other objects and associate this with their own mental states. Even after the child begins to talk, he speaks of himself "by his proper name, or in the third person." The child's rudimentary designation of itself as subject is first shown in the third year. This stage of consciousness corresponds to the preconceptual stage of judgments. But before this it has shown the capacity to make simple receptual judgments on objects about it. This it states in words, just as the animal does in gestures or vocal signs. From this on it outstrips the animal because of its more efficient system of sign-making, its being surrounded socially by the medium of speech, and its strongly inherited propensity to communicate perceptions and desires by signs. Add to these "the expressions of affection, sympathy, praise, blame, etc., on the part of others, and the feelings of emulation, pride, triumph, disappointment, etc., on the part of the self," and we have the principal influences tending to impress upon the growing child the sense of personality. Like the development of the embryo before birth, the process is gradual, is a growth. Finally, it undergoes a leap of progress analogous to that of the birth of the body. "Midway between the gradual evolution of receptual ideation and the no less gradual evolution of conceptual, there appears to be a critical moment when the soul first becomes detached from the nutrient body of its parent perceptions, and wakes up in the new world of a consciously individual existence."

In the latter half of the book much space is devoted to the evidence which language has to contribute to the theory of the gradual development of mental faculty. Here, in the etymology of words and in the buried relationships of languages, is an "unintentional record of the prehistoric progress of ideation." Comparative philology has conclusively shown that language did not appear ready-made, but is the result of gradual evolution. After discussing the types, explaining the methods and principles of classification, exhibiting the process of evolution, etc., the conclusion is reached that languages become simpler in structure, poorer in ideas, more physical in conceptions, *i. e.*, they exhibit a more and more receptual ideation the further they are traced back in their history, until finally their "roots" only are left by the analysis. Here the genealogy becomes further impossible. Help must be looked for from other quarters. Growth during the period in which they can be traced is presumption that growth preceded the point at which investigation is impeded, until finally a time is reached when there was no language.

The conclusion is, that psychically, "the whole distinction between man and brute resides in the presence or absence of self-consciousness." Dr. Romanes has all the way been concerned with "the question whether we have here to do with a distinction of kind or of degree—of origin or of development" (p. 430). He believes himself to have abundantly proved the latter. "If we already accept the theory of evolution as applicable throughout the length and breadth of the realm organic, it appears to me that we have positively *better* reasons for accepting it as applicable to the length and breadth of the realm mental" (p. 437).

It must be remarked that Romanes seems to us to lay too much stress on the difference between the self-consciousness of man and that of the animals. Some animals have the power of forming and communicating ideas; *i. e.*, they use "intentional signs." It may be much of a question how they can intentionally convey their ideas if they are not aware of them to some extent as the ideas which they have. Some degree of real self-consciousness is difficult to withhold from them.

The author would have served his readers better, had he given more attention to an analysis of the book. The titles of the seventeen chapters are brief and blind; the reader has no knowledge of what is coming. This is the more important because the book is too long (452 pages) for its matter. The style is redundant and prolix. Any who will read and appreciate it, would understand it just as well and appreciate it much better, had the writer practised the grace of brevity. In an age of so many claims, men who would be gladly read should learn to write short. It would appear as though this tendency had its roots in a certain polemic attitude which runs through the work. Dr. Romanes assumes himself to be writing against some one. No doubt he is; but the interest of truth (which is the highest aim) would be better served were there less of this belligerent animus. The coolest and most discriminative judgment is not a natural outgrowth of such polemic emotion. Besides, this occasions a certain unpleasant conspicuousness of personality relating to what he "will proceed" to do, whether his "opponents will find it easy to meet" him, and what he "fearlessly invites them to do," etc. Though we heartily dissent from this fighting posture in which the argument is all the way conducted, yet it must be admitted that he has given his "opponents" a great task. It is not probable that the case as presented by Dr. Romanes will be accepted as established, but to him is due the credit of

making the best explanation thus far from the side of natural development.

The age-long riddle regarding "general ideas," which has so puzzled Vedanists, Platonists, Scholastics, and German Idealists, receives here the most masterly and lucid explanation yet given. Some new terms have been invented to express most careful distinctions. Though at first, perhaps, a little confusing, they are indispensable, and will probably retain a place in psychological terminology. No student of psychology can afford to dispense with this rich, learned, elaborate, and latest contribution to his subject. And not only will those interested in problems of psychology find here substantial help, but students of biology, philology, and anthropology will be repaid for the time they spend with this book. Dr. Romanes is doing an indispensable work. The succeeding parts of his undertaking will be awaited with unusual interest.

BONVALOT'S HEART OF ASIA.

Through the Heart of Asia: Over the Pamîr to India. By Gabriel Bonvalot. A. C. Armstrong & Son. 2 vols., pp. 281, 249.

In the autumn of 1880, M. Gabriel Bonvalot and his friend Capus, moved partly by a desire to collect specimens of natural history, and much more, we imagine, by a love of adventure, undertook a journey in Central Asia, which lasted until February, 1882. Going through Siberia as far as Omsk, and thence to Vierny, they went straight on to Tashkent. They made a tour in Khokand, visited Samarcand and the upper valley of the Zaraf Shan, and from Karshi made a trip to Kilif and Shirabad on the Oxus. The return journey went through Bokhara, Khiva, and across the Ust-Urt to Krasnovodsk on the Caspian. The account of this journey, which was published in two volumes in 1884–'5 under the title of 'En Asie Centrale,' is light, pleasant reading, but very superficial—chiefly the story of the travellers' adventures, the most possible being made out of very trivial incidents. One catches glimpses of native life and civilization, and one gleans some facts relating to the course of trade with India, Russia, and other countries. But we look in vain for what we expected to find—interesting details about the natural history of the country. Nothing whatever, or almost nothing, is said about the effects of Russian rule, or about politics.

The same faults might be found with the volumes before us, except with the preface, to which we will recur. The journey here described is more interesting than the preceding one, because it takes the reader over new ground, and because the adventures are worth telling. Bonvalot and Capus, accompanied by an artist friend, Albert Pépin, who has contributed 250 illustrations to the book, left Marseilles in February, 1886 (curiously enough, the author, although very particular about months and days, does not mention the year), and speedily arrived, by way of Constantinople, at Tiflis. From one of the stations on the railway to Baku they rode to Teheran, suffering many detentions from bad weather, swollen rivers, and inundated roads. Thence they went to Meshed, and then, by Sarakhs, to Merv, where they saw the building of the Russian town and the entry of the first railway train. Here they stayed for a month, hoping to penetrate into Afghanistan by the Kushk valley, until they found that a Russian scientific expedition had been turned back; then, planning to go by Andkhoi—a scheme which also fell through—and finally visiting General Komaroff at Askabad. As the railway was finished no further, it was necessary to cross that desert, once so deadly, on camels and horses to Tchardjui, where they struck their old road to Bokhara and Samarcand. After resting and refitting, the travellers went to the Oxus by the way of Karatag, Hissar, and Kabadian, and crossed the river with the intention of going to Balkh, and then making their way to India as best they could. They were, however, detained in honorable captivity by the Afghans at Shur-Tepé until instructions could be had from Cabul, and were then sent back across the Oxus, after being told that if they crossed it again without proper permission, it would be at the risk of their lives. To their surprise, the Afghan Mirza who had charge of them spoke excellent and fluent Russian.

It was already December when they got back to Samarcand, and, as usual in such cases, the checks which they had met with only heightened their ardor for going on. General Korolkóff suggested to them to try and reach India by Kashgar, or even by the Pamir, which no one had ever attempted to explore in winter. They had already thought of this, and therefore made all their preparations and went to Ush, at the extreme east of the province of Khokand, still undecided which route to take. After all the information to be obtained on the spot, they decided to try the Taldyk pass, the plateau of the Alai, and the Pamir. The season was late, and more snow than usual had fallen; but, in spite of dangers from famine, cold, deep snow, and avalanches, and of plots laid for them by Kara-Kirghiz, Chinese, and Afghans, they reached Sarhad on May 7, just two months after leaving Ush. Here they were again detained by the Afghans; but, as soon as their horses had recovered their strength, they started off without waiting for permission, crossed the Hindu-Kush mountains without a guide, and reached Mastudj in the petty independent country of Tchatral. The usurping Metar of Tchatral, who had committed every possible crime, refused to let them go on without an order from the Indian Government, and Capus and Pépin were forced to go to Tchatral to make him a formal visit, in accordance with what was claimed to be invariable custom, while Bonvalot remained behind at Mastudj for forty-five days until letters arrived from the Viceroy. Meanwhile, fears were entertained in Europe that the travellers had been murdered. More fortunate than some others, the Viceroy's orders opened the road for them to Ghilghit and Kashmir, and, after a short stay in Simlah, they got back to France at the end of September, 1887.

It may be as well to say for the benefit of the reader that M. Bonvalot writes in a lively, readable style, that he possesses the endurance, pluck, and patience necessary for an Eastern traveller, and that he does not lay undue stress on his dangers, difficulties, privations, detentions, and annoyances.

In his preface the author calls attention to the manner in which Russia assimilates her conquests by quickly admitting conquered populations—for instance, the Turcomans—to the rights of Russian subjects, and by giving them hopes for the future by employing them in the military and civil service. He recognizes, what all travellers in Central Asia have seen, that the Russians have come there to stay, and that there is no danger of their being turned out by any rising of the native population, even if supported by foreign intrigue and money. With the English it is different. Bonvalot says:

"They have not the same security as those who descend, from the west, the historical slope which leads to the countries governed by them. They have not the same confidence in the future, the same carelessness as to the morrow. The English endeavor to put back the hour for playing the game of which they will have to provide the stakes. They cannot afford to make a single false move, and those who are at the helm keep their eyes and ears open; the least thing startles them. They display admirable tenacity, intelligence, and activity. I would compare them, without wishing to speak disrespectfully, to the Chinese conjurer who keeps twenty plates twirling in the air at the same time. . . . Nevertheless, their power, whatever they may say, is more or less artificial; they are making their way up stream, which tires the boldest swimmer, whereas the others are following the current, which is far easier."

While detained at Tchatral the travellers had plenty of time to cross-question the natives. These, ten years ago, only troubled themselves about the English, but are now interested in the Russians, who, from the information brought by the pilgrims, are poor, but have a great many soldiers.

"The Russians are thought to be made of better stuff throughout all Asia, and as their finances do not admit of their indulging in the prodigalities of the Anglo-Indians, the people are more struck by their military power, while with the English it is the depth of their purse which creates so much surprise. The peoples and tribes surrounding India have got to think that they have only to stretch out their hand to those who govern the country, and they are always surprised when they do not receive anything. It is easy to see by the way in which they ask, that they consider themselves entitled to largesses, and they regard the English not as mighty warriors, but as very rich merchants who have built up the edifice of their power upon piles of rupees, than which nothing could be more fragile. They fully recognize the courage of the English; they admire their wonderful public works, their fine railways; and yet they keep their eyes fixed on the Russians, and expect something good out of them. It is difficult to win the gratitude of Asiatics, and to satisfy them; and even those of India are not satisfied. I don't know what they expect to get out of a change, and they are perhaps as childish in this respect as certain other nations. But all I know is that many a discontented Hindu says: 'When the Russians are here, things will be different.' When will they be in India, or will they ever be? I am not competent to answer these questions, not knowing what the future has in store; but I do know that their coming is eagerly awaited by not a few, and that a great many expect to see them arrive."

An explanation of this state of unrest may perhaps be found partly in the vagaries of Eastern imagination, and partly in the fact that Orientals are accustomed to a régime of individual liberty, with freedom to practise all the rites required by their religion, and to keep to the old customs and habits of their several races—a régime tempered by occasional acts of despotism and severity. This sort of government the Russians know well how to provide, and they are at the same time comparatively free from any prejudices of race, caste, or color. The English, on the other hand, besides their race prejudices and their want of sympathy with the natives, have a stronger feeling of their moral duty as a government, and try to bring their subject peoples under the strict rule of law and legality—a process which causes discontent.

The Primitive Family in its Origin and Development. By C. N. Starcke, Ph.D., of the University of Copenhagen. [International Scientific Series.] D. Appleton & Co. 1889.

Dr. Starcke has evidently studied very carefully modern authors and authorities on the subject of his work, but he is deficient in the knowledge of older sources, which possess the great value of containing the statements of eye-witnesses concerning a state of things that

has been greatly modified since, and in many instances has almost disappeared. Their explanation of it may be utterly false, but we ought to know and critically examine what they report as having seen or learned at first hand. Our author is quite deficient on this point, for reasons not discoverable by us. But it is certain that he has overlooked the numerous evidences of descent in the female line among the Caribs, the positive traces of its former existence among the Nahuatl of Central Mexico, the Peruvian *ayllu* or clan, so distinctly found among the Incas of Peru. Mere omission to mention them is very pardonable; but the assertion, in the case of the Mexicans, that such traces "do not exist," is less to be excused.

Our author appears to be rather confused in regard to the true nature of the clan. This is not surprising if we take into consideration that he evidently has not had opportunity of witnessing the working of the institution *in situ*. He furnishes, in this respect, another evidence of the fact, which grows more and more patent, that ethnology is dangerous ground to tread for any one who has not lived with at least one primitive people for some length of time. It is interesting to notice that Dr. Starcke feels, without knowing it, that the religious organization of primitive nations is apt to give a misleading appearance to their sociology. The clan is independent of and anterior to it, as an institution, yet the two coexist without clashing. As long as that organization is not fully studied and explained, there will always be a number of hypothetical explanations offered for many features which, in fact, are of the greatest simplicity in themselves, and quite easily understood by him who is practically acquainted with the matter through long experience. In the old controversy between Morgan and McLennan, Dr. Starcke endeavors to be fair, at least. Here again his lack of personal acquaintance with Indians, for instance, prevents him from seeing things in their natural light. The controversy is not advanced a step by all that he says about it.

Otherwise, the book, as a specimen of honest "learning" alone, deserves commendation; but the time for theorizing in the field of ethnology is rapidly passing away, even in such portions as are most obscure, like the Primitive Family question. There is enough opportunity left for truly scientific study of the matter. Instead of elaborate compendiums from a theoretical standpoint, the friends of ethnology had better imitate the example of Morgan, and go and see for themselves before writing about it.

Shakespeare. Par James Darmesteter. Paris: H. Lecène & H. Oudin. 1889.

It would doubtless be too much to say that a serious Frenchman is the only tolerable "serious" person on the face of the earth, but it is hardly too much to say that he is an admirable person, and valuable in France in proportion to his rarity. One of the best Frenchmen of this type, Prof. Darmesteter of the Collège de France (who, unhappily, needs no longer to be distinguished by his given name), has undertaken to introduce Shakspere to his countrymen in a new volume of the "Collection des Classiques populaires." It seems to us that M. Darmesteter has done his work extremely well. He gives a brief outline of Shakspere's life, and then, passing almost dry-footed over the poems, takes up the plays. These he treats simply, avoiding all minute criticism, translating passages and scenes, and connecting them by the story of the drama, told cleverly and very briefly. It is probably true that these are the very best translations of Shakspere into the French that ever have been made. They are for the most part graceful and accurate, and sometimes they succeed in showing in their new dress not only Shakspere's meaning, but also something of his style. We have no space for quotations, but the scene between *Lorenzo* and *Jessica*, on page 113, will show what we mean. It is not perfect, for here and there a word grates a little on the ear, or a cadence lacks its dying fall; but none the less there is something of Shakspere in it that we have not found elsewhere.

It takes little from the praise due to M. Darmesteter to say that the reader notes some slips in his work here and there, as where he makes *Mark Antony* say in his speech, "Mais, si j'étais Brutus, un Brutus-Antoine, j'enlèverais vos âmes," etc.; or shows *Cleopatra* with the asp, her "baby at her breast," "tétant sa nourrice endormie"; or even when he mistakes the luces in *Justice Shallow's* coat-of-arms for lilies. Nor does it matter much more to the wise reader if he cannot wholly go along with the author in his opinion of the "pure et chaste jeune fille" *Ophelia*, or if he believes that there was another and more deep-seated reason for *Iago's* hatred of *Othello* than mere jealousy of *Cassio's* advancement. These are but trifles; the main thing is, that a simple and excellent book on Shakspere has been given to French readers by M. Darmesteter.

The print and paper of the volume are good, but not the best. The illustrations are all of them atrocious: those representing the witch-scene in "Macbeth," and *Prospero* and *Miranda* in the "Tempest," especially cry to heaven.

BOOKS OF THE WEEK.

Anderson, Nellie V. The Right Knock: A Story. Chicago: The Author.
Bamford, Mary E. Up and Down the Brooks. Boston: Houghton, Mifflin & Co. 75 cents.
Bland, F. The Prophet's Mantle. Belford, Clarke & Co.
Booth, C. Labor and Life of the People. Vol. I. East London. G. P. Putnam's Sons.
Bowden, T. R. Blunders in Educated Circles Corrected. G. W. Dillingham.
Burnett, Frances Hodgson. Vagabondia: A Love Story. Chas. Scribner's Sons. 50 cents.
Burroughs, J. Indoor Studies. Boston: Houghton, Mifflin & Co. $1.25.
Clarke, W. Political Orations, from Wentworth to Macaulay. London: Walter Scott.
Cobb, S., Jr. The Smuggler of King's Cove. Cassell & Co. 50 cents.
Cook, Clarence. Art and Artists of Our Time. Parts 1—16. Selmar Hess.
Corbett, J. Kophetua the Thirteenth. Macmillan & Co. $1.
Deland, Margaret. John Ward, Preacher. 37th thousand. Boston: Houghton, Mifflin & Co.
Desty, R. Lawyers' Reports Annotated. Book II. All Current Cases of General Value Decided in the United States, State, and Territorial Courts, with Full Annotation. Rochester: The Lawyer's Coöperative Publishing Co.
Eagan, M. F. Lectures on English Literature. W. H. Sadlier.
Emerson, R. W. The Fortune of the Republic, and Other American Addresses. Boston: Houghton, Mifflin & Co. 15 cents.
Fiske, J. The Beginnings of New England; or, the Puritan Theocracy in its Relations to Civil and Religious Liberty. Boston: Houghton, Mifflin & Co. $2.
Gairdner, J. Henry the Seventh. Macmillan & Co. 60 cents.
Heimburg, W. Two Daughters of One Race. Illustrated. Worthington Co.
Heyne, Prof. M. Deutsches Wörterbuch. A—Ehe. B. Westermann & Co.
Johnson, W. E. Treatise on Trigonometry. Macmillan & Co. $2.25.
Justi, Prof. C. Diego Velazquez and his Times. Translated by Prof. A. H. Keane. Philadelphia: J. B. Lippincott Co. $10.
Kellog, Prof. M. M. Tullii Ciceronis Brutus de Claris Oratoribus. Boston: Ginn & Co. $1.35.
Kerr, A. M. Trean; or, The Mormon's Daughter. Belford, Clarke & Co.
King, Capt. C. "Laramie"; or, The Queen of Bedlam. A Story of the Sioux War of 1876. Philadelphia: J. B. Lippincott Co. $1.
Lang, A. Theocritus, Bion and Moschus. Rendered into English Prose, with an Introductory Essay. Macmillan & Co. $1.25.
Larminie, W. Glanlua, and Other Poems. London: Kegan Paul, Trench & Co.
Lee, Margaret. Lizzie Adriance. George Munro. 25 cents.
Lyall, Edna. Derrick Vaughn, Novelist. Frank F. Lovell & Co.
MacCoun, T. An Historical Geography of the United States. The Author. $1.
Mercer, Rev. A. G. Christ and his Teachings. Sermons. A. D. F. Randolph & Co. $1.50.
Merriam, Florence A. Birds through an Opera-Glass. Boston: Houghton, Mifflin & Co. 75 cents.
Miss Kate; or, Confessions of a Caretaker. By "Rita." Frank F. Lovell & Co. 30 cents.
National Academy of Sciences. Vol. IV. First Memoir. The Cave Fauna of North America, with Remarks on the Anatomy of the Brain and Origin of the Blind Species. Smithsonian Institution.
Near to Happiness. Translated from the French by Frank H. Potter. D. Appleton & Co.
North, B. The Diamond Button; Whose Was It? Cassell & Co. 50 cents.
Ohnet, G. Antoinette: the Marlpit Mystery. Philadelphia: J. B. Lippincott Co. 50 cents.
Panorama of the Hudson. New York: Bryant Literary Union.
Pendleton, L. In the Wire-Grass: A Novel. D. Appleton & Co.
Pitman—Howard. The Reporter's Companion. Cincinnati: The Phonographic Institute.
Putnam, Prof. D. Elementary Psychology, or, First Principles of Mental and Moral Science, for Schools. A. S. Barnes & Co. 90 cents.
Regel—Schuler. Einführung in das heutige Englisch nach Stämmen geordnet, mit Berücksichtigung der Synonymik. Leipzig: B. G. Teubner.
Robinson, W. The English Flower Garden. Style, Position, and Arrangement. Forming Vol. I. of the Garden Cyclopædia. Illustrated. 2d ed. London: John Murray.
Rosen, L. Grisette: A Tale of Paris and New York. John Delay. 50 cents.
Rydberg, Dr. V. Teutonic Mythology, Translated from the Swedish by Rasmus B. Anderson. London: Swan Sonnenschein & Co.
Selby, F. G. Bacon's Essays. With Introduction and Notes. Macmillan & Co. 90 cents.
Shuey, Lillian Hinman. California Sunshine. Oakland, Cal.: *Pacific Press* Publishing Co.
Sidgwick, Mrs. Alfred. Caroline Schlegel and her Friends. Scribner & Welford. $2.
Simonds, W. E. Sir Thomas Wyatt and his Poems. Boston: D. C. Heath & Co. 95 cents.
Super, Prof. O. B. Le Mari de Madame de Solange. Par Emile Souvestre. With English Notes. Boston: D. C. Heath & Co.
Snyder, W. L. The Geography of Marriage; or, Legal Perplexities of Wedlock in the United States. G. P. Putnam's Sons. $1.50.
Zarilla: A Novel. G. W. Dillingham. 50 cents.

Our Native Ferns

AND THEIR ALLIES. By Lucien M. Underwood, Professor in Syracuse University. *Third edition, revised.* 12mo, 156 pp. $1.25.

"The addition of the remaining vascular cryptogams greatly increases the value of the book, and makes it doubly useful to all who seek to study this class of plants."—*Bulletin of the Torrey Botanical Club.*

Entomology for Beginners.

By A. S. Packard, M.D., Ph.D. 12mo, $1.75.

"It is the best thing of the kind in the English, or any other language. There is no work that I would recommend to the young student so heartily."—*S. W. Williston, Professor in Yale University.*

HENRY HOLT & Co., New York.

WANTED.

$100,000

In sums of $500 and upward, to loan on improved Denver real estate, at

8 PER CENT.

PRINCIPAL AND INTEREST GUARANTEED.

Denver real estate nets an average of 25 PER CENT. per annum. Maps and information free.

The Nation.

NEW YORK, THURSDAY, JUNE 20, 1889.

The Week.

THE English newspapers are generally agreed that America has come off with flying colors at the Samoan Conference, and has for the first time taken rank as a first-class Power in diplomacy. The victory, if it is to be considered such, has been gained in spite of the teachings of Washington, and in contravention of our unbroken foreign policy of a hundred years. Therefore it can be justified only by the event. It is our belief that meddling in Samoan affairs, as it has cost more in the past than it has yielded, so it will cost a great deal more in the future, because, in the first place, there is nothing in Samoa worth going for, even if it were conveniently situated, and because, in the second place, it is at too great a distance, being a thousand miles further from San Francisco than Liverpool is from New York. Nor do we think that a diplomatic triumph over Germany under the circumstances is a thing to be proud of. Nevertheless, the Samoan complication was an old-time legacy, dating from 1872. It had fallen to the heirs and assigns of Gen. Grant's Administration, and it had to be dealt with. The wisest policy for us would have been to renounce under the will; but if national pride would not admit of this, the next best thing would have been to have the very least, and not the very greatest, share in the responsibility for the government of the islands.

It is small wonder that Canada wishes to rid herself of the title of "Boodlers' Paradise," which the presence within her limits of so many fugitives from justice in other States has fixed upon her. The full number of such residents who have fled thither from the United States, according to an Ottawa despatch in the *Times*, is placed by a secret-service officer at 2,000. They include all kinds of defaulters and thieves, from the indicted boodle Aldermen and "Billy" Moloney, down through all stages of bank officials who have either run away with bank funds, or have fled to escape the penalties of discoveries that they have been spending those funds without permission. The new law surrendering all such criminals, all expenses of arrest and surrender to be borne by the foreign State, has gone to England for consideration and approval by the Imperial Government. The law will go into effect as soon as the proclamation making it applicable to Mexico and the United States is published in the official gazette. It is thought that fugitives already in the Dominion will be safe, but there is some risk involved for them. An amendment was offered while the bill was under consideration making it retroactive, but this was defeated. It was supposed that this made it applicable only to future fugitives, but it seems that all legislation affecting extradition is retroactive unless otherwise expressed, so that Parliament failed to accomplish what it intended. The Boodlers must depend upon the Minister of Justice for safety. He has the power of granting extradition warrants, and if he shall decide that he must carry out the clearly expressed intention of Parliament, they are all right; but if he shall decide that he must follow the letter of the law, they will be obliged to seek new quarters without delay.

The New York *Times* has advices from Montreal that the Imperial Government has no objection to the act. This is a very important step in international law and practice, and one which might be and probably will be imitated generally among civilized States, after a brief trial of the experiment by Canada. For the first time, we believe, the principle has been recognized that the systematic surrender of fugitives from justice need not depend upon mutual agreements, on the principle of give-and-take, but that it may be properly conducted on the same lines as those which define and govern the surrender of culprits from one court jurisdiction to another in the same country. Also, that the reasons which apply to the surrender for crimes of a high grade, such as murder, robbery, and forgery, apply also to the lesser offences of larceny, embezzlement, and the obtaining of goods under false pretences. The surrender of criminals by the sovereign power without any treaty or law of any kind is not infrequent, and there has been one conspicuous case of this kind in our own history—that of Arguelles, the slave-trader, who was delivered to the Spanish authorities by order of Secretary Seward. But such transactions are dangerous from every point of view. The Canadian Government, it seems to us, has marked an advance in civilization.

Each day's despatches from Washington bring long lists of appointments to fourth-class post-offices, and it is announced that the number of changes in such offices last week reached the great total of 1,012. There are, of course, a few cases each week where death makes vacancies in these little offices; a few more where there are bona-fide resignations—that is, resignations which are not extorted by the threat that, unless furnished, the incumbents shall be dismissed with the stain upon their reputations of "charges" which they are never permitted to know; and a few others where appointments are made to new offices just established. It would be a most liberal estimate to set the number of changes called for by such legitimate causes in a week as 112. This would leave 900 as to which the presumption is that they are made solely for partisan reasons. This is 150 a day. Allowing Mr. Clarkson eight hours a day, this is nineteen changes an hour, or one every three minutes during working hours from the time he gets to his office on Monday morning until he leaves it on Saturday night for the much-needed rest of Sunday. Of course it is a physical impossibility for the Assistant Postmaster-General who chops off the head of a postmaster every three minutes every day in the week, to know anything about the merits of any particular case; and he makes these appointments at the demands of those who represent the Republican Machine, without the slightest sense of personal responsibility. This is confessed by Mr. Clarkson without the smallest sense of shame.

The Administration is now reaping the fruits of its folly in turning over the most responsible bureau in the Government to a man whom no business house would think of intrusting with large financial transactions. All sorts of scandals are being unearthed in the Pension-Office under Corporal Tanner, from nepotism to unblushing favoritism towards pension attorneys who are his special cronies, and there are even rumors that he may be removed. But this Administration, like Grant's, seems more inclined to stand by its Tanners because they are "under fire," than to remove them, as the Boston *Journal* has found out. It is now more than a month since the *Journal* declared that "the Department should lose no time in getting rid of Paul Vandervoort, recently appointed Superintendent of Mails at Omaha," and more than a week since it declared that "the appointment of Mr. George P. Fisher as First Auditor of the Treasury, if all reports are correct, requires the attention of President Harrison without any unnecessary delay"; but Vandervoort and Fisher remain in office, and seem likely to remain so long as Harrison is President.

The tone of the Republican caucus of the New Hampshire Legislature, which renominated "Bill" Chandler for United States Senator, on Thursday evening, was well in keeping with the character of the performance. The caucus was held in a public hall, not privately in a legislative chamber, and the galleries were carefully "packed" with Chandler shouters. Realizing the current value of a pious approval for a public servant, Mr. Chandler had the speech putting his name before the caucus made by a clergyman, who performed the task with great unction. He spoke of Mr. Chandler as a "statesman of whom we all may be proud," and a "Republican whose glorious record stands in a clear light before the country," and besought his hearers to "behold in him the concentration of the cardinal political virtues." It was a sudden transition from this religious estimate of the candidate to that which was made in the speech which immediately followed, and which began thus: "I am here to attend an auction, not a caucus." The speaker was a lawyer and a Republican. He continued: "Chandler owes everything to Democratic support in this State. Votes have been bought for Chandler on the public streets—$600 for one vote,

$1,200 for two, and so on up the scale of iniquity." This kind of talk so disgusted the clergyman that he left the hall in as ostentatious a manner as possible. A Senator arose next and solemnly denied the charges of bribery in behalf of Mr. Chandler. After another denial, a vote was taken and Mr. Chandler was nominated. He was at once brought into the hall, and made a speech of acceptance. According to the *Tribune's* report, "he pledged his sacred honor that he had done nothing undignified, unworthy, or dishonest in the conduct of the canvass, had spent no money and promised no money for votes." It did not occur to him, apparently, that there was anything "undignified or unworthy" in a candidate for Senator of the United States feeling called upon to make such an announcement as that.

Senator Chandler was promptly reëlected on Tuesday. He will go back to Washington, he tells his constituents, more than ever determined to secure the enforcement of the Fifteenth Amendment in the South. He will join hands with Col. Shepard of this city in keeping the Solid South in subjection. Both men are thoroughly aroused to the imminent peril of another war, and it will not be their fault if the country is plunged into it "unbeknownst." It is a long time since so powerful an alliance as this has been made, and if it is maintained faithfully by both parties to it, there is likely to be considerable commotion excited before the present year ends. Mr. Chandler is already so intensely occupied with the heinous designs of the South that he does not propose to take any further notice of the assertions of members of his own party that he bought his Senatorial seat; and Col. Shepard is so convinced that the new war is not only threatening, but is almost under way at this moment, that he has no time whatever to devote to the correction of more or less deliberate falsifications which he starts from time to time about his contemporaries in the press.

The Massachusetts Legislature has recently adjourned, and there is an extraordinary degree of unanimity in the opinions expressed regarding the session. It is generally agreed that the body has been exceptionally disorderly, inefficient, and corrupt. In Massachusetts, as everywhere, the standard of the law-maker is steadily sinking, and nobody is as yet able to point out an effective method of bringing about a reform. But it is obvious that something must be done, or our legislatures will before long become insufferable.

The Legislature of this State having passed a bill to make a preferred class of laborers at the expense of labor in general, by providing that all workingmen employed by the State shall receive two dollars per day of eight hours, and twenty-five cents per hour for overtime, an attempt is now making to hold Gov. Hill responsible for this one-sided measure because he did not veto it. We have never supposed that the present Governor of this State would veto a bill of a demagogical character merely because it increased unnecessarily the burdens of the taxpayers, but in this case it is clear that the blame does not fall upon him. The Legislature is the taxing power, and if it chooses to vote away the public money, and to create a little aristocracy of laborers, and at the same time make "patronage" for the Democrats, the Governor is not bound to interfere. Under the new law every laborer in the employ of the State becomes a petty office-holder, because he gets something more than the current rate of wages; and since the Civil-Service Law does not apply in such cases, the laborers will pretty certainly be Democrats as long as their jobs continue. The spirit of demagogy must be pretty deep-seated in a Republican Legislature which would thrust additional power into the hands of the opposing party at the instance of the labor unions.

Whatever becomes of the Clan-na-Gael leaders who are suspected of instigating the Cronin murder, it should not be forgotten that this organization, and not the great mass of Irish-Americans, is on trial. This is the organization which first and last has been the worst enemy the Irish race in America has ever had. It is led by men who see in Irish wrongs and sufferings nothing more than an opportunity to advance their own interests. They are the men who have raised vast sums of money for the Irish cause abroad, and have steadfastly refused to give any satisfactory accounting of it. For one year they succeeded in capturing the American branch of the Land League organization, and had Alexander Sullivan chosen President. No sooner were they in power than they attempted to commit the League to the dynamite policy of agitation, but, after a great struggle in the convention at Chicago in 1866, they were overthrown, and Parnell's policy of Parliamentary agitation was approved by a large majority. They are the men to whom Mr. Blaine turned in 1884, while they were in the very midst of their dynamite-explosion operations, for recruits to make good the revolt from his candidacy in the Republican ranks; and his alliance with them carried the Irish question into Congress, where it defeated two extradition treaties and the fisheries treaty, and made more mischief than any other single influence had caused in recent times. The same influence foisted Patrick Egan, one of their own number, upon us as American Minister to Chili. It would be an incalculable gain to the cause of home-rule and to American politics if the whole organization could be put in jail.

The Chicago and Alton Railroad has created some stir in railroad circles by urging a reduction of about six cents a hundred pounds on lumber from Chicago to Missouri River points. Few but railroad men troubled themselves to read the details. Few of those who read them imagined that they involved a question of almost national importance; and still fewer suspected that it had anything to do with the tariff. Yet such was the case. A slight difference in rate from Chicago to Kansas City or Omaha was enough to determine whether the sections of the country west of the Missouri River which are now so rapidly developing, would use Northern or Southern pine as their chief building material. For a long time the white or Northern pine had the preference. Of late Arkansas has rapidly been supplanting the Northwest as a source of supply. Some of the Chicago roads, and especially the Alton, say that it is imperatively necessary for them to make a reduction to avoid losing the business altogether. The question of the relative rates from the different sections is an extremely complicated one. Yellow pine has an advantage in its greater weight, which enables heavier loads to be carried in a car. White pine has perhaps a still greater advantage, of moving in a direction in which otherwise many cars must be carried almost empty. The matter involves so many disputed points, both of business policy and of railroad economy, that it has taxed Commissioner Walker's ability to the utmost.

We cannot attempt to go into the details. The most interesting point to the general reader is probably this: The Chicago and Alton claims that the Southern pine is now supplanting the Northern over a much greater extent of territory, but that a reduction in white-pine rates of six cents a hundred pounds would be sufficient to neutralize the difference and put the two on equal terms. If this is true, it is obvious that the same result would be obtained by a similar reduction in price at the point of production; the price on delivery being, of course, determined by the sum of prices to the producer and to the transporting company. Now, if we count pine lumber at two pounds to the foot, the difference of six cents a hundred pounds amounts to $1.20 per thousand feet. This is somewhat less than the duty on Canadian lumber, and may be fairly taken to represent the increase of price of the product which is due to the operation of the tariff. Whatever this profit is, it nearly all goes into the pockets of the lumber-men, as distinct from any one else; for they import their Canadian laborers and pay them little more than Canadian wages, so that the conditions of competition on both sides of the border are as nearly equal as they can be. If this reasoning be correct, it simply proves that Northern and Southern lumber, apart from the tariff, would to-day compete on substantially equal terms in supplying the district west of the Missouri River, but that the artificial increase of price which the tariff enables the Northern lumber-men to charge is driving the business away from them and into the hands of the Southern lumbermen, who are comparatively little affected by a tariff one way or the other. We need hardly point out the analogy between this competition of Southern lumber and the competition of Southern iron, which is likely to be so important in the immediate future. In both of these instances the tariff has in some measure created an artificial price for the benefit of a monopoly. In both cases the internal competition of new

sections of the country less immediately affected by the tariff is rendering it impossible for the monopoly prices to be maintained in those districts which are now most actively developing.

The annual report of the Director of the Mint shows that the production of gold during the calendar year 1888 was about $33,000,000. That of silver during the same period was $59,000,000. The gold production has remained pretty steady since the year 1880, while that of silver has risen $20,000,000 during the period. The net exports of gold during the year were $25,859,000, leaving, as an addition to the stock in the country at the end of the year, a little more than $7,000,000. Probably the present year will carry off our current production, and perhaps also the accumulation of 1888, leaving us where we were at the end of 1887. The recent shipments of gold do not seem to have affected the money market or the stock market, and this is the best evidence (and the only evidence needed) to show that the exportation is a healthy movement.

Bimetallism is having a revival, or thinks it is having one, in both England and France. A deputation of the "friends of silver" waited on Lord Salisbury and Mr. Goschen on the 30th ult. to present their views and to solicit the coöperation of the Government. They were received with politeness, but did not get much encouragement. Lord Salisbury told them plainly that they must bring the country around to their way of thinking before they could count upon help from Ministers. This was equivalent to saying that the Government would not take the initiative, but would acquiesce in whatever the House of Commons should vote for. Mr. Goschen added nothing of value to the conference, and he gets a rap from the *Economist* for not having an opinion upon a subject that he has been studying for at least ten years, with rare qualifications for reaching a sound conclusion. On the other side of the Channel, a volume of some 300 pages has been issued by M. Alphonse Allard, a well-known banker, containing an essay of his own in favor of bimetallism, with observations upon it by Frédéric Passy, Paul Leroy-Beaulieu, Levasseur, Germain, and Léon Say, followed by an essay from the pen of Émile de Laveleye, Professor in the University of Liége. The arguments of M. Allard and of Prof. Laveleye consist merely of the old chaff threshed over. The latter's state of mind may be inferred from the following hopeful paragraph. After adverting to a volunteer monetary conference to be held at Paris in September next for the purpose of organizing a bimetallist propaganda, he says:

"It is possible that political crises may divert public attention from the monetary crisis, however closely the latter has fastened itself; but it will depend upon the United States to *impose* the solution which it offered to Europe in 1878 and in 1881, and which the majority in that country are always in favor of; it may suspend the coinage of silver decreed by the Bland bill, and sell in the London market for gold 500,000,000 francs of the white metal, and the commercial world will then see what the single gold standard will cost."

The obvious suggestion of M. de Laveleye is, that there would be such a tremendous fall in the price of silver that all nations would be terrified to the point of adopting bimetallism. The objections to this project are that the majority of people in this country are not in favor of selling their goods below cost, and it is not clear that the London market would be terrified by the prospect of getting silver at the price of copper or zinc. We doubt if the experiment would succeed, even though the white metal should become so cheap that John Bull could supply all his workhouses with silver spoons. A course which depends upon such futile expedients (and M. de Laveleye distinctly says that it will depend upon this one) cannot have very much backing anywhere. It certainly has little from the recognized economists of France. Messrs. Passy, Leroy-Beaulieu, Levasseur, and Germain are wholly opposed to the contentions of M. Allard, and do not even admit his fundamental position that a crisis exists. Still less do they admit that it has been caused by the decline in the price of silver; nor do they concede that demonetization has caused the decline in the price of silver. M. Léon Say did not enter into these questions at all, but confined himself to a discussion of the advantages which bimetallism gives to the "debtor class," which he thought the French Government might properly favor—a thesis which M. Leroy-Beaulieu considered fraught with "grave moral objections."

It becomes clear, with fuller accounts of the debate in the Cortes, that the signal defeat of the attempt of the Spanish protectionists to increase the duties on cereals was not so much a rebuke to protectionism as to political intriguing. Cánovas had pushed on the measure in the hope of splitting the Liberals on the issue, and so of regaining power himself. His success was so great as to be fatal. Among the Liberal dissidents whom he won over was Martos, President of the Chamber of Deputies, and, by virtue of that office, a member of the Administration. With glaring impropriety, the latter openly opposed his colleagues, although refusing to resign his office. It was very largely resentment at such political indiscretion, to call it by no harsher name, and at the evident purpose to wreck the party, that led even the protectionist Liberals either to give active support to Sagasta, or to refrain from voting for a bill which they were known to favor. It was consequently beaten by more than three to one. Yet, as we have said, it was not a clear defeat of the protectionist measure on its merits. The defeat would undoubtedly have come, even without the blundering of Martos, though it would then only have meant an endorsement of Sagasta's position as respects the bill. That was a refusal to commit himself as to the absolute merits of the bill, but a stout contention that at least nothing must be done in contravention of existing commercial treaties. These will expire in 1892, he said; let us wait till then before doing anything. If it shall then seem best not to renew them, and to adopt a more protective tariff, we can do so without any suspicion of bad faith towards the countries with which we are now in treaty relations.

Meanwhile, the efforts of Sagasta to reunite his divided followers do not appear thus far to have been successful. The dissidents stand out, and do not seem willing to treat on any fair terms. Sagasta's strongest hope is to secure a coalition which will enable him to put through his bill for granting universal suffrage, and to gain the prestige sure to attach to the Minister obtaining the enactment of that popular measure. He may fail in this, but he has the whip hand in any case. He may refuse to call the Cortes together again at all. The present Cortes was elected in 1886, and has but one more legal session. A clause in the Constitution gives the Ministry power to extend for a year the budget last voted, in case the Cortes does not pass a new one, and Sagasta may do this as a last resort. It is more likely, however, that a truce will be patched up, so that a vote may be had on the Suffrage Bill, and authority be given for the conversion of the debt and the placing of a new loan, so long talked of and so desperately needed.

The "scramble for Africa" still continues. According to an announcement in the London *Times* of May 29, a number of leading financiers of England and the Cape are about to apply for a charter for a commercial company to take possession of the Central Zambesi Basin. The fact that a large part of this territory, which is defined as lying "between the south end of Tanganyika, the west shores of Nyassa, the southern boundaries of the Congo Free State, and the western and eastern possessions of Portugal, down to the frontiers of the Bechuanaland protectorate," is already claimed by Portugal, does not seem to present any serious difficulty. Access to this region will be obtained by a railway from the Cape frontier to the Zambesi, for which the money is now available. It is the intention of the directors of this new enterprise, in which there is a "certain philanthropic element," to exclude rigidly both alcohol and firearms from their dominions. The very appropriate name of Livingstonia has been suggested for the new State, as it includes the region in which the great explorer spent the greater part of his active life and made his most important discoveries. The African Lakes Company, which, though established originally simply to aid the Scotch missions on the Shiré Highlands and Lake Nyassa, has developed a considerable trade in these regions and accordingly excited the bitter hostility of the Arabs, will be merged in the new company. When missionary effort and commercial enterprise, as in this case, go hand in hand, the best results can be confidently looked for in developing the resources of the country, in putting down the slave trade, and in civilizing the negro.

THE NEW PRISON LAW.

THERE was reason to hope, at one time during the last session of the New York Legislature, that the good fortune which justifies the optimism of Americans was about to be signally illustrated. A bill for the treatment of convicts had been prepared by most competent hands; it contained nearly all those provisions which the most intelligent reformers were united in regarding as essential, and, having passed safely through committee, it seemed as if in some mysterious way it might become law without serious opposition. At the last moment, however, the representatives of the forces which have brought our prisons into their present state of demoralization, rallied, and a number of amendments were thrust into the bill, with the result of considerably increasing the difficulties of its application. Yet so much that is good was left substantially untouched, that the measure as a whole must be regarded as an immense step in advance; and although the expense of conducting the prisons will be unnecessarily increased by some disregard of economic principles, the convicts themselves may now be dealt with in conformity with the lessons of reason and experience. It is perhaps not too much to say that, whereas the prison legislation of New York prior to the passage of this act was disgraceful to a civilized community, it is now in advance of that of any other American State.

The credit for this reform is primarily due to Superintendent Brockway of the Elmira Reformatory more than to any other individual. He may be said to have furnished the ideas contained in the bill, while the admirable legal form in which the measure appears —it being really a codification of all the existing statutes upon the subject—is the work of Prof. Collin of Cornell University. Of members of the Legislature, Senator Fassett and Assemblyman Bush earned honorable distinction for their determination that the affairs of the prisons should be regulated in a statesmanlike fashion, and for the success with which the matter was carried through. Of defunct legislatures, *nil nisi malum* is now the customary mode of speech; but it seems no more than just to admit that the majority of our representatives must have perceived that the interests involved were too important to be made longer the sport of demagogues, and that they not ungraciously consented to resign themselves to intelligent guidance.

The great principle advocated by modern penologists is that of discrimination and classification among convicts. A first offence is regarded as a very different matter from a later one. In the case of most crimes against property, the character of the punishment is not clearly before the mind of the offender before he has had a prison experience; but everything should be done to make him desire that this experience should not be continued. Repeated short sentences are worse than useless, while long sentences with a material abatement for good behavior are found very efficacious. The latter feature has for some years been established in our law, but the system is still too rigid, and cannot be adapted to the requirements of particular cases. In order to meet those requirements, and with a view to presenting the most cogent motives for reform, what is known as the indeterminate sentence has been devised, with which may be combined the release upon parole, and these devices constitute the most important features of the new law. The first few months after his discharge from prison constitute the critical period for the convict who has any disposition to reform, and every influence should be exerted to set him and keep him at honest labor. He should not be turned loose, as at present, to shift for himself and drift back to his old haunts and associates, but should be kept in prison until his friends or the authorities have found work for him. Withal he should feel that he is under supervision, that the grip of the law is only relaxed, not released, and that if he falls back into crime, he will be summarily returned to prison.

At the risk of some obscurity, we condense the details of the principal changes made by the new law, as follows: Henceforth, whenever a male over sixteen is convicted of a State-prison offence punishable for a term to be fixed by the court between maximum and minimum limits, the sentence shall be for an indeterminate period within those limits. For example, a certain felony is now punishable by imprisonment for not less than two nor more than ten years. Prior to the passage of this act the court had to specify the precise number of years of confinement. It will do so no longer, but will adopt the language of the statute, and sentence the felon "for not less than two nor more than ten years." The precise limit is eventually determined by a board composed of the Superintendent of State Prisons, the warden, the chaplain, the physician, and the principal keeper. Before this board a prisoner who has served his minimum term may appear and apply for release upon parole or absolutely, but no other person may apply in his behalf. If the "biographical sketch" of the prisoner, which is to be fully and carefully kept, seems to the board to justify such action, they may release the prisoner upon parole, which means that he shall no longer be imprisoned, but shall remain in the legal custody of the warden until the expiration of the maximum period of his sentence, or until he is absolutely discharged. If there is reasonable cause to believe that the paroled prisoner has lapsed or is about to lapse into criminal ways or company, any member of the board may rearrest him and imprison him for the period of his unexpired maximum term. Any paroled prisoner may be absolutely discharged by the board.

All prisoners are to be classified in three grades. In the first grade are placed all those appearing to be corrigible and likely to maintain themselves by honest industry after their discharge. The second grade includes the incorrigible, who are nevertheless able to work and reasonably obedient to prison discipline, while the totally incorrigible and refractory element falls into the third grade. The labor of prisoners of the first grade is to be directed primarily to fitting them to maintain themselves by honest industry, even though no useful or salable product result from their labor; but, so far as is consistent with this primary object, productive industry is to be maintained. In the case of prisoners of the second grade the order of these objects is reversed. The act, as drafted, proceeded as follows:

> "The labor of the prisoners of the third grade shall be directed solely to the production of the greatest amount and value of useful or salable products."

It now reads:

> "The labor of the prisoners of the third grade shall be directed solely to such exercise as shall tend to the preservation of health, or the manufacturing without the aid of machinery of such articles as are needed in the public institutions of the State, or such other manual labor as the Superintendent of State Prisons shall direct which shall not compete with free labor."

This is, of course, a concession to the feelings of those who cannot bear that the worst convicts should support themselves, but insist that free laborers shall support them. Under this section the third-grade prisoners will probably have the easiest berth, but as their number need not be very large, we may as well congratulate ourselves that the matter is no worse. No prisoners convicted in United States courts held without the State are hereafter to be received in any of our penal institutions.

The contract system is, of course, not restored, nor is its abolition to be regretted. Both the public-account and the piece-price systems are allowed. The public-account system is that by which the State furnishes machinery and material for the labor of the prisoners and markets the products. Under the piece-price system the materials and machinery may be furnished by private persons who purchase the finished product. No fault is to be found with the provision that full market rates are to be obtained for all sales, and that no products are to be sold for less than 10 per cent. above the cost of the materials used. Equally harmless is the direction that "diversified lines of industry" shall be chosen with a view to "interfering as little as possible with the same lines of industry carried on by the citizens of this State." The bill originally provided that the number of prisoners employed in any manufacture should not be more than 10 per cent. of the number of free laborers employed therein. This percentage was reduced to five, which was probably an immaterial change, and is certainly an unobjectionable compromise.

At this point, however, the protectionist spirit could be no longer repressed. It was necessary, in order to save the bill, to admit amendments that prohibited the employment of any of the prisoners in the penitentiaries, reformatories, and houses of correction in the State at the manufacture of stoves, iron hollow-ware, and boots and shoes; while in the State prisons the number was limited to 100 at shoemaking and the same number in the iron manufactures specified. These amendments, however, do not apply to the manufacture of these articles for the use of the public institutions of the State. These institutions, it is further provided, shall be supplied with all articles commonly required

for their operation out of the products of prison labor so far as such products are available. The prices of such articles are to be fixed by a board, and every institution is to be credited with the amount of its own production. The authorities of the prisons can procure such machinery, tools, and accommodations as they find needful for the purpose of carrying on the industrial education and production prescribed, but materials are to be furnished only by contract after due advertisement.

The only remaining departure to be noted is the payment of wages to well-behaved convicts. The bill originally provided that wages should be paid at an average rate of 10 cents a day, but, as enacted, it reads that the compensation allowed to convicts shall not exceed 10 per cent. of the earnings of the institution in which they are confined. It is not easy to predict what this may amount to, but it will probably be a sufficient sum to furnish a test of the principle involved. These wages are to be varied according to the deserts of the prisoner, to be subject to fines and deductions, and to total forfeiture in case of breach of parole. The proceeds of these fines go to a fund in aid of unfortunate discharged convicts. Prisoners may have the money standing to their credit applied to the aid of their dependent relatives, or to the purchase of books, instruments, and instruction not regularly supplied by the prison. The balance to their credit at the time of their conditional discharge is subject to their draft, approved by the Superintendent; on their absolute discharge, any balance becomes their absolute property.

We should add that all moneys arising from the labor of prisoners are to be deposited in bank subject to the draft of the prison authorities. At present the income of the prisons is turned into the State treasury, and can only be applied to prison uses by State appropriation. This is not only awkward bookkeeping, but it imperils the continuity of prison administration by making it dependent on State action. The appropriations now, being of very large sums, are ignorantly condemned and reduced, while under the new system they will be small and may even disappear. There will be less opportunity and less temptation to intermeddle and tinker, and there seems to be a reasonable prospect that the present solution of our difficulties will be a permanent one. The "piece-price" plan also tends to enable the prisons to conduct their operations without waiting for the Legislature to assist them.

It is probable that at the next session there will be a renewal of the attack led this year by the manufacturers of stoves and shoes, with the purpose of still further "restricting the competition of convict with free labor," but persons familiar with the situation are confident that the other features of the law will not be disturbed. We incline to the opinion that the new system is elastic enough to admit of some further concessions to particular industries without much impairing its usefulness. Some of its provisions may be startling to those to whom they are unfamiliar, but we believe that they have all satisfactorily stood the test of experience. Of course, incompetent and corrupt officers can prevent the success of any system, but the history of our prisons has not been such as to make this danger formidable. The State may feel that it has at last fairly attempted to do its duty by the most miserable class of its citizens. Our Legislatures pass few measures that are of so truly a scientific character as this, and the fact that such a measure can be passed by the Legislature of the State of New York is, if not quite sufficient to justify an exalted State pride, at least good reason for not despairing of the republic.

THE EVOLUTION OF PARTY REMOVALS.

For an adequate consideration of the first of the two inquiries started by Senator Edmunds in the *Forum* for June, it must be borne in mind how distinct is the power of removal from the power of appointment, even though it is the rule of the Supreme Court that the President's power of removal comes from the power of appointment, being incident thereto, rather than from his power and duty "to take care that the laws be faithfully executed." The Civil-Service Law of 1883 relates solely to appointments. It does not attempt directly to control removals, although its effort is to take away the incentive to removal by requiring a competitive examination of a small class of inferior officers and employees. It only relates to a class of inferior officers appointed by a head of a department, or employees appointed by such an inferior officer as a collector of customs or a postmaster. What Bishop Potter said in his centennial sermon touched a larger topic, which is the exercise by the President of the power to remove any agent of the Federal Government, whether a constitutional officer, or an inferior officer appointed by a head of a department, or a person employed by an inferior officer.

In considering removals, it will be well, first, to make a note of change and progress in legislative opinion within the last hundred years.

The Federal Constitution makes no mention of executive power to *remove* any officers whatsoever. As the tenure of judicial officers alone is during good behavior, the commissions of all other officers, since the foundation of the Government and down to 1867, have declared that they held their offices during the pleasure of the President. During the first year of the Government, and when a bill to organize the Department of Foreign Affairs was under consideration in Congress, there was learned discussion of the question whether the power of removal by the Executive could be abridged by Congress, and the final vote, which was very close, declared in the negative in cases where the power to appoint was not subject to legislative review. It is to be inferred that this vote was largely influenced by the confidence reposed in President Washington.

When Monroe was recalled from France by Washington, the Republicans of that period asked for the reasons, which were refused by Washington, and then they insisted that the President could not remove without "cause," and was in duty bound to declare the cause. This the Federalists denied. But when in 1801 Jefferson was in power, the Republicans had plenty of reasons for removing Federalists who were in office, but denied that the President was in duty bound to declare them to the Senate. Jefferson proclaimed vacant all civil offices that had been filled by Adams after the result of the election was surely known. Jefferson declared that Federalist district attorneys and marshals should be removed, because they controlled access to the courts. The Superintendent of Public Stores was removed because he was a Federalist. Had Washington or Adams and the Federalists, when in power, announced the theory and duty of making removals for opinion's sake that Jefferson announced in 1801, the Jeffersonian Republicans of the day would have denounced Washington, Adams, and the Federalists as men of monarchical tendencies and Anglicans, endeavoring to make the American President like a European sovereign. In a dozen years or less the Federalists and Republicans changed sides so far as concerned removal from office for opinion's sake.

Thus stood the tenure of all civil officers excepting judicial officers until 1820, when Congress made the term of certain "inferior officers" of the Treasury four years. It was done during the term of Monroe. That four years' law covered collectors, naval officers, surveyors, and district attorneys. But the real vice of it was in the declaration by Congress that all the officers whose term is made four years "shall be removable from office *at pleasure*." There is the real origin of "the spoils system." Some five years afterwards, and during the term of John Quincy Adams, the Senate appointed a committee to inquire and report on the exercise by the President of the power of removal. Prominent Democrats like Van Buren and Benton were appointed on this committee. The action of the Senate clearly indicates that nearly three-fourths of a century ago the spoils system existed and had taken on alarming proportions. The Senate Committee reported a variety of bills touching the matters referred to them, and, among others, a bill requiring the President, making a removal, to declare to the Senate his *reasons* therefor. It is significant that Van Buren voted to report this bill, which, however, Congress did not enact into a law. It was the first Congressional effort to remedy the evil of party removals.

Three years after, Jackson defeated John Quincy Adams by 178 electoral votes against 83. After the result of that bitter struggle became known, Adams sent to the Senate nominations which the Senate refused to confirm expressly and solely upon the ground that it was for Jackson and the Democracy to fill such vacancies. The struggle out of which Jackson emerged as President was so bitter, the warfare between himself as President and the United States Bank was so relentless, the question of removing the deposits so enraged the Whigs, that Jackson

made a wholesale massacre of the civil service to fill the offices with those who were of his way of thinking. Van Buren's term was substantially a continuation of Jackson's two terms. Then came Harrison's election and death and the disturbances and removals from office caused by the defection of Tyler from the Whig party. By the end of Tyler's term the spoils system had become well established. Polk recognized it in 1845; so did Taylor and Fillmore during the next Presidential term. Pierce in 1853 followed on in the same line, and four years later Buchanan pillaged his own camp by vindictive removal of Democrats simply because they were friends of Pierce. In 1861 Lincoln had a plausible excuse in the condition of political affairs, growing out of the civil war, for a clean sweep of every Democrat from office, and when he died in 1865 the defection of Andrew Johnson from the Republican party, like the defection of John Tyler from the Whig party, was held to create especial reason for executive removals.

Out of this controversy inside the Republican party came the Tenure-of-Office Act, which declared that heads of departments should hold office during the term of the President by whom they had been appointed, and for one month thereafter, subject only to removal with the consent of the Senate; and also that every person holding any civil office to which he had been appointed by and with the advice and consent of the Senate, and who had become duly qualified to act therein, should be entitled to hold such office till a successor should have been in like manner appointed and duly qualified. The purpose of that legislation was to change the doctrine and practice of the Government since 1789, by which removal from office was effected at the mere discretion of the President. That legislation created a tenure of office which could not be terminated except by the concurrence of the President and the Senate in the appointment of a successor to the incumbent and his actual induction into office. The President could not without the consent of the Senate remove even a member of his Cabinet. Congress was Republican at the time of the legislation, but hostile to Andrew Johnson, or else such legislation never would have found place upon the statute-book.

When Grant came to power in 1869, he found a friendly Senate which did not interfere with his removals, nor did the Senate interfere with removals by Hayes, or Garfield, or Arthur. It may be fairly said that the evils of the spoils system culminated under Andrew Johnson and Grant. Notwithstanding appearances to the contrary, we agree with Mr. Charles J. Bonaparte, in his recent Baltimore address, that the civil service has improved in recent years, and that its evolution is now of an encouraging type. In order to appreciate the progress made we must compare periods *en bloc*, and we shall find that there has been nothing in the last fifteen years so bad as the condition of the service in Gen. Grant's second term. With the present quickened public opinion, it is hardly possible that it should ever be so bad again.

CONDEMNED WITHOUT A HEARING.

THE wholesale removals of postmasters serving four years' terms having provoked severe criticism, the Department gave out the explanation that such removals were made upon "charges." The *Evening Post* thereupon instructed its Washington correspondent to apply to the head of the Post-office Department for information as to the character of these charges—notably in the cases of Postmaster Charles Brewer, at Vineland, N. J., and Mrs. Mary L. Clay, Postmistress at Huntsville, Ala. The chief clerk of Postmaster-General Wanamaker informed the correspondent that "it is not the custom of the Department to give out the reports of special agents, or to make any statements respecting their contents to the public, and there is no prospect that there will be any change in this usage. On the contrary," adds the correspondent, "the Post-office officials who have charge of these matters very flatly say that no information will be furnished in any instance as to the nature of the report of a special agent, except that it might be fairly presumed that, where an agent had reported upon a case and there was a removal, the removal was for cause. An investigation was made of the Vineland Post-office because of charges that had been made, the inspector reported, and the Postmaster was removed. So much and no more will the Post-office officials say as to this case." Concerning the Huntsville case, the correspondent reports:

"As to Mrs. Mary L. Clay, the Postmaster at Huntsville, Ala., who has been removed, the statement is officially made that her resignation is asked for because of the report of a special agent adverse to her, and that, as she failed to resign, she was removed. It is alleged that there were complaints from patrons of the Post-office in addition to the report of the special agent, but what those complaints were cannot be learned here. When the request for her resignation was received, Mrs. Clay, instead of forwarding it, wrote to the Postmaster-General asking him the nature of the charges and the author of them—a request which would seem to be quite human. The answer of the Department to the request of this lady for information as to what charges had been made against her was a notification of removal from office."

"The intimation is very flatly made at the Department, if not in so many words," says the correspondent, "that it will be useless for persons, whether they wish to satisfy their own curiosity, or desire to make political capital of the information, to endeavor to ascertain the contents or the nature of the reports of special agents in given cases. These reports, it is maintained, are only for the personal information of the Postmaster-General; they are in no sense public property. If there is to be a policy of removal upon charges, while the pretended rule as to four years in office is to be observed, the charges are evidently to be made in a star-chamber inquiry, into which the public is not to be invited."

We have very positive views as to the justice of the policy thus adopted by the Harrison Administration, but, to avoid any accusation of prejudice, we prefer to adopt as our own the views as to the same policy when pursued by the Cleveland Administration which were expressed by Benjamin Harrison, then United States Senator from Indiana, in a speech delivered in the Senate on the 26th of March, 1886. It was during the debate on the question whether the President could be forced by the Senate to furnish the papers embodying the "charges" upon which officials had been removed—a debate, Gen. Harrison said in opening his speech, which "will be regarded, I think, as among the great historical debates which have taken place in this body." After a comparatively brief reference to "the mere legal and constitutional questions which are presented here," Gen. Harrison proceeded to "look a little outside" of them, and to discuss the "administrative policy inaugurated by this Administration, a policy that is without precedent, *and that will be without imitation*—a policy of stimulating and receiving secret charges against the reputation of men, *ay, as I shall show presently, not only against the reputation of men, but against the reputation of women;* of denying to the accused any access to or knowledge of the charges, and of acting upon those charges in the dark."

"What was the attitude in which we found ourselves when we assembled here in December?" asked Gen. Harrison, and thus answered his question: "In my own State the Republicans who were in office were willing, at the mere suggestion of the Administration, to step out. Hundreds of them, besides those who took that course, would have placed their resignations in the hands of the Administration but for the fact that *their confidence was betrayed by the suggestion that, if they had discharged their public duties conscientiously and well, they might hold their offices until the end of their terms.* Such was the proclamation. It went through all this country. The President of the United States repeatedly put himself under pledge in favor of such a policy. It went through all the land to those Republicans in office who had a fragment, large or small, of a legal term to serve, that, if they had discharged their duties faithfully and honestly, they would not be disturbed in serving out the residue of their terms. It was said that mere difference in political opinion should not operate against the officer. It was said that if he had not made himself an indecent partisan, the fact that he was a Republican should not be taken advantage of in order to deprive him of his office."

"It has turned out," Gen. Harrison continued, "that it was a deceptive feast to which these gentlemen were invited. It was almost as full of deception and almost as fatal in its results, as some of those feasts of old story to which men were invited for the purpose of assassination." Gen. Harrison next described in detail the outrageous manner in which postmasters had been removed by the Cleveland Administration upon the allegation that "charges" had been made against their official conduct, and then had been refused all information as to the character of these charges. Turning to his Democratic colleagues, he said: "Will you unite here in support of a proposition which denies to a Republican removed knowledge of the charges that are

filed against him in a public department of this Government? I do not believe there is a Senator on that side of the chamber (if there is one, I know it is not my colleague) who will rise and vindicate that course of administration. I know he reprobates it; I know every impulse of his heart cries out against it; I know he despises it, because he has been trained, in his profession and in his intercourse with men, to believe in *the great doctrine that an accused should have the right to know of what he is accused, and to be heard in his defence.*"

Gen. Harrison proceeded to offer a "prayer," with the quotation of which we conclude this article:

"*I do lift up a hearty prayer that we may never have a President who will not either pursue, and compel his Cabinet advisers to pursue, the civil-service policy pure and simple and upon a just basis, allowing men accused to be heard, and deciding against them only upon competent proof and fairly—either have that kind of a civil service, or, for God's sake, let us have that other frank and bold, if brutal, method of turning men and women out simply for political opinion. Let us have one or the other.*"

THE SILVER-LEAD CONTROVERSY.

The documents submitted to the Secretary of the Treasury for and against a reversal of the existing rule of the Department, that an ore must be classified for the assessment of duties according to its component of chief value, have been printed. They consist of arguments, affidavits, and statements of fact from the parties in interest, their counsel, and metallurgists. The whole mass constitutes an object-lesson in tariffs of very great value. There is scarcely anything in the literature of the subject which does not here find its appropriate practical illustration.

To begin at the beginning, we find that Congress undertook in 1883, as often before, to regulate the profits of a large number of trades, including that of lead-mining and smelting, as well as the manufacture of lead pipe, sheets, shot, etc., and of white lead. To do this with any approach to fairness, if such an attempt can ever be fair, would require such wisdom as has never been vouchsafed to mortals, conjoined with a spirit of disinterestedness which has never been found in any legislative body. As a matter of fact, this particular bill did not have the advantages of such wisdom and disinterestedness as the Congress of 1883 may have been blessed with, because it was thrown together in a conference committee in great haste, and with a total disregard of the votes that had been previously taken in the two houses. This circumstance detracts from the value of the testimony of Mr. L. E. Holden (p. 56), who submits a sworn statement that he was present during that entire session of Congress, and that he "knows it was not the intent of the friends of the law that lead in ores, or in any other form, should be admitted free of duty." Inasmuch as the conference committee that reported the measure which finally passed, went counter to the votes of both houses, Mr. Holden's knowledge of the intent of the friends of the law must be of the slightest. As little can be inferred from his mere presence at Washington city during the whole session.

The decision of the Treasury Department in 1880, during Secretary Sherman's term, that ores should be classified for duty according to the component of chief value, except where Congress had otherwise provided, was examined by the Judiciary Committee of the Senate last July under an instruction of the Senate. The report was made by Mr. Edmunds, and appears to have been unanimously concurred in, and, as an argument on a point of law, is perfectly convincing. It consists of two simple theses: (1) that these silver-lead ores were actually imported during and before 1883, and that Congress must have had knowledge of the fact, as well as of the ruling of the Treasury Department above mentioned; (2) that in two special cases of mixed ores, viz., copper and nickel, Congress provided that a duty should be levied on the amount of pure copper, or pure nickel, contained therein, but made no such provision as to any mixture of lead ore with any other metal. The conclusion is irresistible, that if Congress had intended to change the practice prevailing in the commercial world, and confirmed by the Treasury ruling, it would have used words appropriate to that end, as it did in the case of copper and nickel. Mr. Edmunds concluded his report thus: "The Committee is of opinion, therefore, that the class of ores mentioned are not dutiable under existing laws."

The contention on the other side is threefold: First, that they are dutiable under existing law; second, that the assays at the Mexican frontier are hasty and incorrect, and that ores are smuggled in as silver ores, although containing more lead value than silver value; third, that these ores ought to be made dutiable by Treasury order, whether Congress made them so or not. This last was the unvarnished precept of Senator Wolcott, whose presence at the hearing was an impertinence and a scandal. "The question," said Mr. Wolcott, "is whether you [Mr. Secretary of the Treasury] will protect the lead product of the United States"—not whether Congress has done so, not whether the means adopted by Congress are adequate, not whether the admission of Mexican fluxing ores might not be one means of protecting the lead product of the United States (as Mr. August R. Meyer strongly contended that it was), but whether the Secretary of the Treasury for the time being will impose a tax upon the people on his own motion.

How far this idea has taken possession of people presumably sane in other matters may be inferred from the character of the affidavits submitted. Most of these are drawn up to prove that lead-mining in the United States is in danger of extinction by reason of the importation of these Mexican ores, although the statistics prove the contrary—as though that fact, if true, could have any bearing on the question under debate, which is whether Congress did, in 1883, enact that these ores should be dutiable. It is certain that Congress did enact that silver ores should come in free. A large part of the argument of the complainants went to show that silver-mining in this country would be disastrously affected if these particular ores should continue to come in free. Why did they not ask the Secretary to rule that any ore containing silver should be dutiable, or that silver bullion should be dutiable? Surely nothing can be worse for silver-mining than to admit pure silver free of duty. Why advance any arguments on this head unless they intended that the Secretary should fix the duties regardless of the law? Naturally the wages question held high rank in the argument. Mr. J. F. Woodman made affidavit, among other things, that

"The continuance of the present free importation of foreign lead ores will destroy the present lead-mining industry in this country, *or* enforce a reduction of the miners' wages to the level of wages in Mexico."

This phrase seems to have been stereotyped, for we find the same identical words repeated in the affidavits of Lemuel E. Colbath, Charles Read, John S. Scott, A. Hanauer, Joseph R. Walker, William A. Clark, and Joseph K. Clark, while Mr. Dennis Sheedy expands them to half a page, giving us the lineage of the present inhabitants of Mexico, and showing the degraded state of the peons of that country, in which he sees the future destiny of the American miner unless the Secretary of the Treasury shall make the right kind of a law for us. There are plenty of data for contradicting this statement. For example, the *Sun* of Monday has a letter from Silver City, New Mexico, taking the side of the complainants in this case, but the writer naïvely remarks:

"Notwithstanding the fact that hundreds of miners have been thrown out of employment in the copper and lead mines, *there are more miners now at work in New Mexico than at any previous time in the history of the Territory, and they are receiving good wages.*"

Of the professional testimony offered, that of Prof. Egleston of Columbia College was by much the clearest and most incisive, going wholly to the point that "if a mineral should contain two metals, one of which could and the other could not be extracted with profit, the substance would be termed an ore of that metal whose value determined its working," and that in fact these Mexican ores were worked primarily for silver, the lead being a by-product.

We have said that this controversy is a valuable object-lesson in tariff discussions. Here are two industries, or rather two branches of a single industry, each having a large invested capital, and each employing large numbers of men and supporting thousands of families. The Government is asked to tear one of them up by the roots and bring dismay and ruin upon employers and employed. For what reason? In order to distribute the proceeds of the national industry in a certain way; to make the profits of certain other people more satisfactory. This is socialism of the rankest description. It is called protection, but, whether it is rightly called so or not, it is an attempt to make one man rich and another man poor by—we had almost said by act of Congress, but in this case it is by the act of a subordinate official. The principle, however, is the same. Whether by Congress or by the Secretary, it is an attempted spolia-

tion, repugnant to the sense of justice and to the spirit of free institutions. The difference between such an act done by Congress and the same done by the Secretary, although the economical results are the same, goes, however, to the very root of representative government.

DECLINE OF THE NEWPORT SEASON.

It is generally asserted, and does not seem to be very positively denied, that Newport will be neither so full nor so gay this year as some people could desire. There are more houses to let, and they do not let so well; there is to be less going on, fewer public entertainments, more people absent in Europe, etc., etc. To hotel-keepers, cab-drivers, owners of houses who expect to live during the winter on the rent they get from their Newport estates in the summer, all this is depressing; and the most melancholy thing about it is, that the dulness seems to be increasing instead of diminishing. It threatens to be worse this year than it was last year, although last year it seemed worse than the year before; and, worse than all, the future holds out no definite promise of revival. The old Newport "season," when public gayety was kept up day after day and night after night, is believed by many people to be a thing of the past. It is not that Newport itself is in a decline. It never had so many fine houses nor so many miles of good roads. With these and its Casino and new bathing-houses, it has really doubled its attractions within a few years. It continues to be, as it always has been, the only seaside watering-place of the first class in the United States. The explanation must be found in some other cause. The "season" is said to have fallen off from a variety of causes not redounding in any way to the discredit of Newport. In the first place, fashionable people go more and more to Europe—the numbers going this year are larger than ever before; then, two or three rival "resorts" have come into favor near by, especially Narragansett Pier, where people who want to have continual "hops" go; then, the times are bad, and no new set of large fortunes has been made recently.

No doubt there is something in these explanations; but do they, after all, explain why the season has declined while Newport itself has become more and more attractive? There are, even with all allowances made, as has just been said, many more people, and many more rich people, in Newport than there were twenty years ago. It is not a deserted village, but a thriving and prosperous town—thriving and prosperous chiefly through its summer inhabitants. If these habitués liked to keep up the old season as it was in its prime, nothing could prevent them—certainly not the fact that there were other habitués in other places doing the same thing. Nor would the poverty of those who could not come deter them, nor the absence of those in Europe. Those who remember Newport in the old days of the Ocean House hops know very well that it has material in it now for hopping and other forms of revelry of which the "society people" of the last generation knew nothing.

The causes that have been mentioned will not account for the phenomenon, which is that the people who used to carry on the "season," or their present representatives, do not care to do so as much as they did. The cause must be found in some peculiarity of the season itself, which has gradually led to its falling into disfavor, or else some change in the people who created it, or both.

We venture to suggest that the cause in the season itself which leads to this result is that it was an essentially vulgar and disgusting institution, which, unless the world was to grow increasingly vulgar and disgusting, was doomed to an early decay. It consisted simply and solely of a number of people, united by no other tie than that they could afford it, going to a seaside place, and, instead of spending their time in the pursuit of health and pleasure, wasting it in giving their badly brought-up daughters and sons a "good time" in the way of dancing, driving, and flirting. The elders of course got very little out of the season. The father was apt to be hard at work in New York most of the summer, earning a living; the mothers drove or gossiped (a great many of the leading matrons made their headquarters on a hotel piazza), and the young people had their fling; that is, they danced night after night in gas-heated rooms, privately if they must, publicly in the hotel "corridor" if possible.

In the last twenty or thirty years immense changes have come over the lives and pleasures of well-to-do Americans. Notwithstanding all the provincialism we see in some directions, in the pleasures of "society" there has been a great advance in good sense and cosmopolitanism. The taste for outdoor sports has made a summer season devoted to dancing seem just as silly to Americans as it always did to other people. Summer occupations have become diversified. Where sitting on a piazza or parading a corridor used to mark the height of social attainment, these pursuits have come to seem more or less like a bore. The increase of private fortunes has also had an indirect effect. The plutocrats have gradually more and more given up trying to pretend that they liked equality, and the give-and-take of democratic hotel life, and have drawn off into their cottages—villas they call them now—and taken a good deal of satisfaction in a reserve and withdrawal from the vulgar herd of resorters which the latter perfectly well understand. No one not fortified by great wealth could do these things. A generation ago they would have been looked upon as snobbish. Now they are simply aristocratic or exclusive. The very wealthy are a law to themselves. They lead such lives in summer as they please, season or no season, and for their example a host of people less rich may well be thankful.

Of course, the season will never be wholly extinguished. There will, in Newport and elsewhere, always be a time when the hotels are full, when there are most turn-outs to be seen, when there is summer dancing; but the great discovery has been made that the leaders of fashion no longer regard the competition of display in clothes on hotel piazzas as the sum and substance of human happiness, and the followers of fashion are very quick to echo the discovery. Summer life in the last generation has become much more private. Let the hotel-keepers and hack-drivers and purveyors of amusement by contract at so much a head, regret it; we cannot. To our minds the old season was a vulgar caricature of real pleasure-seeking; and if it has gone, as the late Mr. Carlyle would have said, to the Mother of dead dogs, or, as others insist, to Narragansett Pier, it does not mean that Newport is in a decline, but that the "season" has been found out to be an imposture which no civilized or civilizable country could long endure.

NOTES IN THE SOUTH OF IRELAND.

Kilkee, Co. Clare, May 26, 1889.

With the supreme attractions before them of the oldest and most civilized countries in the world, it is little wonder that, as a rule, American visitors landing at Queenstown pass rapidly across Ireland. We have nothing in art or architecture to detain the traveller. For ourselves there is much of deep interest in both, but to be fully appreciated they must be viewed in a spirit born of intimate acquaintance with the country and her history. Our chief associations with English literature are almost centred round the tombs of Swift and Stella in St. Patrick's; Rev. Charles Wolfe's grave in a seldom visited graveyard, a mile from Queenstown; Kilcolman, and other spots in the County of Cork connected with Spenser; and Goldsmith's birthplace and deserted village in Longford. The harrow of misrule and depression has left Ireland rather bare. The living institutions most worthy of a visit are some under the Catholic Church—those splendid establishments managed by religious orders, such as Artane and Glencree, near Dublin, and the Convent of the Good Shepherd and Saint Raphael's Blind Asylum in Cork, and others scattered all over the length and breadth of the land, where devoted men and women, in accordance with Catholic ideas, are doing so much for the Irish *renaissance*, which has undoubtedly begun. We Protestants cannot work through such means; our field of usefulness here is at present necessarily narrow—we ourselves have done much to restrict it. Something may be effected when we more fully realize that in philanthropic labors we cannot do much better than rival the spirit of our Catholic fellow-countrymen.

Since leaving Dublin a fortnight ago, I have been longing that my friends abroad could see Ireland in this year's spring attire. The weather has been perfect. Never have I seen more tender green on field and wood, never here bluer seas and skies, or lovelier shadows chasing each other over the mountain sides. Perhaps the hawthorn is not so luxuriant as last year's; but the primroses are massed along the hedgerows, daisies and cowslips and buttercups carpet the pastures and meadows, and as for the furze, it is a blaze of glory, lighting up the hills and framing the fields in gold. We are rather jealous for the reputation of Ireland, owing to visitors so often deriving their impressions of the country from Killarney. So far as nature goes, Killarney is in fine weather a heaven upon earth; but man has done much to mar the place. Not even in the Bernese Oberland is there a more exasperating system of tolls, beggary, and wheedling. The hotels

are dear (at least according to our standard), and the tips and extras connected with the hire of boats and carriages are endless. Moreover, the shores of the lakes are strictly preserved. You cannot walk and ride freely there as in the English Lake district. You have to pay for entrance to every demesne and every beautiful spot. Let us hope that under home rule the proprietors may be bought up and the place nationalized. For the present it remains a scandal and a shame to Ireland. Perhaps you do not perceive this as clearly as we do. You generally visit Killarney with purses undepleted by travel, with "American ideas" of the value of money, and inexperienced as to the principles on which the most enjoyable tourist resorts in Europe are run.

Glengariff, Killarney, Dublin, perhaps a day in the County of Wicklow, Belfast, and the Giant's Causeway, are upon the whole, for a short tour in Ireland, the best selection of places to visit. This usual programme might, however, be considerably improved. Leaving Killarney early in the morning for Dublin, the main interest ending at Limerick Junction, let the tourist there express his heavy baggage and take a train for Waterford, the afternoon steamer for New Ross, and rail to Wexford. Next day let him travel by railway to Dublin, stopping at Rathdrum and devoting a few hours to visiting Glendalough. He will really lose no time, and will immensely increase his knowledge of Ireland. The Suir, the Barrow, the Slaney are some of Spenser's rivers. Along their banks, with views of the Galtees, Comeraghs, Knockmealdowns, across the charming County of Wexford, through the Vale of Avoca, under the dark cliffs and woods that surround the "Valley of the Two Lakes," he will see much that is most characteristic of our scenery. The situations of Waterford and New Ross are picturesque. Wexford is perhaps the most interesting town in Ireland. The main street at some points is only twenty feet wide. The principal Anglo-Norman towers and much of the walls remain. The county is full of historical associations. There the invaders first landed. Portions of the castle built upon the site of Dermot Macmurrough's residence still frown upon the surrounding country. At Ferrycarrick the train passes in view of the first castle erected by Fitzstephen; and it is the most remarkable fact in European history that the contest initiated when it was built 700 years ago, remains unsettled to this day. The people of the county, at least in the southern baronies, are some of the finest in Ireland. They alone made a real stand in 1798. Wexford town was held for six weeks. Dreadful atrocities were perpetrated on both sides, but few Protestants were injured who had not, themselves or their families, taken part in the terrible system of oppression under which the country groaned. South of Wexford an old English dialect, almost uninfluenced by Irish, lingered on as a distinct language till our time. At Waterford and Ferrycarrick the visitor will see in full use curious wooden bridges erected 100 years ago by one "Lemuel Cox, a native of Boston."

I have just reversed this tour, and then, having stayed a while in Cork and beside the Shannon, have come on here. I am profoundly impressed with the moral and mental elevation which is going on over the country. The population has been awfully reduced since first I knew these parts. We are still behindhand, but, in the main, an intelligent, well-clothed, self-respecting people have (thanks very much to intercourse with America) replaced the wild and impoverished hordes of the time before the famine. The dream of raising the country through Protestantism must have passed away from the minds of all but the most prejudiced. The conviction is forced upon many of us extreme Protestants that a pure and elevated system of Catholicism guides the people, and that the fruits are in the main good. This system appears wanting in some of the grit and sterner virtues that characterize the higher Protestant communities; but as a whole I believe our millions will in the next generation favorably compare with the populations of other countries. Outside the land question, ideas of honesty and right and wrong are not shaken. The present is a struggle against a system intolerably dishonest. We cannot wonder, however we may deplore, that many tenants have carried into the contest outside the law the tactics for centuries practised within the law by their opponents. Doubtless many strange economic ideas are afloat, an earnest of those still stranger which will be tried under home rule. The erection of laborers' cottages over the island, mainly in the south and west, by the Poor-Law Boards, upon money lent by the Government, and the letting them (to those who can only be a favored few) generally at rates which will pay but half the interest and sinking fund, is an extraordinary social experiment. There is a distinct effort on the part of the Government, by what Mr. Morley aptly calls "jingling the money-bags," to buy off the people from the desire for self-government. This effort will fail. But when self-government comes, there will be some murmuring throughout the land for the flesh-pots of Egypt now vouchsafed us in the shape of treasury loans at low interest.

The loneliness and stagnation of this part of the country are almost oppressive, and form a bar to tourist traffic. Ruskinize as we may, man is a gregarious animal; the presence of our fellows enhances the pleasures of natural scenery. The direct means of communication from Limerick here (steamer to Kilrush and car the rest of the way) are practically the same at this season of the year as when first I knew the place forty-seven years ago. The steamers—small, unkempt vessels—ply but once each way daily. We found only some twenty passengers on board; in summer they are more numerous. In fifty miles of the Shannon between Limerick and the sea, there are apparently no means of communication between the opposite shores at any point but by specially hired boat. The steamer stops only thrice on the route. To be taken on board at Foynes on Friday necessitated special arrangement beforehand with the agents at Limerick, and the payment of a smart sum to boatmen. This is, in its way, the finest seaside resort in the United Kingdom, nor have I seen anything to equal it elsewhere. Half a mile of sandy beach, delightful to children, and safe for bathers, is flanked at each end by an iron-bound coast; sheer cliffs and rocks and islands rising to 250 feet open out in endless succession of bay and headland north and south. The Atlantic stretches away without interruption to your shores. Majestic blue rollers, impelled by the prevalent western winds, and unbroken by rock or shallow, dash in white foam and clouds of dazzling spray against rock and headland. Shelving ledges and strata, where shelter can be found from sun and wind at every point of the compass, afford unrivalled opportunities for watching in security the play of ocean. The air, while soft and balmy, is impregnated with saline briskness. The Duggena reef, which protects the inner strand, left bare by the receding tide, discovers among its rocky terraces deep pools, whose crystal depths, rich with algæ and marine creatures, have a peculiar fascination—a fascination which has too often retained dreamer and fisherman until cut off by the returning waters, or overwhelmed by tidal wave. The village mainly consists of one and two-storied white-washed stone-built houses. Most visitors bring their families and servants, and hire these "lodges" at a rent of from £5 to £30 per month, according to season and circumstances. The inns are small. There are no hotels, in your sense of the word. The accommodation is somewhat poor, the diet plain but plentiful, the boarding charges being £2 to £3 per week. There is no excitement or life, such as is met at fashionable watering-places. We are glad to read the Dublin papers a day old. Dreary moorlands, swept clear of trees by winter storms, stretch miles inland. The people are interesting. Most of them still speak Irish, and with their better dress and bearing have lost none of their gentle manners. There is much that is primitive and refreshing about the place. The fishermen face the Atlantic in "corraghs" made of canvas stretched on a light framework of timber. With a few friends and books, a constant view of cliff and breaker—blue sea, dark headland, white foam—I know of no more soothing place to muse away a holiday and forget the cares of the world.

D. B.

HALEVY'S RECOLLECTIONS.

PARIS, May 27, 1889.

THE authors of the "Belle Hélène," of "Barbe-bleue," and of so many other pieces which were played under the Second Empire with so much success, are now both members of the French Academy. One of them, M. Meilhac, continues to write for the stage, but he writes no more operettas, he writes comedies; he has almost become a moralist. As for M. Halévy, who entered the French Academy before M. Meilhac, he has completely abandoned the writing of plays, and has given to the public a succession of novels, some of which have had a great success. I read on the cover of his new book, 'Notes et Souvenirs,' this curious list: "L'Abbé Constantin, 133d edition; Criquette, 71st edition; Madame et Monsieur Cardinal, 49th edition; Les petites Cardinal, 44th edition; Princesse, 43d edition." These editions are of 500 copies each; you may easily count the number of the readers of these novels and stories. 'L'Abbé Constantin' opened to the author of 'La Belle Hélène' the doors of the French Academy. It was read as a novel, it was applauded as a drama; it was illustrated by Mme. Madeleine Lemaire, one of our best aquarellists. It was for more than one season the book of the day, which was found on every lady's table. It is virtuous, it is religious, it is worldly, and it is not dull. The "Petites Cardinal" and the "Famille Cardinal" are an amusing picture of the manners of the class which furnishes the dancers at our great opera: they represent a curious mixture of family and (if I may so call it) irregular life, of order in disorder. The book has had so great a success that the Cardinals have become typical, like the Joseph Prudhomme of Henri Monnier.

By a curious contrast, M. Halévy seems to grow all the more disinclined to come before the public as his popularity increases. His collaboration with M. Meilhac came long ago to an end, and he has never, since they separated, tried to come alone before what we call "le feu de la rampe." He published his first novels in newspapers, in the shape of feuilletons, or in the most popular reviews. He only writes at present in the dearest of all reviews, the *Revue des Lettres et des Arts*, a review which has magnificent illustrations, and is only made for

the prosperous. The 'Notes et Souvenirs' which are before us in the shape of a small volume, came out first in this review. They were made in the years 1871 and 1872; they are fragmentary, disconnected, but they derive much interest from the dramatic occurrences of those eventful years.

Halévy was at Étretat on the 21st of May, 1871, when an official despatch from M. Thiers announced that the troops were reëntering Paris, which had been for two months in the hands of the Commune. He left immediately on the little Fécamp diligence. He tells one of his neighbors on the diligence that he is on his way to Paris:

"To Paris?" says the farmer; "singular idea. Wait at least till they have stopped fighting. . . . You Parisians agitate yourselves too much and have too much curiosity. . . . That is your misfortune. We don't agitate ourselves so in the country. . . . But you, for a melody, a war, a revolution, you put yourselves in such states—you burn your blood. All these things would not have so much importance if people did not occupy themselves with it; for, after all, the days have only twenty-four hours, the months have but thirty days, and the years but twelve months. While it lasts it lasts; and when it is finished it is finished."

M. Halévy is never tired of giving examples of this philosophy of a great part of our people. I had myself, at the same epoch, curious examples of it. I remember going from Versailles to Neuilly, on the day when the Versailles troops took by force the bridge of Neuilly, which was defended with barricades. The noise of the artillery was deafening, but I saw peasants working in their fields not even lifting their heads, looking as calm and quiet as possible.

On his first visit to Paris, when he went along the Seine and saw the ruins of the Tuileries, of the Council of State, of the Great Chancellery of the Legion of Honor, Halévy adds: "I have seen, for ten months, many extraordinary things, but nothing more strange and fantastic than what I saw a moment ago. . . . Between the Pont Royal and the Pont de la Concorde, some people were fishing. I counted them: they were twelve, fishing very leisurely, not caring for what was taking place over their heads, their eyes fixed on their lines, and taking advantage of all these disasters to fish at the forbidden time of the year." The last struggle of the Commune took place in the cemetery of Père Lachaise:

"At each report of a gun on the heights of Montmartre, there was a great fracas in the Rue des Martyrs, but nobody paid any attention to it. There was a crowd in all the shops of the quarter. The cooks were forming in queue at the butchers'. On all sides one heard pleasantries and laughter. . . . What a noise they are making up there at Montmartre. It is the end, said the woman, the *bouquet* [the name given to the finale of grand fireworks]. It will soon be over." Halévy took pleasure in observing the state of mind of the common people, of those who think aloud freely. "I was yesterday in front of a butcher's shop; an old woman was quarrelling with the butcher, who tried to give her too much bone with the meat. . . . 'I thought,' said she, 'that you would become more reasonable after the war. But I see that it will always be the same.'"

It is always the same with many; and history slides over their heads as the wind over the lower strata of the ocean. The Paris of the siege and of the Commune rapidly regained its old aspect.

"We go over the Pont Neuf, and we fall, at the Croix Rouge, on a great fire: a great shop has been burning for twenty-four hours. Close by, the shops are open, the passers by have the elastic step of the Parisians. I stop and I look curiously for five minutes at an optician in the Rue des Vieux Colombiers, who, with infinite calm, is busy putting methodically in order his glasses, and eye-glasses, and microscopes. His wife helps him; he goes out of the shop that he may judge of the effect from the sidewalk. And meanwhile we hear distinctly the guns on the side of the Bastille."

Men are, on such occasions, like insects who have been for a moment perturbed and who hasten to resume their instinctive life. It is the same with an army, and Stendhal has wonderfully described what may be called the human part of a battle, in his account of Waterloo in the 'Chartreuse de Parme.'

Halévy turns at times his photographic plate on the famous men of the day; he gives good portraits of Thiers, of Gambetta—true portraits:

"I remember when M. Thiers reëntered the French Chamber on the 11th of January, 1864. I see the little man so often caricatured by my friend Cham, ascending the tribune. I hear, coming out of this tiny body, a small, sharp voice, the driest and most disagreeable of voices. On the face of a certain number of deputies who had never heard M. Thiers could be read clearly this thought: What! is this M. Thiers? Two or three members of the Right screamed, 'Louder! louder!' 'You will hear me in a moment,' and, to be sure, it was soon heard, the little voice. It took accent, authority; and a great silence ensued, the greatest silence I ever heard, for silence is very well heard. . . . There was an old *huissier* who was a great admirer of M. Thiers. It is the business of these ushers in the Chamber to establish silence. When there is a great murmur, which drowns the voice of the speaker, two *huissiers*, at the right and left side of the tribune, scream three or four times: 'Silence! silence!' One day this old *huissier*, seeing M. Thiers ascending the tribune, said: 'Oh! now it is M. Thiers, we have nothing more to do. Nobody stirs while he is there. A fly would not dare to fly during a speech of M. Thiers.'"

During the Empire, Halévy had an office at the Corps Législatif, that of secrétaire-rédacteur. He often saw M. Thiers when he came himself to correct the proof-sheets of his speeches. He corrected much:

"We were all very much afraid of him. . . . He had much vivacity, and he did not bear the smallest observation. I took the liberty to tell him (he was correcting a speech on the affairs of Mexico) that he had made two phrases which, one after the other, said exactly the same thing, in almost identical terms. 'I know it very well,' said M. Thiers with his little voice, 'and I did it on purpose—do you hear? on purpose. . . . The first time I spoke for the intelligent people, for those who understand at once. . . . But you must speak to everybody, you must be understood by everybody. So I spoke the second time for the fools, who are the majority, outside of the Chamber.' And, as I was going away humbly, I heard him say between his lips, 'and in the Chamber, also.'"

M. Thiers had promised at Bordeaux to remain neutral between the Monarchical and Republican parties, but he did not cease for an hour to work against the monarchical solution. Halévy cites what he said at Versailles, after dinner, to some deputies of the Right: "The monarchy is impossible, you ought to see it; . . . but you are always the same incorrigible doctrinaires; you are rich, you live in hôtels between court and garden, you don't know what is going on in the street. If you were reasonable, we would make the Republic together, you and I, and all would go on for the best in an excellent Republic, very wise, very conservative; but you are not reasonable, and you will oblige me to make the Republic with the Republicans, without you, against you, while I should much prefer to make it with you and for you."

There is little in this volume on Gambetta:

"Gambetta is now a sort of sovereign. He has kept his courtiers, his Bordeaux and Tours staff, his following. This is the most serious danger of the time [this was written just after the Commune]. Two sets of men, hungry for prefectures and sub-prefectures—the men who were put out in September, 1870, and those who were put out in February, 1871—are waiting, with equal impatience and equal avidity, for the restoration of the man, Emperor or President, who will give them back their places. Politics is becoming a trade, a speculation."

The real interest of this small volume is much less in anecdotes concerning the men who played some part in the dramatic years of the war and of the Commune than in small stories and pictures showing the temper of the people during these great events—the fund of philosophy, of good nature, of instinctive resignation which is found in the nation, even at the worst of times.

Correspondence.

THE CENTURY DICTIONARY.

To the Editor of The Nation:

Sir: The faults which Prof. Newcomb finds with my definitions in the Century Dictionary are, I trust, at all events, confined to the earlier pages, where I was unable to see proofs of a part of what I wrote. I ask leave to illustrate my method of preparing definitions, in the instances of the five in my department to which he objects. I take these up in their alphabetical order.

(1.) *Action.* The first step towards defining such a phrase as the "law of action and reaction" is to find who originally introduced it, and where. In this case the author is Newton, the book the 'Principia.' I next inquire whether and where there has been any subsequent discussion of the meaning. This carries me to Thomson and Tait's 'Natural Philosophy.' Finally, I collect the common meaning of the phrase from a series of English writers of different periods. Prof. Newcomb says my definition contains an erroneous sentence. I presume he alludes to that in which I give Newton's definition of "action." Though Thomson and Tait laud Newton's remarks, these certainly confound two distinct phenomena, and we may regret his definition of "action," which does not apply to ordinary cases under the law. I ought to have added something to that effect. But Newton does give that definition, and gives no other, and he lived in an age when men were expected to adhere to their definitions; and I was bound to record his statement. I supplement this in the next sentence by giving the law as it ought to be and is generally understood. There is no error, but only the omission of an explanatory sentence, probably as appearing disrespectful to the "summus Newtonus."

(2.) *Albedo.* This word, introduced by Lambert in 1760, and defined by him, and distinguished into species by Zöllner in 1865, does not belong strictly to my department. I suppose I wrote on the galley-proof: "the proportion of the light falling on a surface irregularly reflected from it," and that the proof-reader, finding this a bad sentence, inserted *and* before "irregularly," where *that is* would have answered better. The slight confusion resulting is corrected by the rest of the definition. I may remark that *albedo* has nothing to do with the light regularly reflected, which is to be reckoned as if absorbed; and, moreover, a body may have *albedo* although slightly self-luminous, as Saturn has been supposed to be. The *albedo* is, therefore, not exactly "the pro-

portion of incident light reflected by a non-luminous body," as Prof. Newcomb defines it.

(3.) *Alidade.* Arabic terms of astronomy have been in nearly every instance hunted up in Arabian authors, generally in old Latin translations. They have been sought preferentially in translations of Ptolemy, so as to connect them with the Greek. They have also been looked up in Lane's or other Arabic Lexicons; and finally they have been traced through various writers from Chaucer to Newcomb. There is some dispute regarding the proper meaning of the word *alidade* in Arabic. In English, it is generally applied to an arm of an optical instrument, traversing a circle, and attached, as such arms commonly are, to a telescope, or carrying sights. (The restriction by some writers to a vertical circle cannot be justified.) It is, however, occasionally extended (as by Newcomb) to all arms of circles, whether carrying sights or not; and as this use is borne out by Arabian dictionaries, we cannot call it wrong. On the other hand, the word is very frequently applied, both in Arabic (see Devic, 'Glossaire') and in English, to a straight-edge unattached to a circle and bearing sights or a telescope. Both these meanings are given in the Dictionary. The first definition fully accords with that given by Newcomb himself, and the second is even more undoubtedly correct.

(4.) *Almagest.* Supposing the editors would delete this proper name, I wrote no description, and that in the text is continued from the Imperial Dictionary. It is substantially that of Hutton. I took into consideration the alteration of it in the plates, but, after turning over the Almagest itself with this view, decided to retain it. Prof. Newcomb makes two objections to the description—first, that it contains no account of the Ptolemaic system, but that would have been ill-placed here; and, second, that the work contains no problems in geometry and astronomy, as stated, which seems hypercritical when we call to mind the treatise on trigonometry in the first book, and when we reflect that the astronomical memoirs of which the work consists are properly enough called problems. The reason given for the name, though not objected to by Prof. Newcomb, is slightly incorrect.

(5.) *Anomaly.* This definition, perhaps the first I wrote in astronomy, I certainly cannot defend. Besides containing a blunder remarked by Prof. Newcomb, the whole is awkwardly drawn up, the applicability of the name "anomaly" is not explained, nor the mode of reckoning it used by Kepler and his followers before Gauss. I hope I may be able in some way to replace the article by another prepared according to my usual method, being based on an examination (1) of Ptolemy, (2) of Kepler (who defines the eccentric anomaly, a term due to him, very clearly as "arcus circuli eccentrici, in consequentia numeratus interceptusque inter lineam apsidum et inter perpendicularem illi per corpus planetæ"), (3) of Gauss, and (4) of a series of English writers.

C. S. PEIRCE.

MILFORD, PA., June 14, 1889.

THE SOUTH FORK FISHING CLUB.

TO THE EDITOR OF THE NATION:

SIR: Your article on the Conemaugh disaster is the clearest and most direct summing up of the situation in the wrecked valley that has been made. But there are facts concerning the men who belong to the South Fork Fishing Club which, when made known to you, will assuredly modify your judgment of their responsibility for the disaster. Having so severely condemned them, I trust that you will, with your customary fairness, make the following facts known about them.

Pittsburgh men have always ranked high for their incorruptible integrity and hatred of wrong-doing, and the men who belong to this club are foremost among these. There are no men in the land with a more intelligent and finer moral sense—none who, as members of society, know and do their duty more conscientiously to their fellow-men—none who seek their welfare with a more generous self-sacrifice. They are all engaged in large business enterprises successfully and righteously carried on, and they are conscientiously and practically trying to solve the perplexing problems involved in the struggle between capital and labor. They are not only good citizens and earnest, moral business men, but they are high-toned Christian gentlemen. They became members of the South Fork Fishing Club, not as selfish sportsmen, but merely to secure a quiet, pleasant, and accessible summer resort for their families. If they are at all responsible for this horrible destruction and woe, it can only be because they are not educated civil engineers, and have consequently been obliged to accept the statements of those who are as to the safety of the dam. They will go mourning all their days that they were remotely connected with this unparalleled disaster. They have worked night and day since, with head and heart and hand, pouring out money like water to relieve the suffering—for which they have been unjustly held responsible.

Hundreds in Pittsburgh will confirm this testimony as the truth, the whole truth, and nothing but the truth. Please let it be known wherever the *Nation* is read.—Respectfully,

E. C. V.

CINCINNATI, June 12, 1889.

CIVIL-SERVICE REFORM.

TO THE EDITOR OF THE NATION:

SIR: Mr. Dana does not need to be told that I am entirely in sympathy with the civil-service reformers, and have the deepest admiration for the energy, devotion, and persistence which they have put into their work. Nor have I said that the Civil-Service Commission was a failure as yet. The main charge is, that in the part of the civil service outside of the examinations, say four-fifths of the whole, the spoils system is just as rampant as it ever was. And what security is there for the rest? It may be assumed, if actions speak only as loud as words, that a large majority of Congress, all the Cabinet, and the President regard the reformed system with contempt and dislike. It will be starved and hampered in every possible way short of actual repeal. The Civil-Service Commission is a perfectly irresponsible body, outside of Congress and the Executive and of the public view. It can be reached only through a Congressional committee of inquiry, which, it is safe to say, would never do much to promote its efficiency. Like all commissions—the worst possible way of doing administrative work—it consists of several members, none of whom, no matter how hard he may work, can gain any credit, or, however bad he may be, will get any special share of blame—conditions not calculated to make the place attractive to first-class men. Its members are appointed by the President. If the political machine can compel him to make over the outside offices, why may it not compel him to do the same thing with the places on the Commission, and so deliver the entire system into the hands of the Philistines? In fact, the whole thing is in a condition of unstable equilibrium, a pyramid balanced on its point, requiring constant and unremitting watchfulness.

Mr. Dana refers to the English reformed system. That was established, once for all, thirty years ago. They do not have to keep up an elaborate organization, with journals and meetings, to keep the system going. Nobody ever pays any attention to it at all. The examinations are merely a question of detail. If the offices were filled by lot from the citizens of the United States, with tenure during good behavior, it might not give the best possible civil service, but it would be an equally perfect cure for the spoils system. The keynote of effective reform is how to keep off the hands of party politicians, and that is done in England by personal responsibility on the part of the appointing power, so that if one of the Ministry makes a slip, the lash descends with a promptness and force which serve as an effective deterrent to others.

While admitting the advantage of Cabinet responsibility, Mr. Dana has grave doubts as to how it can be brought about. Why, by exactly the same process which obtained the Civil-Service Commission—outside agitation. The Scripture compares the kingdom of heaven to a pearl of great price, to possess which a man would sell all that he hath. If it is true that the basis of all reform with us must be an improvement in administrative methods, then the way is to give up agitation of all sorts of details and go straight for the one thing needful. And this particular thing has an equipment at starting which I doubt if civil-service or any other reform measure has possessed, namely, a scheme complete both in principle and detail, bearing the unanimous endorsement of a committee of the United States Senate, consisting of eight members of both parties.

G. B.

BOSTON, June 15, 1889.

THE NATIONALIST CLUB.

TO THE EDITOR OF THE NATION:

SIR: It may aid in the clear comprehension of the leading editorial in the last *Nation* if it is explained that the "Nationalist Club" of Boston has the following provision in its Constitution:

"There shall be two classes of members, active and associate. Active membership shall be open to all persons who believe in the nationalization of industry. Associate membership shall be open to all persons who believe in the nationalization of any special industry not already under the control of the nation. Associate members shall have all the rights and privileges of active members, except the right to vote."

It is only as an associate member that the undersigned, for instance, is connected with the Nationalist Club; and the same is the case, probably, with the Rev. E. E. Hale, whom you also mention. There are a good many persons, I take it, who have reached just this point of conviction—namely, to hold that, if the Government carries on the post-office fairly well, as it certainly does, it may well undertake the telegraph also, as in England; that if it can conduct a bankrupt railroad, through a "receiver," it could also carry on a successful one; that if a city can supply its inhabitants with water, it might as well try the experiment of supplying them with gas. How far this tendency is to go, such persons do not undertake to say—and here they stop short of Mr. Bellamy and his thorough supporters; but in the meantime they are willing and glad to put themselves on record as looking in that same direction. They find themselves confronted with a situation which has nowhere been better stated than by a strong opponent of State

Socialism, Prof. A. T. Hadley of Yale University. He says, in the *Political Science Quarterly* for December, 1888: "Modern life demands organized business action. There are two great organizations, either one of which can manage it—organized capital, or organized government." If this be the real alternative, there is certainly an increasing number of persons who would prefer to trust the Government. This is, at any rate, the present writer's inclination. T. W. HIGGINSON.

CAMBRIDGE, MASS., June 14, 1889.

PROPER NAMES IN DIFFERENT LANGUAGES.

TO THE EDITOR OF THE NATION:

SIR: Does there exist an interlingual dictionary of proper names, or anything at all equivalent to it? Such a thing would be very convenient for readers who have to follow the study of history through two or three languages. It may take a tyro some time to find out that Dietrich and Thierry are Theodoric, or that Hlodowig, Chlodwig, Clovis, Louis, Lewis, and Ludwig are all the same Protean name—to say nothing of such geographical puzzles as Bois-le-Duc and Herzogenbusch; and when he does learn these things it is almost by accident. Even the practised student is apt to be tripped at any time by some travesty which he has forgotten or missed. The lists of proper names given in the ordinary dictionaries go but very little way, and are at most bilingual, so that they are of no scholastic value.

Yours very truly, L.

18 HUNTINGTON AVENUE, BOSTON, June 8, 1889.

[At the end of 'Lippincott's Biographical Dictionary' is a "Vocabulary of Christian Names" which measurably supplies what our correspondent calls for. For fuller information about personal names he should consult Dr. G. Michaelis's 'Vergleichendes Wörterbuch der gebräuchlichsten Taufnamen' (Berlin, 1856, 72 pp., 8vo); and for Latin names of places use Dr. J. G. T. Graesse's 'Orbis Latinus, oder Verzeichniss der lateinischen Benennungen der bekanntesten Städte, etc., nebst ein deutsch-lat. Register' (Dresden, 1861, 287 pp., 8vo). A. Franklin's 'Dictionnaire des noms, surnoms, et pseudonymes latins de l'histoire littéraire du Moyen Âge' (Paris, 1875, 683 pp., 8vo), covers perhaps too limited a field for our correspondent.—ED. NATION.]

"ELECTRA" AT SMITH COLLEGE.

TO THE EDITOR OF THE NATION:

SIR: The Senior Class of Smith College gave the second of its two representations of the "Electra" of Sophocles on Saturday evening, June 15. The audience on the preceding Tuesday had been mainly of the college undergraduates and teachers and students of Greek; on Saturday only the minority felt a distinct interest in the language itself. The double test was a severe one. For Tuesday, the actors thought nervously of their "lines," and wondered apprehensively what theories of pronunciation or of quantity might be applied to their performance. On Saturday, they almost regretted that the judgment of their earlier and dreaded critics had been so uniformly kindly and even enthusiastic, as each expression had added to an expectation on the part of the new hearers that must be made good, if possible. In the first effort they naturally relied upon sympathy with their earnest desire of reproducing something of the Greek spirit, of embodying its wonderful conception of the drama to compensate for mechanical deficiencies; but in the second they felt from the first that there would be a strenuous demand for interpretation through dramatic action, and that the Greek tragedy which it had been the work of a year to appreciate might translate itself to the audience as lack of action. What were *Electra's* pious indignation if the audience yawned? But the audience did *not* yawn, and the general impression is that the second performance was both smoother and more spirited than the first.

The scenery was painted by members of the committee, and helped materially in producing an impression of grave simplicity. Doctor Blodgett's musical setting of the choral odes enabled the chorus to perform its double function of emphasizing the action of the principal characters and of supplying a distinct æsthetic element. Some knowledge of the difficulties experienced in other attempts to render Greek plays suggested great caution in the introduction of tableaus and chorus movements. Without the help of an instant comprehension of the language of the speakers, the action in a Greek play, even more than in a German or an Italian opera, hovers on the brink of the ridiculous. One giggle hopelessly dispels the tragic atmosphere as far as the laugher is concerned. The success of the chorus in Northampton was marked; few persons could have left the Opera-house either night without a clearer understanding of its functions.

There are two kinds of criticism which the performance must meet, one involving its character as a dramatic effort, the other testing its value as a factor in education. In meeting the first, it must be remembered that youth, inexperience, and a predominatingly intellectual training are not the customary equipment for great histrionic successes. Nor is it usual to find twenty-eight dramatic geniuses among fifty schoolgirls. And such, literally, is the demand made by the peculiar structure of a Greek play, which requires that silence shall speak, and spirit make itself felt through form rather than through motion. The severe criticism of Mr. Frank Sargent would find the results of his own training hardly more than creditable. But what is such an effort when looked at as a piece of discipline? Some of the actors would say that they did not know what work or scholarship meant before they took part in a Greek play. With humorous exaggeration, they will tell you that a clear conscience is inseparable from "elasticity of the joints," and that the one thing more difficult for an American girl than to walk slowly is to stand still. The practical conduct of a Greek play has involved a thousand problems and suggested thousands more. The necessity of individual responsibility, the importance of discipline in the ranks, the moral significance of what the English-speaking people on this side of the Atlantic call "making connections," have all received new emphasis. Besides, most of the actors are supplied with Greek quotations for the rest of their lives.

But, quite apart from these practical considerations, there is something to be gained from a year's study of a masterpiece simply because it is a masterpiece. There is no more fatal blunder than the assumption that effort is best expended where success is within reach. The "Electra" of Sophocles is possibly beyond the powers of any undergraduates, but those powers are likely to be indefinitely greater than if a society play had been given to the perfect satisfaction of the audience. The disciplinary value of afternoon teas and evening promenades needs no emphasis from colleges. The scornful question, "Is it worth while to attempt impossible things for the reward contained in the comment, 'As well as could be expected'?" punctuated with a shrug, misrepresents all the ambitions of such work as is under consideration. Shrugs are completely out of place and very infrequent, but if they were universal, the work would still be worth doing. But in particular cases the great problem is to know what it is wise to attempt. Here the class has been fortunate in having at hand the taste and judgment of Prof. Tyler, who has insisted upon simplicity, dignity, and moral impressiveness. In problems of scholarship connected with the undertaking, he has counselled moderation. Consequently the work has been relieved of the burden of discussion about pitch and accent and rival methods of Greek pronunciation. The aim has been to speak the lines intelligently and sympathetically, and in accordance with the received standards of Greek scholarship in the United States. O. R.

NORTHAMPTON, MASS., June 16, 1889.

THERSITES REDIVIVUS.

TO THE EDITOR OF THE NATION:

SIR: "Is a Soldier's Life worth Living?" On this thesis Lord Wolseley has recently been delivering himself, and in a tone the monopoly of which by certain British fire-eaters, alone among those whose native speech is English, will excite no envy. For this tone we were fully prepared by more than one of His Bellicosity's previous utterances; and the conclusion, affirmative, but strictly for domestic adoption, which, at vast expense of wordy bluster, he has elaborated is, also, precisely such as might have been reckoned on. His creed is one of engaging simplicity: militarism, and that only, is the antiseptic which can save the United Kingdom from putrefying. By way of exercise, let fancy figure a man to whom sensibility is mawkishness; who ignores, save with sinister aspect, everything but his own countrymen and their interests; and whose professional egotism contemplates with acrid contempt nearly all occupations except his own. That a man of this stamp, if essentially an amateur in real warfare, and unlessoned in the mystery of reasoning, should, on betaking himself to inkshed, comfort himself mostly as a clamorous swashbuckler, is hardly other than a matter of obvious consequence. In the category of morbid developments, a phenomenon of this complexion, particularly as a contemporary fact, is somewhat noteworthy. Let us inspect it, then, a little narrowly.

The day, we take it, has well nigh gone by when any one who forms his opinions more independently than by proxy, pays much regard to what Mr. Ruskin may think good to enunciate, especially in his excursions beyond the province of art. Laying it down, that "it is only by seriously risking his life in daring deeds, that the soldier can expect to appreciate fully how much a soldier's life is worth living," Lord Wolseley, however, repeats, with approval, his dictum, in much the same strain: "All healthy men like fighting, and like the sense of danger. All brave women like to hear of their fighting, and of their facing danger." Difference from him, as in taste, so in anything else, we are aware that Mr. Ruskin accounts a proof of imbecility, if not incompatible with sanity; and argument with an all-round autocrat would rank, for preposterousness, with his own dogmatism. Yet, in passing, we may indicate, as being eminently characteristic, his avowed

predilection for men who like fighting, and for women who like to hear of their fighting; objects which savages, barbarians, and those who copy after them are usually supposed to be peculiar in admiring. Characteristic, likewise, is his implied position, that the welfare of our species is promoted by encouraging his favorites in the indulgence of their appetite for violence. Nor less characteristic, once more, is his notion, that to like the sense of danger distinguishes all healthy men, while to like to hear of their facing danger distinguishes all brave women. Estimated by this advanced ethical teaching, with its exaltation of mauleys and viragoes, miserable samples of their kind are the poor-spirited creatures, male and female alike, who are content to hear, when danger has to be encountered, that it is encountered without flinching and in a spirit of self-sacrifice. Meantime, the healthy men whom we have seen represented as normal, though they are spoken of, by poetic license, as existent, as yet, to the general comfort, disport themselves in the future; so that these denizens of the Ruskinian Utopia need not discompose us. For the rest, as to the brave women whose partiality has been revealed to the philosopher who applauds them, that they should desire their mates to be imperilled, in the hope, not altogether unjustifiable, of getting rid of them, couid hardly be wondered at.

But we have noticed the quotation from Mr. Ruskin chiefly because of what the prancing stepson of Mars, to whom its doctrine seems so axiomatic, immediately appends to it. For, according to him, "No doubt there are thousands of our soldiers who do like war simply for the many healthy pleasures it brings with it." If the facts of the case were far to seek, this intrepid demand on credulity would be intelligible.

Few can stand in need of information relative to the ordinary English soldier. In him we have the dregs of the most degraded class of the populace; and it suffices him that, in the career he chooses, he expects a life of comparative idleness, a sufficiency of food and above all of drink, and a certainty of wages. Matchless as he may be in the article of inbred ferocity, his courage, like his muscle, is inferior to that of any of his social betters. How little he is improved, otherwise than as an implement of destruction, by military discipline, is notorious; the hospitals and courts of justice instructing us as to his demeanor and diversions when not directly under the eye of his superiors. That, as we are told, there are many healthy pleasures annexed to his calling, and that, simply for these, thousands of his fellows like war, is palpably fictitious. As a rule, he detests those things in his life which conduce to his health, while the pleasures which he prizes are, all but wholly, of the most debased and debasing description. And among these pleasures is that which, let Wolseleyites view it as they will, marks the nearest human resemblance to the brute creation. How ardently the titled essayist sympathizes with a zest for phlebotomy is patent from the unvarying tenor of his truculent rhapsody. Of the *œstrus* of a soldier in the breach he says: "It is truly an education to feel that even this vile body of ours can be thus illumined, for the instant, as with a spark of fire that must surely be of heavenly birth." The quality of the religionism here disclosed admits of only one interpretation. The gospel of Moloch, if we had it, would, doubtless, turn out to be conceived in some such vein as this masquerading heathenism. Taken at its very best, are we not authorized in paralleling the inspiration of a soldier in action with that which stimulates the matador in a bull-fight? Be this how it may, neither Moses, nor Solomon, nor Jesus, nor, so far as we have learned, any prophet before our own day, has inculcated its celestial origin.

Elsewhere we read: "All other pleasures pale before the intense, the maddening delight of leading men into the midst of an enemy, or to the assault of some well-defended place. That rapturous enjoyment takes man out of himself, to the forgetfulness of all earthly considerations. He is, for the time, beside himself, and, as it were, a creature of another world, acting under influences unknown before." Here the officer, not the private, is the subject. But he, too, we are assured, when engaged in his slaughterous work, is rapt with delirious ecstasy, and naturally so, if, as is intimated, he is a passive tool in the hands of a Higher Power, and is oblivious of everything except the future bliss which he believes will reward his supernal frenzy. "Yea, Carnage is His daughter," sang the Tory Wordsworth, premising the name of God; and now our course is made plain to us, if we would be adopted as His sons.

The thoroughness of his touch with the rude spirit of an unregretted past Lord Wolseley leaves no room to gainsay. "In order that man should learn to despise 'the manly art of self-defence,' a new idol has been created for this modern philosophy, the idol of human life. Every practice that can in any way tend to endanger life or limb must be condemned." After thus simultaneously outraging verity and disparaging what every rational being holds dear, he goes on to sneer at the "maudlin philosophy" which legislates with a view to put down prize-fighting, a philosophy which, to his thinking, "strikes at the foundations upon which great nations are built, and from which spring the manly strength and courage of their sons." With him, during the reign of Lord Tennyson's "canker of peace," "manly strength and courage" are sheer phantoms, apart from their realization in what all but the outcasts of society and their shameless abettors view with abhorrence. Fighting, we should judge, he holds to be the supreme good of existence. Who knows, indeed, that he will not next recommend, as the model for our pusillanimous age, his compatriot of Donnybrook Fair, Phelim of the trailing coat, with his general invitation just to tread on the tail of it? At any rate, the fact that, on a point of decorum and morality, a nobleman of the Victorian era should obtrusively elect to associate himself with Whitechapel bruisers and the emptyings of prisons, may be, for Great Britain, a sign of the times, though we prefer to believe that his choice of companionship only betokens an abnormal idiosyncrasy.

Summarily, we have seen it asserted that, not till he seriously risks his existence, and experiences the transport of doing so, does a soldier come to understand to the full that his life is worth living. At the same time, as has also been asserted, thousands of his comrades (by implication weaker brethren) are enamoured of their calling "simply for the many healthy pleasures it brings with it,"—that is to say, on a ground purely imaginary. But, for all together, there is another reason, it is alleged, for their being content with their lot.

> "To the boy the admiration of his schoolfellows is far more subtle flattery than the applause of those he does not know. And so it is with soldiers. Although the first thought of the British soldier, after an action, is, 'What will they say in England?' still the esteem and praise of comrades are more valued by him than the acclamations of fickle mobs and the accurately measured praise of ministers. Surely, therefore, life presents itself, to the soldier in action, under an aspect specially calculated to make it worth living."

Thus, the identity between "an action" bygone and one present being a riddle abandoned as insoluble, though at first the red-coat who has not shown the white feather is satisfied with anticipating the favorable verdict of Mrs. Grundy, he is, on second thoughts, still more satisfied with the approbation of his fellows. And similar approbation is highly welcome, no doubt, to the cracksman or the thimblerigger. That a soldier who has acquitted himself as was fitting ought to feel cheered by the consciousness that he has done his duty, is observably left unnoticed, and so is the desirableness of cultivating such a consciousness. Is Lord Wolseley of opinion that the fighting efficiency of a soldier would be impaired by his postponing a value for fleeting popularity to anything more elevated?

Further reasons than those which have been specified for the answer which Lord Wolseley returns to his interrogatory are undiscoverable in his rambling and incoherent declamation. Of argument he is, in fact, as sparing as if the business before him were to wield his sword. The emphasis of iteration, as in dealing with an enemy of flesh and blood, is his chief dependence, over and above bravado, for enforcing surrender:

> "Yes, the soldier's life is worth living. But, to believe in this, you must expel from its supreme place, among the recognized objects of existence, that greed of gain which seems now to have fastened, like a cancerous sore, upon most of the professions and callings of men outside the Army, the Navy, and the Church. This mad and restless longing for wealth at any price, and for the luxury wealth can purchase, is eating away the manly heart of the English nation. It has become a religion, with its apostles and its writers, aye, even with its poets."

The monstrous falseness and the frontless insolence of this must be evident to any one not entirely ignorant of English society at the present day. Curiously exceptional is the Englishman who ever thinks of entering either the Army, the Navy, or the established Church, as a serious profession, if he has ability for any other occupation, or industry, or interest, or capital. One may well smile, too, at the idea that, among those who follow the vocations which are found selected as being alone reputable, there is a whit less self-seeking than among lawyers, physicians, scientists, artists, teachers, men of letters, dissenting ministers, Romish ecclesiastics, and most other educated classes of the community. No one, proverbially, more than the questionable pretender to martial skill and prowess is liable to the imputation of swaggering boastfulness and gratuitous effrontery. Not without reason is this reminder here provoked. Except for the sinews of war provided by the objects of his disdain, where would have been Lord Wolseley's opportunities for magnifying himself, and the fruits of his utilizing those opportunities? Yet, from his language touching civilians, it is clear that, far from being grateful to them, he regards even veracity of description and the commonest courtesy as in excess of their deserts. Moreover, can it be denied that, with the British officer in war-time, the wish that is uppermost is for casualties which will lead to quick promotion and the emolument thereto attached? *Quod scimus loquimur et quod vidimus testamur.*

To what extent Lord Wolseley has still to acquire customary urbanity in his commerce with the world has been evidenced, since he spent his contempt as above, in the course of a lecture delivered by him at Oxford.

Nor, on that occasion, was he untrue to his habit of resorting to calumnious invention. To confine ourselves, however, for exemplification of his fertility in romancing, to his discourse under review, after signifying his scorn of "these metallic, supercivilized days," he is there pleased to fable a bran-new tribe of fribbling cynics, in the shape of depreciators of Nelson. About five and twenty years ago, an eccentric English journalist, claiming to have found out that the memory of the hero of the Nile and of Trafalgar was held in marked veneration by Americans, laboured to show that, therefore, his countrymen must be grievously mistaken in their estimation of him. Building on this circumstance, Lord Wolseley would have it credited that "some now even profess to sneer at the homeliness of the unaffected manhood which enabled him to scatter hostile fleets, and make England a word of victory, and renown, and fear, on every sea her war-ships swept." A fabrication of this sort is suggestive, as is, withal, his designating, with the animus of a purblind Tory, the services, in the War of Secession, of a valued contingent of our soldiers of the North, as only "a daily pastime." And nearly akin to his disregard of facts are the transparent unreality and insincerity which suffuse his heroics generally. A few specimens of these, feigned to express the feelings of the British man at arms, or else addressed to him, are here subjoined:

"Looking at existence purely from a soldier's point of view, it is incomprehensible how men can care to live, when honour, the salt of life, is no longer one of its recognized ingredients."

"A determination to do our duty by the nation, come what may, and under all circumstances, is a noble resolve, that lifts man out of the slough of selfishness, where so many millions live, and are content to die."

"But, at his most unhappy moment of hunger, thirst, and wretchedness, when nearly exhausted by fatigue and want of sleep, he brightens up as he remembers that it is for England he suffers."

"All that is best and noblest in man is cradled in the love of home and country. From it springs that martial glory without which no nation can be great or last long. But, for this true glory, which, like the forest-tree, takes root and spreads, the nation must pay in blood, the blood of her bravest sons."

"Your country's glory is no mere sentimental, intangible possession. It is a considerable part of its greatness and strength; and he who can add to the fighting reputation of England does her a service worth living to attempt, worth dying to accomplish."

But we must have done with the fustian and rant of the reigning Brummagem Wellington. Sooth to say, he rather reminds one of a termagant in cocked hat and jack-boots, who goes up and down the earth in hysterics, disturbing quiet folk by obstreperous protests of her bravery, and honour, and readiness to give up the ghost for it, and all that. Though soldiership, as we ourselves had experience not very long ago, is sometimes a cruel and imperious necessity, no person instinct with genuine humanity could eulogize it, for itself, and as an end, as he has done. However a ruder age might have sympathized with his heartless and hectoring mood, and lust for self-aggrandizement, the charities of enlightenment, where it is more than a name, revolt from them with detestation. If England is particularly proud of him, there is just ground why civilization should not be particularly proud of England. Of rare occurrence is the self-exhibition of a man who acknowledges, as he virtually does, that the world would be, to him, an insipid waste, if there were no longer any one to kill.

F. H.

Notes.

T. Y. Crowell & Co.'s current announcements are 'Paying the Penalty' and 'Three Times Tried'—six short stories in each volume, by G. Manville Fenn, B. L. Farjeon, Grant Allen, etc.; and 'Impressions of Russia,' by Dr. Georg Brandes.

Mr. George H. Jessop, who recently contributed to the *Century* a series of Irish-American stories, has written a novel, 'Judge Lynch, a Tale of the California Vineyards,' which will be published shortly in London by Longmans & Co., and in New York by Belford, Clarke & Co. Miss May Kendall, a young English poetess of more individuality and humor than most magazine versifiers, has also written her first novel, 'Such is Life,' which is to be issued this month both in London and New York by the Longmans.

Frederick Warne & Co. publish directly 'Fifty Years on the Trail: a True Story of Western Life,' by John Y. Nelson and Harrington O'Reilly.

'A School Iliad, with Vocabulary,' edited by Prof. T. D. Seymour of Yale, is in the press of Ginn & Co., Boston. The vocabulary will be illustrated with cuts. The same firm announce a 'Practical Latin Composition,' by that able instructor, W. C. Collar, Master of the Roxbury (Mass.) Latin School.

It is said that Miss Elizabeth Balch, an American, is the ingenious author of 'An Author's Love,' which we lately reviewed.

The Committee on Old South Prizes, at the Old South Meeting-house, Boston, offer two prizes for essays by graduates of the Boston High and Latin Schools of 1888 and 1889. The themes proposed are as follows, and we take the liberty of thinking them much too ambitious for boys and girls of seventeen to eighteen: "(1.) French Influence on American Political Thought during the Period of the American and French Revolutions. (2.) Washington's Interest in Education. Discuss especially his project of a National University."

If ever a book deserved to be called a library in itself, it is the British 'Reference Catalogue of Current Literature for 1889' (London: J. Whitaker & Sons; New York: R. R. Bowker). It is the analogue of our American 'Publishers' Trade List Annual,' and consists of the various booksellers' catalogues bound in one pair of covers. It is a duodecimo measuring ten inches across the back, the octavo form being the preferred American. The surprising feature of it, after the size, is the Index of 404 pages, which omits no book, and sometimes enters a book three times, under title, subject, and author's name. As this is not merely a directory to new publications, but covers the entire list of the British book-trade, its importance can readily be imagined. Moreover, it embraces a large number of American works published abroad with or without convention. There are twenty-seven different publications pertaining to Longfellow, for example; and it is an odd circumstance that Lowell's list is introduced thus, "Lowell, Hydraulics," and Emerson's, "Emerson (Jas.), Waterwheels." Poe is more popular than either of these last, or than Hawthorne. Four firms contest the market for Cooper's works, three for Mark Twain's. The classification of the Index is very helpful. Shakspere fills nearly a page, and stands, shall we say? for one 400th part of so much of current Anglo-Saxon literature as is contained in this Catalogue.

Two American firms have laid hands on Bourrienne's 'Memoirs of Napoleon Bonaparte,' reprinting the 1885 reimpression of the 1836 English edition; and the impecunious book-buyer awaiting his chance has now an excellent opportunity to purchase this work at a low figure. Both that published by the Messrs. Scribner and that by T. Y. Crowell & Co. are neatly bound, in styles appealing to different tastes. Both are in four volumes—the Scribner being smaller and employing a smaller type for the extracts; the more legible of the two editions as respects the body type, since the paper is unglazed and the impression darker. It requires somewhat more shelf-room, though not much. The portraits are poor in both, the Scribners resorting to process reproductions of steel engravings, while Crowell & Co. have been at the expense of woodcuts which hardly justify the effort to excel in this respect. The one incontestable feature of superiority on the part of the Crowell edition is the index, which fills thirty-four pages. With many purchasers this will be decisive, and it certainly deserves such a recognition as will lead all publishers of similar works to supply the defect of English editors and publishers.

A society called The Haliburton was established five years ago at King's College, Windsor, N. S., with a view to furthering "in some degree the development of a distinctive literature in Canada." It now begins a series of annual publications with an essay on Thomas Chandler Haliburton, by F. Blake Crofton (prepared, by the way, for the Nova Scotia Historical Society). A portrait on wood of the creator of "Sam Slick," from a photograph taken at the age of sixty, is prefixed to the pamphlet. Mr. Crofton begins by correcting numerous errors concerning Judge Haliburton in Allibone, the 'Encyclopædia Britannica' and other sources; and then corrects this author himself in his remarks upon the expulsion of the Acadians, which had their influence upon Longfellow. A character in Haliburton's latest work, 'The Season Ticket,' which was published anonymously, is Senator Boodle, who seems to need no introduction to our generation; but this worthy gentleman was simply a prophet of Colonial confederation, an intercolonial and Pacific railway. Mr. Crofton finds the proverbial expression, "all same old drunk," in Haliburton's 'The Old Judge,' and provisionally makes him the originator of it, as well as of "How much are you sorry? [reckoned in cash for relief]," Topsy's "I growed up," etc. There is an index to this entertaining pamphlet.

Two other historical brochures are on our table: a 'Narrative of the Captivity of Stephen Williams,' who was taken by the French and Indians at Deerfield, February 29, 1703-4, written by himself; and an Address delivered before the Confederate Survivors' Association in Augusta, on April 26, by Col. Charles C. Jones, jr., on "Georgians during the War between the States." The first publication we owe to the Pocumtuck Valley Memorial Association. It has been edited by George Sheldon, and printed at Deerfield, Mass. The narrator was a son of Rev. John Williams, "the redeemed captive," and lived to graduate at Harvard and to have a long and useful career as a minister and chaplain. The reprint is verbatim. An appendix copies some other papers of the diarist, which deal with Indian raids. Dr. Jones's address takes a pessimistic view of the present condition of Georgia as compared with that of ante-bellum days, alleging that, without estimating slave property, the State "is now poorer by more than twelve millions of dollars than she was twenty-nine years ago." He praises the fidelity and peaceableness of the slave population during the war.

Apropos of the Williams narrative just mentioned, we notice that the Deerfield Summer School of History and Romance will begin its fourth season on July 6. Clarence C. Buel, Prof. J. K. Hosmer, Edward Bellamy, Dr. T. M. Coan, Charles Dudley Warner, and Edwin D. Mead are some of those who will read papers. Communications should be addressed to the President, Mr. L. J. B. Lincoln.

The *Scottish Geographical Magazine* for June opens with an account, by H. B. Guppy, of the Cocos-Keeling Islands, a group lying about six hundred miles south of Sumatra. They are especially interesting as having been visited by Mr. Darwin in 1836, who founded his theory of subsidence upon his observations of a large atoll contained in them. Mr. Guppy spent ten weeks among the islands, examining them with particular reference to determining whether this or the rival theory of Mr. John Murray of the *Challenger* Expedition is correct. The author's conclusions, well known to be adverse to Darwin's, are deferred to a subsequent paper. The advantages of the islands as a sanitarium, from their comparatively cool and equable climate and small rainfall, are dwelt upon, and interesting facts in regard to the growth of the land are given. Great masses of pumice, for instance, thrown into the sea by the eruption of Krakatoa in 1883, have floated to their shores, which "have in many places advanced from twenty to thirty yards; and young trees, such as *Cordia subcordata*, together with young cocoanut palms, now grow where the waters stood then." The islands, it may be added, are the property of a Mr. G. C. Ross, the grandson of a Scotch seaman who took possession of them some sixty years ago. They are now attached to the Government of Ceylon. A paper on the rainfall in South America south of the tropics, by Mr. W. B. Tripp, is illustrated by an admirable map. The various data are derived from the Meteorological Annals of the Cordoba Observatory. The most noteworthy fact is the great increase of the rainfall in the Argentine Republic from a maximum of 32 inches in 1861 to 48 inches in 1883. There are indications, however, that a time of correspondingly gradual decrease has already set in. Mr. H. R. Mill shows in a popular way the relations of a scientific knowledge of the earth to commerce.

The Messrs. Longmans' *New Review* is out for June, and has an open, attractive appearance, which is not diminished by the relative slenderness of its ninety-six pages of text. Two ladies are on the list of contributors—Mrs. Lynn Linton, with her "Religion of Self-Respect," and Lady Randolph Churchill, who tells of her month in Russia. Boulanger's case, by Senator Alfred Naquet, and impeachment, by Deputy Camille Pelletan, lead off on opposite sides. Mr. Henry James's paper, "After the Play," connects itself with that unique French creation, the "Théâtre Libre," which opens the way to aspiring dramatists, safe alike from the censor and from the criticism of the public at large.

Students of modern Greek may like to hear of a new philological review in that language, Ἀθήνα, which B. Westermann & Co. supply in this country.

The thirty-seventh annual report of the Trustees of the Boston Public Library is noticeable chiefly for the experiment in regard to binding, by which the present arrangement has been reached of giving only the costly binding to the Library's own force, and having the cheaper done outside. A quarto supplement to the report gives plans and elevations of the new building now in process of erection.

Mr. W. E. Foster, in his eleventh annual report on the Providence Public Library, points to the lowest percentage in the use of fiction ever known in his experience—hardly more than half the total use (57 per cent.). One-fifth of the books called for, he says, are now scientific, one-fifth historical, and three-fifths literary.

The Warren County Library Bulletin, published at Monmouth, Ill., states that "magazines were the beginning of this library. They constituted for two years our entire 'circulating medium.'" The demands thus engendered for books were made the guide in stocking the library, and "in its general department, therefore, this library has aimed to be as learned and as popular, as liberal and as orthodox, as grave and as gay, as the best popular magazines." Further on we read: "A list of the very best new books on farming, gardening, fruit, flowers, poultry, etc., is given at the end of this Bulletin. A table supplied with periodicals, seed catalogues, and gardeners' annuals is in the reading-room."

In the *Bollettino* of the National Central Library at Florence for May 15 we read of the new card-catalogue of its collection of autographs in preparation. The entries are by writer, recipient, or subject (personal). The letters, each of which has its own printed and docketed wrapper, have thus far been catalogued to the number of 10,000, on 32,000 cards.

—The fourth volume of the new edition of 'Chambers's Encyclopædia' cannot be far from overtaking us before we have paid our respects to the third (Catarrh to Dion. Philadelphia: J. B. Lippincott Co.). China and Cotton are the fullest articles in the present instalment, and perhaps the article attempting a systematic exposition of the Darwinian Theory ranks next in point of length. This is by Prof. Patrick Geddes, while the life of Darwin is sketched by Mr. Grant Allen. A Frenchman, E. de Pressensé, has been intrusted with the definition of Christianity, and has produced rather an apologia than a simple, historical statement of the nature and development of this religion. The article reads like a sermon, and is in marked contrast with Mr. Thisleton Dyer's brief account of Christmas, which follows it a page or two later. The writer who has to deal with the Devil makes him out to be nearly dead; at least—"In later generations the sense of the supernatural has steadily decayed, and with it almost all the terrors of the devil." In the employment of specialists, the editors have in no instance surpassed their selection of one to write on Cremation, for they append a note saying that "while this volume was passing through the press, the author of the above article died, and his body was cremated at Woking." Prof. James Geikie discourses of Coral Islands, and fairly sets forth the latest stage of the controversy over Darwin's theory of their origin. Mr. H. B. Wheatley gives a good summary description of Chapbooks, which he says are still produced in England. The Duke of Argyll writes rather perfunctorily of the Clan. Sir F. de Winton tells with knowledge the main facts about the Congo Free State. None of the biographical notices are masterly. Prof. Hales's Chaucer stands near the front, but has too much conjecture in it. Prof. W. Knight writes sensibly of Coleridge. Goldwin Smith's Cromwell touches the burning Irish question in a way not likely to placate his Irish admirers. Daudet is sketched by G. Saintsbury, without excess of praise, and Dickens by Walter Besant, who ignores the novelist's touring on the Continent and in America, barely mentioning the 'American Notes' in a list of his works. The American portion of the 'Encyclopædia' shows no signs of neglect, but the contrary. Colorado, Connecticut, and Dakota are illustrated by three maps, and the division of this Territory into two States is recorded. A chapter on our civil service ends with a just picture of improvement within the scope of the beneficent Civil-Service Law, which has "lessened the number of incompetent politicians who thrive upon the 'spoils system' applying for office."

—'Art and Artists of our Time' (Selmar Hess), of which the first sixteen instalments are before us, is made up in the manner of most such publications. The pictures engraved are evidently selected for their popularity rather than for their merit, and, the publisher having thus insured his sales, the critic is allowed to say what he pleases in the text. The worst painters are dismissed with amiable commonplace or damned with faint praise, and all severe criticism is reserved for men of the first rank whom the writer considers worthy of his steel. There is a full-page line engraving after Coomans which was too "pretty" to leave out, and accordingly Mr. Clarence Cook, the editor, manages to fill thirteen lines about the artist. On the other hand, when Mr. Cook devotes between eight and nine pages to serious writing about Millet, the publisher allows him a few small and indifferent process plates scattered through the text. Baudry, whom Mr. Cook hardly sufficiently admires, but whom he treats with respect, is given only two insignificant cuts, and De Nittis, whom he admires greatly, but one; while the painters of "sentiment" and namby-pamby are given all the glory of plate paper and wide margins. The criticisms are written almost entirely from the literary point of view, with hardly a word as to technical methods or merits, judgment being rendered in every case upon the subjects chosen or the manner of presentation. It is perhaps wise for the lay critic to take this ground, but it seems strange in a book professedly dealing with painting to find no word that could indicate to the uninitiate the difference of technique between Corot and Ingres. Many of the plates are second-hand, and those made specially for the present publication are not more than mediocre.

—An account of a journey over the Transcaspian Railway by the Hon. G. Curzon, M.P., in the May Proceedings of the Royal Geographical Society, is of more than common interest. After a brief sketch of the history of the undertaking, Mr. Curzon gives a few details as to the construction. The roadway, a low earthwork or embankment, was made by native workmen, of whom the Turkomans proved the best laborers and the Persians the worst, "being incurably idle, though strong as oxen." The plate-layers were picked soldiers of the Russian railway battalions, who laid sometimes "nearly four miles in the day," the normal rate being over two. It should be said, however, that the rails are "simply spiked down without chairs or bolts." The cost of the whole line from the Caspian to Samarkand, a distance of 900 miles, was a little over $20,000,000, one of the cheapest railways that have ever been constructed. This is owing partly to the uniform flatness of the region traversed, the steepest gradient encountered being only 1 in 150, and there being only three bridges to build; and partly to the cheapness of labor, the wages of the native workmen being at first eight cents, though ultimately sixteen cents, a day, while the skilled workmen were mostly soldiers. On the other hand, "every piece of timber, iron, and steel employed," including even the more than two million wooden sleep-

ers used, "was brought from the forests or workshops of Russia, for the most part down the Volga and across the Caspian." For the first 110 miles all the fresh water used has to be transported over the line in tanks; artesian wells and condensing machines having proved unsuccessful. To guard against drifting sands, palisades have been built and tamarisk, wild oats, *saxaoul*, and other desert plants have been brought from nurseries in the Persian mountains and planted along the line. All the fuel used, both for heating and light, is the refuse from distilled petroleum, found in the country itself and brought from Baku. "The tenders for this year specified the total amount required as 6,000,000 gallons." The rolling stock consists of from 100 to 150 locomotives and from 1,500 to 2,000 wagons. Trains run daily from the Caspian to the Oxus, and twice a week from that point to Samarkand, the cost of a second-class through ticket—there are no first-class carriages—being $18, and the time being seventy-two hours. The whole staff of employees, with a very few exceptions, are soldiers of the line.

—As regards the development of that part of Turkistan through which the line passes, Mr. Curzon does not speak very favorably, because of the scarcity of water. But his account of the great Merv oasis is very encouraging. "The whole district had been made over to the private purse of the Czar, and the result was that scientific engineers had been sent out; the great dam across the upper waters of the Murghab was being repaired; millions of young trees were being planted; cotton cultivation was being encouraged." Considered simply as a commercial enterprise, the railway, having been constructed so as to correspond with the principal caravan and trading routes, is a success. It is said already "to be defraying its working expenses, and whispers of a surplus have actually been heard." An important result, also, of the road, together with the heavy duties upon all foreign goods, is the almost total extinction of English trade in northern Central Asia. In its political effects, the construction of the railway means, according to Mr. Curzon, "the absolute and final Russification of the middle zone of Central Asia from Khorasan to Khiva, and from the Caspian to Samarkand." The military and strategical consequences of the line are too obvious to need mention.

—The *Archiv für Eisenbahnwesen* of Berlin publishes every year a summary of the world's railroad mileage, which is, on the whole, the most authoritative statement of its kind. The current number gives statistics for the close of the year 1887. At that period there were in round numbers 342,000 miles of railroad open for traffic. Of these America had 181,000, or more than half, Europe 130,000, Asia 17,000, Africa 5,000, and Australasia something over 9,000. Of the railroads in America, just about five-sixths were in the United States, which had 150,000 miles. British America had 12,000, and Brazil, Mexico, and the Argentine Republic from 4,000 to 5,000 each. Of the Asiatic railroads, over 14,000 miles were in British India; the Transcaspian railroad and those in the Dutch possessions being the most important among the others. China had practically no railroads in operation, but Japan had nearly 500 miles. In Africa the leading railroad system is that of the Cape Colony, with nearly 2,000 miles in operation. Egypt, Algiers, and Tunis also have considerable systems, but the central part of Africa is almost entirely undeveloped. The oldest Australasian systems are those of New South Wales, Victoria, and New Zealand, each of which now has about 2,000 miles of railroad. The other Australian colonies are beginning to develop rapidly. In Europe the country with the greatest absolute mileage is Germany, with nearly 25,000 miles, followed by France with 21,000, Great Britain with not quite 20,000, Russia with a little less than 18,000, and the Austrian Empire with 15,000. The country with the largest mileage in proportion to area is Belgium, which has in round numbers one mile of railroad for every four square miles of territory. England alone would probably have about the same proportion, but Great Britain and Ireland have only about one mile of railroad to every six square miles of territory. If the comparison is made with population, France has a slightly larger per-capita mileage than either England, Belgium, or Germany; but that of the United States is more than four times as high as France, while the showing in Australia is even a trifle better than ours.

—A striking thing about these statistics is the amount of increase in recent years. One-third of the railroad mileage in the table was constructed since the close of 1880, the increase in these seven years being not very much less than in the twenty years immediately preceding. Just about half of this increase has been contributed by the United States. The most rapid percentage of increase is of course found in the newest countries, like Australia. If we confine our comparisons to the last four years, we find that while Europe has increased only 13 per cent. and the United States 26 per cent., Australia shows a growth of about 48 per cent. The capital invested in railroads has probably not increased quite so fast as the mileage. A careful, although necessarily somewhat uncertain estimate, makes the average cost of railroads in Europe about $113,000 per mile, and that in other parts of the world about $59,000; indicating that the total investment, as nearly as can be ascertained, is $27,000,000,000, rather more than half of it in Europe.

RECENT AMERICAN POETRY.

It might be well if those poets who have not yet established their names and birthdays in the biographical dictionaries should at least put the age as well as the name on their title-pages. Imitativeness is very much a question of age alone. Lowell began, in 'A Year's Life,' by imitating Tennyson's earlier poems, and it did him no harm; indeed, he showed more discretion than Tennyson when it came to weeding them out. Imitation at twenty is often a good sign, if well directed; it proves nothing against a first volume of poems; it is when it continues into the third and fourth volumes that it becomes discouraging. This is the case with Mr. Madison J. Cawein, for instance: the habit of cheap imitation of easy and dangerous models is as glaring in his third book of verse, 'Ascolon of Gaul, and Other Poems' (Louisville: J. P. Morton & Co.), as in its predecessors. First we have Swinburne:

> "Brows wan through blue-black tresses
> Wet with sharp rain and kisses;
> Locks loose the sea-wind scatters
> Like torn wings fierce for flight;
> Cold brows, whose sadness flatters,
> One kiss—and then good night." (P. 113.)

Then comes Poe, four pages later:

> "And we clomb through a murmur of pinions,
> Thin rattle of talons and plumes;
> And a sense as of Boreal dominions
> Clove down to the abysms and tombs;
> And the Night's naked, Ethiope minions
> Swarmed on us in legions of glooms."
> (P. 117.)

In the title-poem of sixty-four pages we have unmixed Tennyson. Were all these the compositions of a sophomore, by way of joke, it would be well enough, or if a student suspected of genius were to do them seriously, there would be no great harm; but Mr. Cawein is in his third volume.

Again, Mr. Charles Edward Barns prints 'The Amaranth and the Beryl' (Fracker) a his fourth work, but we have the inevitable Poe again:

> "Come with me, my angel-bride,
> Where the drowsing billows ride;
> Where the poppied isles of ease
> Sleep in paradisial seas." (P. 181.)

And in the long poem "Mirabel" we have Keats and "The Eve of St. Agnes," at every step.

> "Ah, friary vigil of All-hallow's eve!
> Now Memory masks with weirds her children pale,
> And fancies from the fertile bosom heave,
> Crouching them shy upon the eyelids frail.
> See! brided Twilight in her moon-warm veil
> Hath crept down from the altars of the sky
> With her druid knight in ebon coat of mail,
> While the young Hours their tributes kneelingly
> Hymn to the panting stars, mid wildest melody."
> (P. 45.)

To be at once imitative and crude is the blessed privilege of youth; but it is one soon forfeited.

As there are grades in imitation, so there are grades in passion. Few women, especially, attain to passion's white heat; but Anne Reeve Aldrich in 'The Rose of Flame, and Other Poems of Love' (Putnams), at least reaches the red heat, which is something that at once puts her beyond many of her sisters, who never attain to any real heat at all, but only to an obtrusive burning of unseemly and unfragrant stubble. There is more of the white heat of passion in the few verses of Helen Jackson's "Vintage" or in Saxe Holm's "Three Kisses of Farewell" than in all Miss Aldrich's quaintly bound volume; but there is more in this very volume than Mrs. Amélie Rives Chanler and Mrs. Ella Wheeler Wilcox will ever succeed in putting into their accumulated writings, prose and verse, should they survive until old age and write as many volumes as they wish to write. In Emma Lazarus's collected 'Poems' (Houghton, Mifflin & Co.) we have something distinct from personal passion, the passion of race and religion, kindled by the sense of wrong. Miss Lazarus was early controlled by two of the strongest personal literary influences of our time, namely, Emerson and Heine; and it is not strange that the latter, wild and witty as he was, should have finally been the ruling influence of this pure-souled woman—remote as she was from his failings and quite destitute, so far as her poems indicate, of his mocking humor. But they had the strongest of all race ties between them, and when it first dawned upon her that her race and religion were persecuted, her life was renewed and consecrated. In New York, in Newport, she was little of a Jew; her family did not attend the synagogue or observe the ordinances; but she learned in suffering for others what she taught in song. Her chosen collective title, "Songs of a Semite," was a fit one; it was a race that found voice in her. She showed real dramatic talent in "Il Spagnoletto," but she was so modest about the little play that it was for years only privately printed. It was only when her voice became a trumpet that she wrote without care for art, and then found all her previous artistic training an advantage. She never attained to her full strength, but will always have for students of literature that picturesqueness which is sometimes more attractive than power.

Mr. William Sharp, the English poet, in the preface to his newly published 'American Sonnets'—which we purpose, by the way, to notice separately—points out how much our cis-Atlantic poets owe to their great variety of surface. Any review of recent American poetry soon becomes a matter of local coloring. Thus,

in 'Poems and Translations,' by Mary Morgan ("Gowan Lea"), published in Montreal by Robinson, we have a Canadian note, but without especial vigor; the German translations are pleasing, though the author should stop short of Heine. 'Among the Millet' (Ottawa: Durie), by Archibald Lampman, is stronger and more varied, or at least more picturesque—especially one poem, "Between the Rapids," which suggests how much ought to be made, by Canadian writers, out of the French life and the *voyageur* element:

"Wild black-eyed Jeanne, whose tongue was never still,
Old wrinkled Picard, Pierre and pale Lisette,
The homely hearts that never cared to range
While life's wide fields were filled with rush and change." (P. 41.)

Mr. G. Dickinson's 'Wanderer' (Boston: Clark) should have, by its title, some flavor of travel at least, but is a peculiarly repulsive book, because, under cover of a cheap imitation of "Childe Harold," it devotes twenty-five pages of preface and many others of notes to a revival of the details of a scandal which should now be buried in oblivion. 'Christmas Carillons, and Other Poems,' by Annie Chambers-Ketchum (Appleton), offers a pleasing Southern flavor here and there, but is otherwise of little value. In 'Song of the Palm, and Other Poems,' by Tracy Robinson (Brentano), we have the tropical flavor still more accentuated, but without any corresponding increase of wealth or expression. 'Rebel Rhymes, and Other Poems,' by Elizabeth J. Hereford (Putnams), has more that is characteristic of Southern life than of external nature, but it has strength and tenderness, with no undue bitterness. The description of the old plantation where "happy slaves their burden bore" (p. 5), seems a little incongruous when we remember what exceedingly severe laws were somehow needed to keep these same happy creatures from running away from bliss. In 'Some Dainty Poems,' by Waldo Messaros (Philadelphia: Hartranft), we have local flavor again, but this time of modern Greece; and the poems describing the author's Greek parentage and childhood are spirited enough to win some charity for the affectation of the title. 'Idyls of the Golden Shore,' by Hu Maxwell (Putnams), takes us to California, and offers themes which have a certain value quite apart from the treatment. The poems were mainly written by the camp fire. Carrie Warner Morehouse, in 'The Legend of Psyche, and Other Verses' (St. Johnsbury, Vt.: Walter), should give us a Vermont flavor at least, but there is in the book more of Greece, or at least of Europe, than of the Green Mountains, although "In Late Summer" (p. 45) is simple and genuine.

'A Bachelor's Wife, and Other Poems,' by Channing Moore Huntington (Utica, N. Y.: Kelly), is illustrated by that well-known artist, the poet's father, and has at least that attraction. 'Mother Carey's Chickens,' by Wilbur Larremore (Cassell), has some seriousness of purpose and poetic expression, especially in the sonnets to Emerson and Bryant. Carlotta Perry's 'Poems' (Belford) show a fatal facility. Mr. Warren Holden of Girard College publishes a third thin volume of his poems, which have a certain promise from their modesty and simplicity—'Autobiography of Love' (Lippincott). 'White Sails,' by Emily Huntington Nason (Boston: Lothrop), is printed with an amplitude of type rather out of proportion to its merits, and it paralyzes one's faith in the author's outdoor poetry to find her, in "Wild Columbine" (p. 86), describing that spring flower as coming after the buttercups and field-lilies have faded. Mr. Harry Lyman Koopman, who essayed the dramatic once before in his 'Orestes,' tries it again in 'Woman's Will; a Love-Play in Five Acts' (Buffalo: Moulton, Wenbourne & Co.), but we still think his best talent is lyrical. Mr. W. R. Thayer, in 'Hesper, an American Drama' (Cambridge: C. W. Sever), shows more of the dramatic instinct, but not with any stage adaptation or, perhaps, intent; and his soldiers are a little too self-conscious. He has strong lines and phrases, and graceful interludes. All these are singularly deficient in a much longer and more ambitious work, 'Master, a Poem,' by John Ruse Larus (Putnams), which seems like a pale reflection of that fifty-year-old poem, 'Festus.' That had at least many fine and quotable passages; we cannot find such in 'Master,' although the author wrestles with mighty themes.

In Mr. John D. Ross's 'Scottish Poets in America' (Pagan & Ross) we have an admirable summing-up of a whole line of poetic descent, and it is extremely interesting to see how the minor muse of a really imaginative nation bears transplanting to a somewhat milder climate. There are some unexpected discoveries to be made, too, as when we find that the well-known poem, "It's dowie in the hint o' hairst," was possibly written in America, and certainly by an author who lived here during the greater part of his life, and died lately at the age of eighty-six at Louisville, Ky.—Hew Ainslie. He is described as a man of magnificent physique, and it is recorded of him by Mr. Ross, as a truly Scottish distinction, that in his youth he had kissed Burns's "Bonny Jean." His best-known poem begins thus, it being premised that "dowie" means sad, and that the "hint o' hairst" is the end of harvest:

"Its dowie in the hint o' hairst
At the wa' gang o' the swallow,
When the wind grows cauld and the burns grow bauld,
And the wuds are hingin' yellow;
But oh, its dowier far to see
The wa'-gang o' her the heart gaes wi',
The dead-set o' a shinin' e'e—
That darkens the wearie warld on thee." (P. 57.)

In 'Echoes from the Blarney Stone,' by W. C. R. (Chicago: Kerr), we have a less interesting showing of Irish poetry than Mr. Ross gives us of Scottish, but the Irish verse is by one man, and includes some fairly good fooling.

There are whole departments of poetry which have, doubtless, a certain value that bears no relation whatever to literary criticism. There is the religious poetry, devout but uninspired, and perhaps profitable to many hearts. To this class belong 'Comfort,' by Mrs. Herrick Johnson (A. D. F. Randolph & Co.), 'Lays of Memory and Affection,' by Caroline May (Randolph), and 'Reliques of the Christ,' by Denis Wortman, D.D. (Dutton). This last has been read by bishops and others "with tender, almost tearful interest." Then there is the poetry of the domestic affections, inspired by the muse of the old arm-chair. There can be no better type of this than 'Grandma's Memories,' by Mary D. Brine (Dutton), author of 'Grandma's Attic Treasures,' a work of which, as we are told, 30,000 copies have been sold. It may be called a thoroughly cosmopolitan book, the text being American, the illustrations English, and their execution German. To the great number of persons who would willingly see their grandparents represented with such countenances, costumes, equipages, and residences as no living American grandparents ever possessed, this book will be a source of delight and as good as a coat-of-arms.

Most of the volumes which we have mentioned are the work of youth; but two of the latest comers proceed from men past the prime of life, who have hitherto been better known in other paths than those of verse. Dr. Weir Mitchell's 'A Cup of Youth, and Other Poems' (Houghton, Mifflin & Co.) does not strike us as an advance on the highly dramatic poems contained in his previous volume, especially "A Masque" and "A Huguenot Story." The title-poem in this case has touches of similar power, but is less sustained, and there are highly elaborated scenes leading up to an ending so inadequate as to seem almost trivial. Nor are the meditative poems so striking as Dr. Mitchell has before given us, strong as are the three opening verses of this:

TO THE SEA AT DAWN.

The moon exults in new-born light
And, black athwart its gold,
The broken fragments of the night
Rock in their cradles old.

Ho, sturdy wooer of the great!
What need to mock thy power
With feeble woman-tales that prate
Of manhood's yielding hour?

The Norseland fury in us craves
To feel thy billows leap;
Claims kinship with yon bounding waves,
Calls cousin with the deep. (P. 63.)

Mr. T. W. Higginson has waited even longer than Dr. Mitchell before venturing on his one slender volume of verse, 'The Afternoon Landscape' (Longmans); a collection of which the keynote is perhaps given by the opening poem:

SONNET TO DUTY.

Light of d'm mornings; shield from heat and cold;
Balm for all ailments; substitute for praise;
Comrade of those who plod in lonely ways
(Ways that grow lonelier as the years wax old);
Tonic for fears; check to the over-bold;
Nurse, whose calm hand its strong restriction lays,
Kind, but resistless, on our wayward ways;
Mart, where high wisdom at vast price is sold;
Gardener, whose touch bids the rose-petals fall,
The thorns endure; surgeon, who human hearts
Searchest with probes, though the death-touch be given;
Spell that knits friends, but yearning lovers parts;
Tyrant resistless o'er our blisses all;—
Oh, can it be thine other name is Heaven?

Emerson in Concord: A Memoir. Written for the Social Circle in Concord, Massachusetts. By Edward Waldo Emerson. Boston: Houghton, Mifflin & Co. 1889.

MR. EMERSON, in writing a memoir of his father for the Concord club to which he belonged, has found an opportunity for supplying that human element in the life of the poet and philosopher in which Mr. Cabot's biography was felt to be conspicuously deficient. He regards his father as a man among men, especially in domestic and town life, and he has produced a valuable as well as an entertaining volume. He has used the method of anecdote and of apposite extracts from Emerson's journals; but though the material is fragmentary, the narrative is continuous, and derives a greater charm from its rapid changes. The traits of Emerson are the well-known ones, as before, but the new illustrations of them give more personality to him, perhaps as much because the volume is confined to this one purpose as for any other reason. In one important particular, however, the son makes a correction. He mentions the shrewdness ascribed to his father as a Yankee characteristic and enforced by his business dealings in behalf of Carlyle; but he says that this notion is erroneous. On the contrary, his father's capacity in these ways was of the slightest: "he had no business faculty, or even ordinary skill in figures; could only with the greatest difficulty be made to understand an account, and his dealings with the American publishers on behalf of Mr. Carlyle, adduced in proof of his Yankee 'faculty,' really only show what love and loyalty he bore his friend, that he would freely undertake for him duties so uncongenial and—but for outside help and expert counsel—almost impossible for him." His real-estate agent defrauded him for years, and would have walked off with the property itself had not Emerson's son-in-law, Mr. Forbes, taken charge of his affairs; and even in dealing with the publishers the same friend was able to make more

remunerative arrangements. The idea, therefore, that Mr. Emerson had any head for business must be abandoned.

What is told us of his gardening tends in the same direction, and shows the wisdom of his little boy's well-known criticism, "Papa, I am afraid you will dig your leg." His friends assisted him in the care of his acres. After a while he gave up handling hoe and spade, and confined himself to pruning and to picking up pears and apples. He was much interested in his fruits, and always sent specimens to the "Cattle-Show." One day the committee of the Massachusetts Horticultural Society called on him, and, in answer to his smile of "modest pride at having his little orchard thus honored," the chairman said· "Mr. Emerson, the Committee have called to see the soil which produces such poor specimens of such fine varieties." He was as little of a farmer as of a business man.

He endeavored to join in the life of the community as a neighbor and citizen, but he was always clearly conscious of the gulf which divided him from the mass. He would attend town-meeting and enjoy the rude encounter of wit and character there, but he seldom joined in it; he would "fight fire" with his pine-branch in the woods beside the rest, but he could not get on frank talking terms at the grocery or other rendezvous of the village people. His shyness was partly the cause, but there was a constitutional unreadiness in him also. This is completely expressed in the anecdote of his brother Charles saying to him, when he had professed his ability to be burned at the stake—"'Yes, but if any one spoke to you on the way there, you would be so abashed you wouldn't have a word to say.'" Upon this he remarks in his journal: "Charles's *naïf* censure last night provoked me to show him a fact apparently entirely new to him—that my entire success, such as it is, is composed wholly of particular failures; every public work of mine of the least importance having been, probably without exception, noted at the time as a failure. The only success (agreeably to common ideas) has been in the country, and there founded on the false notion that here was a Boston preacher." The respect of the people was also another bar to familiarity. His views were unpopular, but his character was prized, and every one went to hear his lectures. The audience did not always understand him, but they liked to hear him. One anecdote is illustrative. An old lady was displeased at the lecture on Plato, and remarked that "if those old heathen really did what Mr. Emerson said they did, the less said about them the better." The offending passage was as follows: "Plato especially had no external biography. If he had lover, wife, or children, we hear nothing of them. *He ground them into paint.*" But many of his hearers, doubtless, were fortunate if they could get so literal a meaning out of his words. The son, however, thinks that his father overestimated the isolation of his life from men and the difficulty of establishing relations with them.

The description of Emerson's habits is made up of scattered details. After he had passed the insecure period of his health, he was usually in good physical trim. "He always throve," it is said, "upon physical hardship, and took a certain pleasure in it." His principal exercise was walking, and he seldom took omnibuses or cabs. "He would walk across the city to his train, carrying usually his rather heavy leathern travelling-bag in his hand, at such a speed that a companion must run to keep up with him, and this without apparent effort or any noticeable effect of overheat or shortness of breath." He had no practice in riding. When he was fifty years old he skated with the children, and he was a strong swimmer. He learned to shoot a rifle, and in giving it to his son instructed him in loading and firing it, but "by no means with the readiness of a sportsman." He cared little for garden flowers, and would not touch pet animals, but he "went with zeal to Magner's secret horse-training lecture in the stable of the Middlesex Hotel." He always kept ears of corn in his study to catch the horse with. In his love of nature he seems not to have discriminated between beauty and wildness. In his family he was a careful educator. He insisted on a temperate observance of the Sabbath, and would not permit games to be played. The children had Bible-lessons and learned hymns, and in the afternoon he took them to walk, but not to drive. There was much of tradition in this. One day, it being rainy, Mrs. Emerson had told the children they might have a game of battledore and shuttlecock, but no sooner was the sound heard than the study door opened and Emerson said, "That sound was never heard in New England before on Sunday, and must not be in my house. Put them away." This, perhaps, tells the whole story. He looked unfavorably upon cards on week-days, and would not allow their use in the daytime. He took interest in the children's studies, and particularly in declamation, but he did not care to have them excel in singing: he thought he had observed that singing and oratory did not go together. Out of such details as these it is easy to obtain an impression of the home life.

From a literary point of view the most interesting portion of the book is what is told us at the end of Emerson's habits of composing poetry. The freeing of the poetical faculty in him was a slow process, and he had such difficulty in it that he believed completely in the impulse of the inspired moment. It is therefore the more singular that he worked over into poetry what first came to him in prose, and apparently wrote it down in prose with a view to poetry. The address to the sea which is given from the journal was not a case of this sort; it was melodious prose which, after writing, he discovered to be blank verse; but the first draft of "The Two Rivers" is a clear case of notes for a poem. It is not likely that born poets have often gone to work in this way; and we are by no means certain that, leaving out what was added in the poem, the prose version here is not the better of the two. He wished to be a poet, and prized what he did in that way; he lamented the inconstancy of the muse; he found something exceptional in his mental state in poetic composition. The assertion in his journal that he could not within a twelvemonth after the composition of "Days" remember either composing or correcting it, and "could not write the like to-day," is very singular. "I can breathe at any time," he says, referring to prose-composition, "but I can only whistle when the right pucker comes." He seems to have carried in his life ideal personages, like Saadi, and to have won expression for them a few lines at a time, which he afterwards joined by means of the unity of mood or view which belonged to them. The consequence was that none of these, which in another more fluent poet would have been longer poems or true creations, were completed. The history of Emerson's poetical growth is one of the most interesting in literature, and the contributions to it made here are valuable.

The editing of all this material is admirable; the tone of the writer, at once modest and frank, gives refinement to the style; and wherever he touches upon the life of the town—and this record is valuable for its own sake—he does so without offence. The volume will be one of the principal sources of knowledge about Emerson to all who desire to be acquainted with his life.

New Materials for the History of the American Revolution. Translated from documents in the French archives, and edited by John Durand. Henry Holt & Co. 1889.

WHAT are new materials for history? Mr. Durand has given us a volume principally made up of documents and extracts from documents which have not been printed in English before. On the other hand, many of the most important of them have appeared in French in such well-known works as 'Beaumarchais et son temps,' by Louis de Loménie, and the great compilation now appearing from the hand of M. Doniol. Some entirely unpublished matter there probably is, but it is hard to say how much, for Mr. Durand gives very few references to printed books, and none to the classified volumes or dockets of the archives. Nor are the documents, as we get them from him, entirely satisfactory. There is a certain scrappiness in his method of editing. He leaves out too much, and does not always warn us where his elisions occur. To the historical scholar, therefore, in search of new material, the book will prove a disappointment. There is nothing in it to change his views on any important historical subject, nor are the original sources presented in a trustworthy form. To the general reader, on the other hand, this small and interesting volume may be recommended. To him it will be rendered easy reading by the very qualities which make it comparatively valueless to the student. The author is not thoroughly read in his subject, but he has a good general understanding of it. His views are mainly sound, although he holds them a little too unreservedly. He writes with the freshness and enthusiasm of a discoverer—an enthusiasm none the less sincere because the discoveries have mostly been made before him.

About half the book is taken up with the relations of Beaumarchais to the United States. The author is apparently unaware of the light thrown by Bettelheim on the character of that fascinating adventurer. In the matter principally treated of here, however, *Figaro* was in the right, and the United States were at first innocently, and afterwards culpably, in the wrong.

In dealing with this affair, and in other parts of the book, we think that Mr. Durand is carried a little too far by his almost exclusive reliance on French sources. Particularly is this the case in his treatment of John Adams. That statesman was obstinate, suspicious, and wanting in tact; but is it not a little absurd to represent him (as Vergennes did in his instructions to Luzerne) as belonging to a party "principally engaged in effecting a reconciliation between the United States and England, in negotiating with and forming an alliance with the Court of London"? We can see no inconsistency between the statements in a letter from Adams to Vergennes, given on page 223 of Mr. Durand's book, and the passage from Adams's diary of an earlier date, quoted in a note on the same page. The letter of May 12, 1780, runs thus:

"When we hear them affirm in Parliament that America is on the point of returning to an allegiance with the King of England; . . . when the members of the Opposition, . . . such as Mr. Hartley, Gen. Conway, and others, discover plainly by their motions and arguments that their object is a separate peace with

America in order to be the better able to gratify their revenge against France and Spain, I can have no expectations that they think of applying to me, because I think they might be convinced of this at least, that I shall make no separate peace. . . . Our alliance with France is an honor and a security which have ever been near my heart. . . . I have ever thought it, therefore, a national alliance, and contended for it as a rock of defence. This object I proposed in Congress with persevering assiduity for more than a year in opposition to other gentlemen of much greater name and abilities than mine."

The diary, dated April 29, 1778, is as follows: "I will be buried in the ocean, or in any other manner sacrificed, before I will voluntarily put on the chains of France, when I am struggling to throw off those of Great Britain."

It is true that the aid rendered by France was invaluable to the United States, but the question presented to patriotic Americans was whether the attitude to be assumed towards the more powerful country was that of an ally or of a dependent. John Adams, with almost ludicrous vehemence, both in season and out of season, rejected the latter alternative, and, while we may smile at his vagaries, we can but honor the sturdy independence of his patriotism.

Buddhism: By Sir Monier Monier-Williams, K.C.I.E. London: John Murray; New York: Macmillan. 1889.

THIS volume is the outcome of the Duff Lectures delivered by the author at Edinburgh in the month of March, 1888. "Dr. Duff was a man to whom Scotland has assigned a place in the foremost rank of her most eminent evangelists; and he has earned an enduring reputation throughout India and the United Kingdom as the prince of educational missionaries." So spake the lecturer in introducing his subject. No doubt a course of lectures on "Buddhism" is befitting such a subject, although we may be tolerably certain that Dr. Duff never met, or conversed with, a single Buddhist in India. That religion is clean wiped out from the country of its birth, although it still lives there under other forms and other names. In this sense, "Buddhism" may properly be investigated "in connection with Brahmanism and Hinduism." As to its "contrast with Christianity," to which point the lecturer also devotes himself in the last chapter of his book, the investigation is intended to lead up to an answer to this question: "Which doctrines [*i. e.*, Christian or Buddhist] are to be preferred by rational and thoughtful men in the nineteenth century?" We should have thought no elaborate contrast between the two systems of belief was necessary for a reply to this question. The true interest which attaches to the study of Buddhism centres in the query, *not* whether it is a rival in any way of the Christian religion, but whether, in the order of the law of *continuity*, observable in the spiritual as well as in the physical world, it did not prepare the way for Christianity and assist in shaping it as a religious system. This is the question which is engaging the attention of many "rational and thoughtful men" in the present day.

Sir Monier Williams divides his book into eighteen chapters, each of which contains matter for careful consideration. It is difficult, within the compass of a short review, and in consideration of the complexity of the subject, to select points for remark. There is one conclusion, however, to which the lecturer comes, in computing the number of Buddhists in the world, with which we fully agree. No doubt the number has been overestimated. The Chinese are not Buddhists to any great extent. They affect to despise the system; nevertheless, they tolerate it. The calculation of Dr. Happer that there are only 20,000,000 of Buddhists in China, may be short of the mark, but it is not very much out of the way.

Perhaps the most interesting chapter in the book is the fourteenth, which treats of the "Sacred Places" of Buddhism. The interest of this lecture is derived from the fact that the lecturer has himself visited many of the spots he mentions. For instance, at Buddha-Gayā, which is a kind of Buddhist Jerusalem, the author tells us that the temple which he saw there in 1876 was "probably not built until the middle of the second century, but was erected on the foundation of Asoka's temple, the ruins of which are traceable under the present one" (p. 390). He describes it as built of bluish bricks and plastered with lime. At the back of the terrace which surrounded the temple was a Pipal or sacred fig-tree, fabled to be the very one under which Gautama sat during his profound meditation which led to his enlightenment. The temple and tree have now disappeared. The authority of "the Society for the Preservation of Ancient Buildings," vulgarly yclept "the Anti-Scrape Society," does not extend to India. Consequently, the British Government in 1881-82 undertook to improve this ancient monument off the face of the earth. A lakh of rupees has been spent in accomplishing it.

"The reconstruction of the building led, of course, to the removal of the sacred Bodhi-tree, but an effort was made to preserve the tree by transplanting it to a neighboring garden. No sooner was this done than parties of pilgrims from Burmah and Ceylon, in their pious desire to maintain the vitality of the venerated tree, covered the stem with gold-leaf, and, bringing eau-de-cologne and other scents, poured them over the roots, at the same time manuring them with the contents of boxes of sardines steeped in oil, choice biscuits, and other delicacies. Of course, the result was the speedy destruction of the tree, root and branch" (p. 393).

Such was the tragico-comic end of the oldest historical tree in the world.

The whole book, although to a great extent only a compilation, deserves thoughtful study. It has been skilfully put together, and includes a vast amount of authentic information. Whether it will tend to solve the vexed questions which still perplex people who have studied the subject, we are not at all sure.

Ancestry of Thirty-three Rhode Islanders (Born in the 18th Century), etc. By John Osborne Austin. Albany: Joel Munsell's Sons. 1889.

TWO years ago we were praising the large, the monumental work by the same author, the 'Genealogical History of Rhode Island.' The present volume has the same shape as its predecessor, and is a sort of sequel to it—a portion of the at best narrow field being selected for further elaboration. The thirty-three are drawn from various walks in life. Nearly one-half of them are to be found in 'Appletons' Cyclopædia of American Biography,' and most of the remainder held public stations, State or national, or were prominent as merchants, manufacturers, lawyers, or physicians. The best-known are Wm. Ellery Channing, Nathanael Greene, Stephen Hopkins, Oliver Hazard Perry, and Gilbert Stuart; Nicholas Brown and Rowland Hazard and William Sprague are scarcely less notorious. In two instances the wife's pedigree is substituted for the husband's (Crawford for Allen, Wanton for Lyman); in one, the mother's (Waterman for Jackson). A very slight examination of Mr. Austin's indices is sufficient to show that not a person on his list is unrelated to one or more of the other thirty-two. This proceeds not from his selection, but from the smallness of the community with which he is dealing; and as the fact is both curious and stimulating (in a genealogical sense), we wish he had made it plain in a special table. His group embraces the most prolific Rhode Island families, such as (besides those already enumerated) Arnold, Fenner, and Harris; and at least five of the thirty-three unite their pedigrees in Roger Williams.

Hence the second section of this work consists of "twenty-seven charts of Roger Williams's descendants to the fifth generation," among which occur yet other familiar Rhode Island surnames—Angell, Brenton, Cranston, Dyer, Jenckes, Olney, Randall, Rhodes, Tibbitts, Tillinghast, Tourtellot, Whipple, etc. The males who perpetuate the founder's name number 75; while the total of his descendants distributed among 52 stirpes is 849.

Another very fruitful line is that of Latham, which goes back to the centenarian Lewis Latham (1555-1655), Falconer to Charles I. His daughter Frances, though only attaining the age of sixty-six, contrived to marry four times, accompanying her third husband to America, together with her children by her second, and becoming the progenitor of the great tribe of Clarke, and of five Governors of Rhode Island. Many Rhode Islanders trace back to her through the two lines of Dungan and Clarke. Mr. Austin gives a very interesting biographical page to her father, and then charts his posterity through Frances and her eleven children (four Dungan, seven Clarke), showing eighty-two great-grandchildren.

Frances Latham probably brought with her to this country a portrait of her father which is still preserved, and this interesting relic is enumerated in the fourth section of Mr. Austin's thesaurus, namely, a list of "Prominent Rhode Islanders of whom Portraits in Oil (or otherwise) exist (including a few others intimately connected with Rhode Island history [such as King Charles II., grantor of Rhode Island's charter, Bishop Berkeley, Washington, Wayland, etc.])." This shows in one view the dates of birth and death, occupation or distinction, name of the artist, and the depository of the portrait.

Such is the scheme of this original work, whose execution is worthy of the highest praise for clearness, compactness, and accuracy, betokening a special intelligence and aptitude for genealogical exposition. We wish that a territory both more remarkable and more restricted—to wit, Essex County, Massachusetts—could be similarly illustrated by a compilation that ought not to be difficult to make, seeing what a vast store of material lies ready to hand in books. The case has been quite otherwise with Mr. Austin.

The Counter-Reformation. By Adolphus William Ward, Litt.D. [Epochs of Church History.] A. D. F. Randolph & Co.

THE appearance of Dr. Ward's 'Counter-Reformation' makes one wonder again whether the business of making "epoch-books" is not being overdone. It is hard to imagine who can be served by such a book as this. It can be of little use to the young student, since it continually assumes a knowledge of events and a familiarity with technical terms which none but a scholar could be expected to have. For the scholar, however, it contains nothing which he could not get much better and with no more trouble in many other books. It offers him no new points of view; nor even—what has justified many a small book—does it provide him with any convenient apparatus for the better

use of his material. As for the "intelligent reader," he would almost certainly be repelled by the dulness of the narrative, its entire absence of proportion or of light and shade, and its frequent obscurity.

Yet the subject is a very tempting one. The Roman Church, roused at last to its danger, summoning all its vast resources of virtue, enthusiasm, courage, organization, violence, unscrupulousness, and turning them all to the one great purpose of recovering its hold upon the conscience of Europe—this is a theme which might well appeal to any scholar. Its central motive is the Council of Trent—itself a subject quite large enough for an "epoch-book." We should have welcomed gladly any clear exposition of the exceedingly complicated motives which brought about the final result; but what does Dr. Ward's chapter of forty pages on the Council give us? Only a scrappy series of paragraphs, without definite sequence or unity of purpose. His English is at times extraordinary. "Implicitly, the exercise in the Empire of any Confession by the side of the Roman, except that of Augsburg, was prohibited"; "Material interests, and religious and educational likewise, to a very considerable extent, were threatened by its incidence," are illustrations, selected at random, of a style which might, perhaps, be pardoned if it were the vehicle of weighty matter.

Let us have no more epoch-books, or let them be written carefully and with some definite purpose beyond that of filling a gap in the series.

The Chemistry of Photography. By Raphael Meldola, F.R.S. [Nature Series.] Macmillan & Co. 1889.

PROF. MELDOLA'S work will receive a hearty welcome, not only from professional photographers who wish to understand the scientific principles upon which their art is based, but even from chemists and physicists, who will find in it no small matter for thought and study. The work is not a treatise on photography. It consists of nine clear and carefully written lectures, with appendices giving well-chosen experiments, many of which are new. The author first points out the distinction between photo-chemical and photo-physical changes, giving as instances of the first the action of light upon salt of silver, and of the second the action upon phosphorus and selenium. Attention is then directed to various metals, the compounds of which are decomposed by light; the chemical action being, so far as known, expressed by equations as customary with chemists. The details are very full and instructive. Then follows the special treatment of the silver compounds, followed by the theory of the action of sensitizers, with some historical notices. We have next the curious details of emulsion photography and the theory of developers and restrainers, with the explanation of many interesting special phenomena like that of reversal. Lecture vii treats of spectrum photography and of reversals in the spectrum. Next comes the important subject of the relationship between photo-chemical decomposition and the absorption of light, the subject of ortho-chromatic photography being very well treated. The last lecture deals with processes subsequent to development, such as intensification, and in conclusion we have an account of the chromatized gelatine and pigment printing processes. The book deserves very hearty commendation as a popular scientific treatise in the best sense of the term.

A Chinese and English Phrase-Book in the Canton Dialect. By T. L. Stedman and K. P. Lee. New York: William R. Jenkins. 1888.

THIS useful manual may be properly called "English without a Teacher." It is constructed on the "glossic" system, every sound being represented by a character or symbol of the Chinese approaching as nearly as possible to the utterance required. But it is not only for the Chinese, but for English-speaking people, that the book is designed to be useful. On each page, opposite the artificial Chinese sentences, are found the true Cantonese equivalents, number for number; so that a student may learn his Chinese, as the Chinaman learns his English, from the same page.

The labor of compiling this little book must have been very great. There are forty-one lessons, on all sorts of subjects, included within 167 pages. Each page contains from nine to eleven sentences, and each of these sentences on the one side is phoneticized into broken English, and on the other is reproduced in genuine Chinese dress, with the Canton pronunciation of each character. It is an amusing as well as a most useful manual—"pidgin" English is always an amusement; but this book is far in advance of the Hong Kong Anglo-Portuguese gabble. There is a system observed throughout. The same symbol always represents the same sound, so that when the Chinaman has once got hold of the sound in one sentence, he will know how to reproduce it in another.

As a specimen of the method, we will take the first question in the book—"Good morning, sir; how do you do?" This is conveyed to the Chinese reader in the following dress: "Ku-ta-mo-ning-sha-hau-to-iu-to." And so for the rest. We doubt not the book will be a popular one, and it richly deserves to be used and to be praised.

Midnight Sunbeams; or, Bits of Travel through the Land of the Norseman. By Edwin Coolidge Kimball. Boston: Cupples & Hurd. 1888.

MR. KIMBALL takes his readers over a route that has often been described by recent tourists. From Copenhagen to Stockholm by way of the Gotha Canal, thence by rail to Trondhjem, thence by steamer to the North Cape, with a variety of Baedeker excursions in Norway upon the return—all this is coming to be almost as much an old story as Switzerland and the Rhine. Nevertheless, Mr. Kimball has made a fairly readable book, a book which will be useful to the prospective tourist, and not without interest to the general reader. He writes in a plain, straightforward style, and confines himself strictly to his own personal experiences. There is no suggestion that he is ambitious to be thought a profound observer or a clever literary artist. He simply goes from place to place, sees the regulation sights, and tells us how he was impressed and how he fared in respect of accommodations. The matter of the book is such as an experienced tourist might write in the form of letters to an elderly friend at home; but, while written in a somewhat quotidian vein, Mr. Kimball's pages sufficiently indicate a warm feeling on his part for the Northmen and their country.

BOOKS OF THE WEEK.

The Mother's Register.

*In any family, whether large or small, but es*pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Prof. J. B. Fonssagrives's 'Mother Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1.25 for two volumes.

"By far the most practical record for the period of childhood that I have seen, . . . a separate part being devoted to the girl, in which are points of great importance as references in her after life. The completeness of its items and its convenient arrangement insure the entry of important events."—*C. E. Warren, M.D., in Babyhood.*

IMPORTANT EDUCATIONAL RECORD.

THE NEW YORK EVENING POST will publish on June 26 a special college edition, giving a summary of the work done in all the colleges of the country during the year.

No educator can afford to be without the valuable statistics which it will contain. 3 cents per copy.

The Nation.

NEW YORK, THURSDAY, JUNE 27, 1889.

The Week.

THE popular verdicts against prohibition have been coming with cumulative force for two years now, no less than eight States having rejected it by steadily increasing majorities. Pennsylvania closed the list on Tuesday with the crushing adverse majority of 185,000. As a culmination of the series came the decision in Rhode Island on Thursday to repeal an amendment which had been in operation for three years, both the vote in favor of repeal being greatly in excess of the necessary three-fifths of the whole, and the vote in favor of retaining the amendment being one-third smaller than that cast for its adoption three years ago. There can be no question as to the meaning of this decision. Prohibition, which had been put on trial by popular vote, has been found to be a failure in practice, and has been condemned. That the Rhode Island law has been not only a complete failure, but a most pernicious influence, cannot be questioned. When it was first put in operation in 1886, there was for a time a perceptible decrease in open liquor-selling, and also in drunkenness, but it was only for a short time. The liquor-dealers soon found that they could sell without much danger of interference by taking slight precautions, and within six months their business has not only returned to its former proportions under license, but has actually exceeded them. Figures given out by the prohibition advocates themselves during the recent campaign prove this. They published a table, which for some inscrutable reason they supposed sustained their case, giving the commitments to the House of Correction, to the State Prison, and for common drunkenness, as they were recorded under license and under prohibition. From these it appeared that during the last year under prohibition there had been precisely the same number of common drunkards as there had been in the last year under license; that the number of commitments to the House of Correction had been 521 during the last year of prohibition, against 498 during the last year under license; and that the commitments to State Prison during the last year under prohibition had been 69, against 53 under license.

The secret-ballot law which has been passed by both houses of the Connecticut Legislature is in no sense an application of the Australian system. It provides for a secret ballot, and forbids any ticket-peddlers to approach within 100 feet of the polls. These are important advances in the direction of honest elections. They are similar to those of the Milwaukee law, which worked so well in practice that the Wisconsin Legislature was convinced of the wisdom of adopting the Australian system and applying it to the whole State. In other respects the new Connecticut bill is not of great consequence. There is little to be gained by having the State furnish the paper for the official ballots, so long as the political organizations are to have charge of the printing and distribution of them. The envelope provision is of no apparent consequence one way or another. It was tried in Louisville and was pronounced unnecessary and confusing. It is a curious spectacle to see the Connecticut politicians who are so alarmed about the complications of the Australian system, taking up the very part of that system which has been tried and rejected because it makes complication.

The promoters of ballot reform in Massachusetts have taken a wise step in forming a Ballot-Act League for the special purpose of securing an effective operation of the new law when it receives its first trial at the election next fall. They have made a thorough organization, with Elihu B. Hayes of Lynn for President, Richard H. Dana of Cambridge for Treasurer, and Josiah Quincy of Quincy for Secretary. The League is entirely non-partisan in its character, and its list of officers contains the names of prominent members of all political parties. All persons interested in the objects of the League are invited to become members. Names should be sent to Albert C. Burrage, Assistant Secretary, 8 Congress Street, room 10, Boston. The admission fee of one dollar may be sent either to the same address or to Richard H. Dana, Treasurer, 30 Court Street, Boston. The League invites correspondence from city and town officials and others, and will endeavor to furnish all possible information on matters covered by the law. All such correspondence should be addressed to the office of the Assistant Secretary, as above. Several committees have been appointed, and are already engaged upon such branches of the work in hand as the following: (1) on preparation of forms under the act (nominations, etc.); (2) on preparation of plans, specifications, etc., for polling arrangements; (3) on preparation of information to election officers, political committees, and the general public; (4) on distribution of printed matter; (5) on procuring appointment of competent election officers; (6) on membership and branches; and (7) on finance. The idea of the League is as admirable as it is necessary, and should be adopted in the seven other States which have similar ballot laws. The Secretary of State, in Massachusetts, and Mayor Hart of Boston have promised their coöperation in the work there, and we have no doubt that State and city officials in other localities would do the same. It would give the politicians everywhere great joy to see the new system fail, or prove cumbersome on first trial, and they will do all they can to impede its working. For that reason its friends should be on the alert.

Gov. Bulkeley of Connecticut is said to have been greatly disturbed by the coupling of his name with Gov. Hill's, owing to the similarity of the views of both concerning the best way of reforming election methods. If this be so, Gov. Hill has no intention of helping him to cut loose from the companionship, for he has hastened to assure a reporter of his Albany organ that the new Secret-Ballot Bill which the Connecticut Legislature has passed and Gov. Bulkeley has signed, is "in substance the Linson bill," which Gov. Hill himself recommended the New York Legislature to pass in preference to the Saxton bill. He declares that he would have signed such a measure with pleasure, and shall recommend a similar one to the New York Legislature next year. This is the most unfavorable criticism which has yet been made upon the Connecticut bill, and it leaves Gov. Bulkeley and Gov. Hill more firmly coupled than before. A fresh bond of union is also furnished by the former's determination not to sign a high-license bill which the Connecticut Legislature passed.

An amusing light is thrown upon the character of Gov. Hill's deliberative methods with legislative bills by the discovery that two which he finally vetoed were first approved and signed, and the signature subsequently removed by the use of acids. The acid did its work pretty well, but it left traces, which, being closely examined, read: "Approved, June 15, 1889. David B. Hill." One of the bills which were thus decided upon in two ways was the Capitol Appropriation Bill, and the other provided for the appointment of six female factory inspectors. The question is raised by the friends of these measures as to the date of the erasure, the contention being that unless the approval was erased before the end of the thirty days' limit for considering bills, both measures became laws and could not be vetoed by the Governor. There is a suggestion that the Governor be put under oath and made to give the date upon which he executed formally his change of mind, but this will probably not be attempted. It would be interesting, however, to know the exact nature of the reasons which decided his final action.

The full reports of the proceedings in the Indianapolis Post office investigation add many interesting points to the telegraphic summaries, and make more plain the cause for the bitterness which Postmaster Wallace and the other Republican spoilsmen now manifest against Mr. Roosevelt. On the morning of the investigation the Indianapolis *Sentinel*, the leading Democratic newspaper in the State, published prominently on its first page, under the heading "Some Valuable Pointers for the Civil-Service Commission," brief biographies of the rascals appointed in the office, like this:

> CHARLES F. MOORE.—Moore was in office under Postmaster Jones; ran a gambling-room in the Talbott-New block; was arrested and fined therefor and incontinently fired. Reinstated by Postmaster Wallace.

When the Commissioners opened their session, the Republicans present were shocked to see Mr. Roosevelt, a Republican, holding in his hand this dreadful Democratic sheet, and simply horrified when he accepted it as good authority and asked if what it said was true. The spoilsmen hemmed and hawed over the injustice of convicting a man on newspaper reports, but finally admitted that the *Sentinel's* statement was correct, and were promptly told that "Moore's reinstatement was null and void."

Later in the proceedings the spoilsmen made another atempt to discredit the *Sentinel*, but it was of no avail. Said Mr. Roosevelt:

"Since the gentleman complains of our treating him badly, I shall state frankly that the fault is all his own. The history of this Post-office since Mr. Wallace came into possession of it, has been such as to convince any one knowing the facts that politics had ruled the appointing power. It is useless to discuss the matter; the men cannot remain in the service another day longer. This decision may serve to prevent a recurrence of what has undoubtedly already transpired. We have been inclined to think that these violations of the law have been made as the result of ignorance and lack of familiarity with the law, and have been inclined to be lenient on that account. But this instance makes it appear as if they were malicious. As to the course of newspapers, that is their business. They would be derelict in their duty to the public did they not expose illegal acts in the public service."

Finally, to cap the climax, the *Sentinel*, that odious Democratic paper, on the morning after the investigation, bestowed the heartiest praise upon Mr. Roosevelt, saying: "Theodore Roosevelt, who, in the main, conducted the examination, manifested much skill, clearness, and independence. As a whole the Commission exhibited great earnestness and sincerity in its work. Its visit, though too long delayed, may yet have the effect of redeeming the office from the crowd of ward heelers who were rapidly gaining undisputed sway over it."

A recent special to the Boston *Herald* represents the President as much disturbed by the public criticism on his Sunday jaunts. He says:

"Don't you think they are utterly unreasonable? As you know, no one is more solicitous for the proper observance of Sunday than I am, and no one would be more scrupulous about his own conduct in this respect than I have been; yet these newspapers are trying to make people believe that I have suddenly become grossly inconsistent in this regard. They know just how it is. They know that I have no other time for rest, and they know that I must rest if I am to keep on with my work."

But the people do not want President Harrison to "keep on with his work"—that is, the sort of work he has been keeping on with. So far as the President specially needs rest, it is because of his pernicious activity in the loot of the civil service, and of his contentions with the horde of office-seekers whom he invited from the first in his inaugural address, and continues to encourage by making vacant places for them. His "work," so far as it is peculiarly fatiguing, is such that he and the country would be much better off if he were to abandon it. And it is not merely injurious, but it is self-imposed.

The State of Connecticut has adopted a new method of collecting taxes on intangible and invisible personal property, such as bonds, promissory notes, and choses in action. Hitherto it has been incumbent on the owners of such property to list the same for taxation, and to swear to the correctness of the list. Only the more conscientious taxpayers complied with the law, and it would seem that this class was growing smaller or poorer from year to year, since the amount of such property listed is growing less and less. The new law provides that the owner of any property of this description may present it to the State Treasurer, and, by paying a tax of 1 per cent. on its face value, have it stamped free of all other taxation for five years, or at the same rate for any greater or less period—*i. e.*, at the rate of two mills per annum. The operation of this law will be awaited with interest. It will be interesting to see, in the first place, how many people will come to the front and acknowledge that they have been cheating the State and swearing falsely in the past. In the way of easing consciences, the act might prove efficacious if it did not tend to expose past offences. But it is not quite certain that people who have been withholding a tax of four or five mills on the dollar heretofore will now purchase the easing of their consciences by a payment of two mills. We quite agree with the Hartford *Courant* that "there are some queer features about the way it will work." The last Tax Commission of the State recommended that this kind of property be exempted altogether on account of the difficulties and inequalities of collection. Probably the Legislature eased its own conscience by adopting this half-way measure. The tax on this kind of property in Pennsylvania is only three mills per annum, and the methods of collection are much more drastic than in Connecticut; but the Auditor-General of the former State, in his report for 1886, said that not more than one-half of the property subject to the tax was got hold of.

The annual report of the Bureau of Labor Statistics for Illinois for the current year is chiefly concerned with the subject of mortgage indebtedness. Statistics showing the state of such indebtedness in the years 1870, 1880, and 1887 are presented, together with such evidence as could be obtained as to the actual value of farming lands in the State. Leaving town and city lots and the suburban lands of Chicago out of the account, the mortgages on all other lands run as follows:

Year.	
1870	$95,721,003
1880	103,525,237
1887	123,733,098

Separating as far as possible mortgages representing deferred payments of purchase-money, from loans, the Commissioners think that the mortgage indebtedness of farmers for borrowed money has increased 23 per cent. since 1880, and that this is more than twice the ratio of increase in the value of the farm lands. An increase in land values is reported in 25 counties, a decrease in 20 counties, while in 16 the values have remained unchanged.

The *American Wool Reporter* rebukes the New York *Press* for its jesuitical statement that the free-traders are trying to stir up trouble between the wool-growers and the woollen manufacturers. The truth of the matter is (says the *Wool Reporter*) that there are very positive differences between the wool and woollen interests, and that the free-traders, although glad to chronicle them, did not originate them. "The very lowest possible compromise," it continues, "between the low-tariff and high-tariff elements in the wool interests at present will consist in substituting ad-valorem for specific duties on wool." This is flat, but the flatness of it is not fully apparent unless we recall what the wool-growers are aiming at, and what they succeeded in accomplishing in the Senate after the election of Harrison. The Senate Tariff Bill, as originally reported, fixed the duties on carpet-wool costing 12 cents or less per pound at 2½ cents per pound, and on the same costing more than 12 cents at 6 cents per pound. When Congress reconvened after the election, the Finance Committee reported amendments raising the former duty to 4 cents and the latter to 8 cents — the existing rates being 2½ and 5 cents respectively. The importation of carpet-wools amounted to 82,000,000 pounds in 1887, while that of all other wools was only 33,000,000 pounds. Now, it is not likely that manufacturers will consent to any bill which, while substituting ad-valorem for specific rates, nearly doubles the rate of duty on this grade of wool. Nor is it probable that the wool-growers will consent to a change from specific to ad-valorem unless they get the increase they asked for, and which the Senate conceded to them only six months ago. It is a very hopeful quarrel, and the free-traders are not only glad to chronicle it, although they did not originate it, but they will help to promote it in every possible way.

The final decision of the Civil District Court in New Orleans against the Cotton-Oil Trust is the most important item in the news of the day. The Trust is adjudged guilty of usurping, intruding into, and unlawfully holding and exercising the franchises and privileges of a corporation without being duly incorporated, and is for ever excluded and debarred from the said franchises and privileges within the State, and declared to be an illegal and invalid association, and defendants are condemned to pay all costs. This is the result of two or three years' litigation. It is probably a surprise to the majority of the legal profession, just as the decision of the Supreme Court in the Illinois Warehouse case was a surprise. There is every reason, however, to believe that it will be sustained by the higher courts and by the courts of other States in analogous cases.

The election of Prof. E. B. Andrews to the Presidency of Brown University is an event of distinct importance to the cause of liberal learning in this country. In preferring him above many older and more conservative men who were proposed for the place, the trustees of the University have shown that they are in favor of the infusion of young blood and progressive ideas into the conduct of the college. Prof. Andrews was the favorite candidate of the younger alumni. He is still a young man himself, about forty-five years of age, and belongs to the class of writers and thinkers who place scholarship above all political influences and considerations, and who agree with Emerson that to the seeker after truth "nothing is at last sacred but the integrity of your own mind." He was graduated from Brown University in 1870, and then went to Newton Theological Seminary, where he was prepared for the ministry. He has preached somewhat, but has taught more since that time, and as a teacher has developed the invaluable gift of imparting enthusiasm to his pupils. When, about a year ago, he resigned the chair of History and Political Economy, which he had held for a short period at Brown, in order to accept a similar chair at Cornell, his loss to the former college was regarded as very serious, for he had already made himself not only a force in the life of the college, but a valued influence in the city of Providence. He not only entertains liberal ideas, but has the courage to express them. We need only recall his article on "Trusts according to Official Investigations," which he published in the *Quarterly Journal of Economics* in January last, and which we commended at the time as a model of economic discussion.

The most important undertaking for the advancement of art in this country in many years is the forming of the American Fine Arts Society, which is primarily a coalition for business purposes of the Society of American Artists, the Architectural League, and the Art Students' League. These societies represent in their several directions the young and vigorous movement of American art in its best phase, and anything that tends to unite more closely their interests and influence is likely to be potent for good. The American Fine Arts Society is incorporated under the General Manufacturing Act, and its stock is to be taken by the three societies named or by their members or friends. Its purpose is to provide a building which shall contain permanent quarters for these societies and galleries for their exhibitions. Provision has been made also for the Society of Painters in Pastel and for the New York Art Guild, a business organization for the protection of artists in their dealings with exhibitions throughout the country. While none of these organizations is sufficiently rich to provide itself independently with permanent quarters, the sum they collectively spend in rentals is sufficient to maintain a large and handsome building for their joint use. The plan of the new organization for this purpose has been submitted to business men of the highest standing, and is pronounced thoroughly practical and feasible.

While the combination is thus beneficial from a business point of view, it is even more promising from the point of view of the dignity and influence of the several organizations concerned in it. They are largely identical in aim and interchangeable in membership. The Society of American Artists and the Architectural League have many members in common. The Society of Painters in Pastel is composed entirely of members of the Society of American Artists, and the latter Society furnishes all of the teachers in the schools of the Art Students' League and some of the members of that League. A closer union of all these bodies was therefore in every way desirable, and now that it is effected and that there is a prospect of obtaining a permanent habitation of their own, a career of incalculable usefulness seems open to them. In dignity and thoroughness of equipment the new organization should be second only, if even second, to the Academy of Design, while the absence of any limitation of the membership of the several societies will tend to keep it always a more liberal and progressive body than the latter. The life fellowships which the new Society has founded entitle the holder to five season tickets to each of the several exhibitions of the Society of American Artists, the Architectural League, and the Society of Painters in Pastel. The purchaser of a fellowship will thus find himself entitled to admission to three of the most interesting exhibitions of the year, while he can feel that his money is aiding the progress of art in America in the most efficacious way possible.

The resolution of the Los Angeles Chamber of Commerce in favor of the annexation or purchase of Lower California, together with the alleged intention of Senator Stanford to urge the matter in the next session of the Senate, has been taken rather more seriously than it deserves by the Mexicans. The Mexican Senate recently voted to call upon the Government for any information in its possession bearing on the matter. On May 30 Secretary Mariscal appeared before that body, in secret session, and detailed the attitude observed by the Administration in the affair. Of course his remarks are not given out for publication, but it is freely said by Senators that he completely satisfied them of the determination of President Diaz to uphold the national dignity and to maintain the integrity of the national territory. It would seem, from all accounts, that our Government had at least made some advances to Mexico to ask if any proposition from us in regard to Lower California would be considered; but this is by no means certain. At any rate, it is made evident that Mr. Blaine will have to look far afield for any strip of territory to spend the surplus in acquiring. Spain has declared almost defiantly that the United States have not money enough to buy Cuba, and now the Mexican Government affirms that the only way for us to get any more Mexican territory is to fight and beat the Mexican Army.

Peru appears to be about to fall into new troubles. The prolonged hitch over the ratification of the compact with the holders of Peruvian bonds has now given way to a political crisis of the sharpest kind. The Doughnomore contract failed of legal ratification, through the persistent absence from their seats of a number of members of the House of Deputies, who took that way of defeating a measure extremely obnoxious to them. President Cáceres has responded by a decree declaring the seats of these obstructionist deputies vacant. A cry of protest at once came up from the departments thus summarily deprived of representation. The reply of the President was the despatching of a body of troops to quell the rising discontent, and to arrest all those who had the temerity to sign memorials protesting against the action of the Executive. When Congress met recently, Government patrols were at the place of assemblage to keep out the offending members. More than this, they went so far as to exclude the President of Congress himself, Señor Arenas, who had not been mentioned in the decree of expulsion. He endeavored to assert his rights under the Constitution and the laws, but without avail. President Cáceres seems determined to carry his measures through with a high hand, and will have a submissive Congress or none at all. His excuse is, of course, that the prosperity of the country demands the speedy settlement of the long-standing dispute. This may be true; yet his methods are of a kind to produce worse evils than he aims to cure.

The reassembling of the Spanish Cortes, June 14, was in pursuance of a very shrewd plan on the part of Sagasta. To maintain party discipline and a peaceable procedure, it was absolutely essential to get the refractory President of the Chamber, Martos, out of the way. Yet he steadily refused to resign, and an effort to depose him would be of an uncertain result. Sagasta might, as we recently pointed out, have chosen not to call the Cortes together again at all; but he is naturally anxious to press on his financial measures, and get a chance to go to the country for the next general election, with the great advantage of at least having tried to pass the Universal-Suffrage Bill. What he did was to get the Queen Regent to declare the session of the Cortes, suspended by royal decree in the latter part of May, now closed, and to call that body together again for its last legal session. This was a neat way of putting Martos out of office, and his successor was easily elected, in the person of a strong friend of the Administration, as soon as the new session began. It is agreed on all hands that Sagasta has managed the affair most dexterously. His estimates are now being voted. After they are out of the way, he will throw the whole strength of the Administration in favor of the Suffrage Bill, and, whether he can carry it or not, it will be the principal plank in his platform for the next election.

ROTATION AND THE PRESIDENCY.

Mr. F. W. Whitridge's interesting article on "Rotation in Office," in the current number of the *Political Science Quarterly*, exposes most satisfactorily a vast amount of humbug and cant in connection with the subject. Mr. Whitridge proves conclusively that when the founders of the Government talked about the necessity of rotation in office, they meant rotation in elective, not minor executive and administrative, offices. He cites not only Washington and Adams on this point, but Jefferson himself, in language which is perfectly clear and unmistakable. But these citations are, as he says, superfluous, because the practice of these early Presidents is a much more clear demonstration of their theory than any words could have been. There was no rotation in office in their time, except in elective offices. During the first forty years of the Government, "there were, outside of the Cabinet, only eighty-two removals from office," and "all of these removals were, or were alleged to be, for cause." It was not until forty years after the adoption of the Constitution, when the generation whose work it was had died, that Jackson, with that ferocious vulgarity which, as Bishop Potter has said, marked his ideas of politics, made the first "clean sweep." To justify it, the ingenuity of Van Buren, Marcy, and Silas Wright was called into play, and these statesmen for this purpose produced what they pretended was the old, but what was really the entirely new, theory of "rotation." Real Americans, they insisted, had always believed in rotation in office, cunningly perverting the use of the term from elective to administrative offices. Mr. Whitridge shows further the curious fact that these politicians got their teaching in government, not where they pretended to find it, in the school of Jefferson, but in the degraded politics of this State, where the old "council of appointment" had for more than forty years carried on the whole administration of the State on the spoils system. New Yorkers who sigh over the condition of the civil service at Washington, have food for reflection in the fact that it was from the festering corruption of their own State that the virus was transferred which has poisoned the whole body politic. So wholly unknown had the new kind of politics been in the Federal Government that, even as late as 1834, we find Madison expressing the childlike belief that the odium attaching to this abuse of patronage would be sufficient to restrain its exercise.

Mr. Whitridge, having disposed of the pretence that there is something peculiarly "democratic," or consonant with the spirit of our institutions, in "rotation," proceeds to discuss the statute of 1820, which has been one of the most efficient aids in popularizing the new system. This statute makes the terms of some four thousand officials, and those generally of high rank, come to an end in four years, instead of lasting during good behavior. Like so many other things connected with rotation in office, the statute was itself a sham. It was avowedly passed to secure a higher degree of accountability in these officers. It is plain enough that any employer who would expect to get more perfect accountability by telling his clerks that, faithful or not, no clerk could hold his place for more than four years, would be deemed a little cracked. Of course this was not the real reason. The real reason was, according to John Quincy Adams, to promote the election of W. H. Crawford as President of the United States in 1825: "It was drawn up by Mr. Crawford, as he himself told me. It was introduced into the Senate by Mahlon Dickerson of New Jersey, then one of his devoted partisans; and its design was to secure for Mr. Crawford the influence of all the incumbents in office, at the peril of displacement, and of five or ten times an equal number of ravenous office-seekers, eager to supplant them." What is more, the plan very nearly succeeded.

There were still a few of the earlier generation of statesmen lagging superfluous on the stage, and again, curiously enough, when we think how commonly the principle of rotation is supposed to be a doctrine of Jeffersonian Democracy, among the first to denounce the law was Jefferson himself. A few months after the passage of the act, he made the following remarkable prophecy, which entitles us to quote him as one of the most far-sighted of the enemies of the spoils system:

"It saps the constitutional and salutary functions of the President, and introduces a principle of intrigue and corruption which will soon leaven the mass not only of Senators, but of citizens. It is more baneful than the attempt, which failed in the beginning of the Government, to make all officers irremovable but with the consent of the Senate. This places, every four years, all appointments under their power, and even obliges them to act on any one nomination. It will keep in constant excitement all the hungry cormorants of office; render them, as well as those in place, sycophants to their Senators; engage these in eternal intrigue to turn out one and put in another, in cabals to swap work, and make of them [*i. e.*, the Senators] *what all executive directories become, mere sinks of corruption and faction.*"

Madison, to whom this was written, thought the law full of just this mischief, and, further, that it was an unconstitutional encroachment on the Executive. What the effect of the law has been, every one knows. Not only has it introduced a four-years' term in the principal executive offices, but has produced a custom and a way of thinking which has virtually made all offices four-year offices. Outside the judiciary, there is no such thing as tenure during good behavior in the United States.

It has been noticed that the object of the act was to give Crawford plenty of henchmen to help him to an election as President. It was actually used by Jackson to strengthen the Executive. The early effect of the "clean sweep" was to make the President a more powerful figure than he had hitherto been in the American system. Jackson made himself for the time being a kind of despot. By turning out officials who had no particular motive to help him, and filling their places with stanch personal adherents, he made the little civil service of his time a personal bodyguard, and was able to give effect to his own violent will in a way that had before seemed impossible. Accordingly, at first, the Senate itself revolted at the tyrannous abuse of Executive power it had authorized. In 1825 a select committee reported unanimously a bill to repeal the act, on the express ground that it gave the President too much power. In 1835 a repealing act passed the Senate by a vote of nearly two to one. Clay, Benton, Webster, Calhoun, Ewing, and Southard all insisted on the repeal of the act for the reasons we have mentioned, and which are more cogent now than they were then.

Mr. Whitridge's object is to expose the nature of the humbug which keeps alive the four-year principle, and to this he confines himself; but his article suggests much besides what it says—among other things, that one marked result of rotation has been to shift the seat of the abuse, since Jackson's time, exactly as Jefferson foresaw that it would, from the Executive to the Legislature. As the civil service grew in size, it became more and more difficult for the President to manage the "clean sweep" himself, or to put his own henchmen in every little post-office and marshalship. He soon found that he had to select his appointees from those recommended by the local party authorities, who were necessarily members of the House or Senate. As the Senate also had the confirming power, the control of the civil service soon began to slip away from the President. Of recent years every President at the outset of his term has been confronted with a problem which no President has yet solved. He has come into office with a desire to regain his constitutional control over appointments. He has been at once confronted by cabals or coalitions of managers, largely recruited from the Senate and House, determined to allow him to do nothing whatever, unless he sends in the names of appointees satisfactory to "the party"—*i. e.*, to themselves. In Grant's time they went so far that not only did Conkling absolutely direct whatever was to be done in New York, but a "Senatorial Group" made its appearance, which practically put the President's office into commission, and invented the third-term project, in order to introduce not a Presidential Cæsarism, but a species of Senatorial boss-rule, with poor Cæsar for a puppet. Nothing was more remarkable in Grant's career than his gradual reduction from the proportions of a popular hero waging war on politicians as the people's enemies, to that of an apparently brainless automaton, worked by a cabal of powerful political intriguers. Hayes made a feeble effort to assert his independence, but never was able to convince the world of it; Garfield was assassinated by a criminal whose crazy rage was excited by the spectacle of a President breaking away even a little from those who regarded themselves as his owners. Arthur, always doing what was easiest at the time, and never attempting much more than to trim his sails to the wind, did not allow the problem to trouble him.

Finally Cleveland, who went into office with a sincere determination not only to reform the civil service, but to restore the President's authority over it, found that a great measure of control of the patronage by members of the Senate and House—that is, by "the party"—was the *sine qua non* of his being allowed to do anything in any other direction.

If these tendencies were to go on unchecked, we should ultimately have, as Jefferson foresaw, not an executive tyrant, but a poor miserable executive puppet, directed by the hands of a powerful Senatorial or legislative directory. Going on as we are, the time would come, and not be long in coming (it was actually threatened at the end of the last campaign), when a sort of permanent party committee on patronage would establish itself in Washington, consisting of such men as Quay and Platt, who would be the centre of all power—not only executive, but legislative.

From this fate there is no way in which the Presidency can be saved except the restoration of its constitutional prerogative through a tenure of administrative offices during good behavior. Mr. Harrison's plan of taking his nominations here from a State delegation, there from a Senatorial boss, and here from one faction, and there from another, may produce a fine state of intestine discord or party paralysis, but nothing more. The Presidency cannot be a real executive office as long as the civil service is in great measure controlled by the legislature, towards which Federal politics is drifting. The goal is what Jefferson was accustomed to think of as government by a directory—what we know as government by a ring.

FREEDOM OF THEOLOGICAL TEACHING.

When a man sets forth on the sea of religious controversy, he never can tell where he will fetch up, as the prolonged discussion between Prof. Huxley and his various antagonists in the *Nineteenth Century* clearly shows. The original issue must have been forgotten by the disputants themselves by this time, to say nothing of their readers. As often happens, too, a question not in sight when the controversy began, has come to have an importance and to awaken an interest greater than that of the primary dispute. Such seems to us the question of freedom in theological instruction broached in the discussion referred to. Prof. Huxley took occasion to remark that Germany and Holland were the only countries where professors of theology could feel free to "follow the argument," as Socrates used to say, unfettered by adhesion to certain conclusions beforehand. This was resented with considerable heat by Dr. Wace, who saw in it a charge of mercenary motives. Prof. Huxley thereupon disclaimed any personal imputation, but deliberately reaffirmed, after his manner as the great *malleus orthodoxorum*, that the system of binding instructors in theology to a creed was a bad one, tending at once to repress original investigation and to crush original investigators.

We think that Dr. Wace and other teachers of theology are perfectly justified in refusing to have their chairs of instruction compared with professorships of science. Theological seminaries are not founded to investigate. Professors of theology are not expected to form a creed for themselves and their pupils, but to expound that of the church which endowed their chairs for the express purpose of having its creed taught. It is not often that provisions of the charter call for this so explicitly as the Andover statutes, but it is called for just as really in the case of all other denominational seminaries. What the churches want is teachers to train young men to recruit their ministry. They appoint and pay professors in their theological schools precisely for the purpose of teaching what the church holds. The churches are not conscious of imposing fetters on the professors, and the professors are almost never conscious of wearing fetters. They generally take up their work as men of mature years, beyond the era of life when the infection of theological novelty is possible, and are perfectly content to go on in the old ways because they believe them to be the best ways. It is only natural, then, that they should be indignant at any hint that, if they could get their salaries just as well, they would hold other views.

Exception ought, perhaps, to be made of some of the more recently founded chairs in the theological seminaries of this country. To keep up with the great development of Oriental studies, several professorships or adjunct professorships have been established in different institutions, and their object involves, of course, continued historical and critical research. It is research, too, in a province comparatively new to the theologian, where he cannot tell beforehand what facts he will come upon. Hence it has more than once happened that when an occupant of such a chair has felt it to be his duty to report the facts as he found them, without attempting to reconcile them with the teaching of his colleagues, the latter have been greatly scandalized. It is a curious thing that it is almost always those professors whose work is nearest like scientific investigation, against whom suspicion of theological unsoundness is directed, and who are looked upon as disturbers of the peace of the churches. We scarce ever hear a rumor that a professor of "Polemical Theology" is "off color" theologically. He lets fly his apostolic blows and knocks to prove himself orthodox, as in old time; it is the teachers of Hebrew and Greek, instructors in Egyptology and Assyriology, who are oftenest charged with the awful crime of German Rationalism. But this, of course, simply proves what we said, that theological seminaries are not intended for investigation, and that it was a mistake of Prof. Huxley to speak of professors in them as if they were mere scientific inquirers, not knowing how the discoveries of to-morrow might change the belief of to-day.

As to the main question, whether our system of theological instruction ought to be as free as the German, it is clear that it never will be so until we have a State Church. It is to the State and not to the Church that the German professors of theology are answerable, and it is for that reason that they have freedom of instruction. The principle was laid down long ago by Frederick William III., in reply to those who were accusing Fichte of being an atheist: "It is not the business of the State to give a decision in reference to his religious principles." And the present Emperor was free to appoint Harnack to the chair of history in Berlin, in the teeth of the remonstrances of the orthodox Lutherans. Such a state of things in the religious affairs of this country cannot be imagined. The nearest we come to it, or probably ever will come to it, is the freedom from denominational obligations enjoyed by professors in our State universities. Prof. Ely has recently borne testimony to the high value placed upon this by the younger teachers of the country, and to their hope that nothing will occur to abridge it. But, of course, no State university can have a school of theology—unless a type of "mediation theology" can be devised more wonderfully non-committal than anything ever invented in Germany.

It is not necessary for us, however, to envy the Germans their freedom of theological teaching, for we have enough of it ourselves. President Patton, we believe, has remarked that the seminary never can undo the work of the college; and, though he spoke in warning lest theological unsoundness should creep into colleges, his saying suggests the great and widening influence for freedom of thought exercised by the leading colleges. And the leading colleges are those which have outgrown denominational limitations. No strictly denominational college has great promise for the future. There is every reason to expect freedom of collegiate teaching to increase from year to year, and this really means, as President Patton says, increased freedom of theological teaching. The teaching, too, which students of theology get from their own reading—far and away the best teaching they have—must always be free until some form of intellectual protection is devised to bar out the product of the foreigner; and, even if that were done, we have not a few domestic rivals of the foreign producer who might more than make good the deficit by their stimulated activity.

ENGLISH "STEAMSHIP SUBSIDIES."

We have received several letters inquiring what sums the British Government is paying in the way of "steamship subsidies." In order to furnish a correct answer, we addressed a letter to the Treasury of the United Kingdom requesting information upon this point. We have received an answer under date of June 5, 1889, from which it appears that the total cost of carrying the foreign mails of the United Kingdom, which is called, in official parlance, the Post-office Packet Service, is £498,764, or about $2,500,000. The details are as follows:

EUROPE.	Year 1888-89.
Dover and Calais	£13,200
Dover and Ostend	4,500
Total for conveyance of mails, Europe	£17,700

AMERICA.	
United Kingdom to United States	£85,000
New York and Bermuda	300
United Kingdom and West Indies	90,250
Belize and New Orleans	1,600
Newfoundland	4,000
Liverpool to Callao	11,500
Liverpool to West Indies and Mexico	1,100
Southampton to Brazil, and River Plate	5,500
Panama to Valparaiso	3,500
	£202,750
Deduct estimated amount of penalties	50
Total for conveyance of mails, America	£202,700
AFRICA.	
United Kingdom and West Coast of Africa	£9,500
United Kingdom and St. Helena and Ascension	4,474
	£13,974
Deduct estimated amount of penalties	50
Total for conveyance of mails, Africa	£13,924
INDIA, CHINA, AND AUSTRALIA.	
Between Brindisi and Bombay (via Suez Canal), calling at Aden; Between Brindisi and Shanghai (via Suez Canal), calling at Aden, Colombo, Penang, Singapore, and Hong Kong	£265,000
Between Brindisi and Adelaide and between Naples and Adelaide (via Suez Canal)	170,000
	£435,000
Deduct estimated amount of penalties	200
Total for conveyance of mails, India, China, and Australia	£434,800
RECAPITULATION.	
Europe	£17,700
America	202,700
Africa	13,924
Asia and Australia	434,800
	£669,124
Less repaid by Colonies:	
West Indies £22,360	
East Indies 63,000	
Australia 75,000	160,360
Net payment by the Imperial Government for foreign post-office packet service	£498,764

That these payments to steamship lines are simply for services rendered, being exactly like the payments to railway and stage lines for carrying the mails, is made plain by two facts. In the first place, bids for the service are advertised, and they are not restricted to British lines. The lowest bid is accepted invariably without regard to the nationality of the competing lines. Again, the British postal service, foreign and domestic, yields a net revenue of about £3,000,000, the receipts being about £8,000,000 and the expenditures about £5,000,000. The domestic telegraph service is included in these figures, the receipts from which are about equal to the expenses. The post-office is a business department of the Government, of which the foreign-packet service is a branch, and this service is procured on the same terms and conditions as the domestic. It has nothing of the character of a subsidy. It is presumed that the foreign service pays for itself in the postages collected. Certainly the European and American branches more than pay their way. Possibly the East Indian service may show a loss; but if so, it is analogous to our far Western service, where distances are great, expenses heavy, and receipts small.

There is no point of similarity between the English packet service and the proposed subsidies to shipping in this country. In the one a payment is made on the principles of competition and the open market for carrying the mails, the Government being reimbursed by the postage money collected; in the other a bounty is proposed on the basis of mileage sailed. In the former the definite end to be reached is the carrying of letters; in the latter the definite end is the sailing of the ship, or, as the friends of the measure most commonly say, the "carrying of the flag." Their idea is, that if the flag is carried around the world at Government expense, commerce will "follow the flag." Commerce will do nothing of the kind. Commerce will follow the dollar wherever it is to be found, quite regardless of bunting. The flag goes to the North pole sometimes, but commerce never follows it thither. Commerce goes to Liverpool, Havre, Bremen, and Hamburg whether the flag goes there or not.

But it may be said that Great Britain has arrived at her present stage of postal efficiency and postal solvency by subsidies paid in the past, and that she would never have been able to make ends meet in her foreign packet service without a long course of bounties. This may be true, but it does not follow that we, in the year 1889, should begin where England was in 1849. In 1849 it cost a great deal more to run steamships than it now costs, while the receipts were much smaller. There has been a steady lessening of the cost on the one side, and an increase of gain on the other, ever since. We stand to-day on as good a footing as any other country, except for our antiquated navigation laws and our antiquated tariff laws—the one forbidding us to buy ships where they can be got cheapest, and the other crippling commerce by saddling the return cargo with enormous and unnecessary duties.

ENGLISH GUILDS AS IRISH LANDLORDS.

DUBLIN, June 7.

IN the year 1611 James the First granted the greater part of the County of Derry to the Corporation of London, which undertook to colonize it with English and Scotch Protestant settlers. The motives of the plantation were partly political and partly commercial. Great benefit was expected to ensue from the exchange of London manufactured goods for the produce of this fertile country, which, wrote James, "yieldeth store of all necessary for man's sustenance in such measure as may not only maintain itself, but also furnish the city of London yearly with manifold provision." The rapid increase in the population of London was at that time considered dangerous; there were many persons whom "the city could conveniently spare," and so ease itself of "an unsupportable burden, which so surchargeth all the parts of the city that one tradesman can scarce live by another." The city was bound to plant settlers of specified classes within a limited time, to give them "certain estates" "at no uncertain rents," to establish and maintain towns, markets, schools, and churches.

This grant, revoked for breach of its conditions, was renewed by Cromwell and confirmed by Charles II. The ownership of this vast territory thus became vested in a committee of the London corporation known thenceforth as the Irish Society, an ever-changing body, twenty-four in number, half of whom retire each year and cannot be reëlected. The Irish Society divided their estate among the twelve great companies, mercers, grocers, drapers, fishmongers, goldsmiths, skinners, merchant tailors, haberdashers, salters, ironmongers, vintners, clothworkers, reserving to itself the cities of Derry and Coleraine, the woods and fishing.

For more than two hundred years the revenues allotted by the original grants for the municipal purposes of Derry and Coleraine were misapplied, squandered, and embezzled. Up to the present day no by-law of these municipalities is valid until confirmed by the Irish Society at Guildhall. About thirty years ago two Royal Commissions reported that there was neither pretext nor argument for continuing this municipal supremacy, and recommended the dissolution of the Irish Society. Examination of receipts from the property retained by the Irish Society amounting to £219,898, showed the following expenditure: Tavern expenses, £7,412; fees to members, £12,985; law expenses, £36,821; incidental expenses, £18,077. A committee of the citizens of Derry came to the conclusion that the accounts were falsified so as to conceal more unjustifiable outlays.

The Irish Society was the owner of the greater part of the ground on which Derry and Coleraine are built. As landlords, and with authority paramount over the corporations of these towns, their supremacy was complete. The companies who, as grantees of the Irish Society, took their several proportions on the same trusts and subject to the same conditions as those of the original grant, neither observed the conditions nor performed any of the duties of landlords. Until very recent times they sublet their estates as a whole to middlemen, to whom the occupiers were tenants at will, rackrented to the uttermost. Robert Slade, Secretary to the Irish Society, travelled through Derry in 1802, and published a journal, which was afterwards suppressed, of his observations. The object of the Irish Society's charter being the encouragement of a Protestant colony, he was particularly indignant at the treatment the Protestant tenants received. Excessive rents had caused wholesale emigration of the very people whom it was the duty of the city, under their charter, to protect, preserve, and settle with certain estates on the soil. "This rent-raising," he said, "leads me to question the policy, I might say the justice, of the city companies, in letting their land on payment of heavy fines, without stipulating for the performance of the relative duties between landlord and tenant." The increase of rent imposed by the lessee of the clothworkers' estate on his tenants "produced," says Slade, "an almost total emigration among them to America, where they formed a principal part of that undisciplined body which brought about the surrender of the British army at Saratoga."

It is unnecessary to consult hostile opinion as to the management of their estates by the London companies. Deputations of the Irish Society visited the city estates from time to time, and reported that schools, churches, and charitable institutions were non-existent or neglected; the property was "treated as merchandise"; the middlemen "made the most of it during their leases"; "nothing was done to improve the estates, or for the comfort and amelioration of the occupiers"; "gross mismanagement and neglect" existed: the tenants "were made to pay very high rents, and the cotters lived in perfect hovels." These reports were discontinued after 1841, from which date many of the companies obtained control of their estates by lapse of the middlemen's leases. Rapacity and neglect, however, still continued. The companies set their faces against tenant right, increased rents upon the tenants' outlay, refused to grant building leases, and, after the Land Act of 1870, claimed a customary right to increase the rent at the end of every twenty-one years. In 1854 rents in the town on the salters' estate were trebled, and in 1867 a number of rents were again doubled. The inhabitants complained that they were "driven to distraction."

Between 1870 and 1880 the mercers, drapers, skinners, and fishmongers raised their rents,

and defeated the tenants' attempts to avail themselves of the supposed advantages of the first Land Act. Some of the companies had sold their estates before this time; but in 1880 the annual value of the London estates in Derry amounted to over $400,000. A Royal Commission in 1880 reported that the property of these guilds was of a public character, and not applicable to private purposes such as banquets and fees to members. Their available income from English and Irish estates is about $2,200,000, and the actual expenditure is roughly classified thus:

Public and benevolent objects	$750,000
Banquets	500,000
Management and fees to members	500,000
Rates, taxes, and repairs	375,000

The report of the Royal Commission in 1880 gave occasion for the remark that the Guild dinners would be followed by their desserts, but no legislative action has yet been taken. Meantime the companies still retaining estates in Ireland are taking advantage of the Purchase Acts to sell to their tenants, and are thus transferring the proceeds of property, expressly granted for Irish public purposes, to England.

These wealthy and powerful corporations have always posed as model landlords, and yet, with the exception of scanty doles to clergy, schools, and some local institutions, they have spent absolutely nothing on promoting the comfort of their tenants, or improving their farms, while they consistently claimed every right the letter of the law gave them to raise rents and confiscate the improvements of their tenantry. They paid their agents liberally, and gave plenty of work to their solicitors, but otherwise the revenues raised in Ireland have been spent in England, to a large extent, in gluttonous eating and drinking, and in fees improperly distributed among their members. Their profuse hospitality to politicians and public men of every shade of opinion has covered many of their iniquities and averted many threatened inquisitions into their affairs.

In the process of disposal of their estates, it has just come to light that one of the wealthiest of these companies, the drapers, has employed means to effect a sale to their tenants which, in the case of a private owner, would expose him to universal condemnation, if not to criminal proceedings for intimidation. From correspondence recently published, and questions asked but not yet fully answered in Parliament, it appears that this company entered into negotiations for the sale of their estate, which extends to 27,000 acres. In 1880 the then agent reported that there were smaller arrears of rent on this than on the estate of any other company, but, in consequence of the adverse seasons and low prices since prevalent, many of the tenants owed several years' rent in 1888. To give point to their negotiations, as the tenants' offer was less than the company's demand, the latter served ejectments wholesale; the tenants' stock and goods were seized, and the sheriff, with a large force of police, bailiffs, and siege apparatus, attended to take possession of the farms. These proceedings were stayed on the tenants' executing agreements to buy at the prices in excess of those they originally refused by the addition of the rent and costs due. These agreements, signed at the bayonet's point, concealed the fact that judicial rents had been fixed by the county court judge; the old and higher rents were stated as the legal rents on the face of these agreements, for the purpose, apparently, of making the price seem to be a smaller number of "years' purchase" on the rent than if the legal rents had been expressed, as they should have been.

Intimidation, undue influence, and duress were thus employed to extort the execution of contracts which are supposed to be matters of voluntary arrangement, and the contracts drawn up by the company's solicitors—the tenants having no professional advice—if not actually fraudulent in the concealment of material facts, were certainly misleading. Even Mr. Balfour has gone so far as to admit in the House of Commons that the company's action was "discreditable." Mr. T. Healy has asked that the company shall be prosecuted; but as a thoroughly conservative solidarity exists among these powerful and wealthy corporations, it is unlikely that the Government will countenance any legal proceedings against them, and none could be undertaken except at the instance of the Government.

This incident may, however, lead to an early consideration of the trusts under which these companies hold their Irish estates. Although the force of public opinion has, during the last five years, led the city guilds to spend less on dinners and fees to their members, and more upon objects of acknowledged public utility, nothing has been done to restrain them from spending their Irish incomes in England, and from throwing the proceeds of their Irish sales into hotchpot with their English property. A just appropriation of this guild property, whenever Parliament takes up the matter effectively, would require that the value of the Irish property in its original extent should be allocated to Irish public purposes. The Irish party have up to this shown great supineness on this question, but, in the hands of Mr. Timothy Healy, a new departure may be expected.

AN IRISHMAN.

POLITICS AND THE EXPOSITION.

PARIS, June 13, 1889.

THE Exposition continues to be the all-absorbing topic of interest; the number of visitors increases constantly; on the 10th of June (Whitsuntide Monday) there were as many as 353,000. Curiously enough, the doors of the Exhibition are surrounded with boys and women who offer to you tickets at half-price The regular price is one franc in the daytime, but these tickets have been thrown on the market in such abundance that they have gradually fallen to fifty centimes. There was a sort of lottery made to cover the expenses of the Exhibition: 1,200,000 lottery tickets were issued and subscribed for at the price of 25 francs, each bearing twenty-five common tickets of entrance to the Exhibition. Most of the subscribers have merely kept the body of the bond, which gives them the chance to get a large prize when the drawings of the lottery take place, and have disposed at almost any price of the twenty-five tickets which were joined to the bond. Thus it is that the speculators have thrown on Paris 30,000,000 tickets of entrance to the Exhibition, or at least a large proportion of that number, and it will be a long time before they are absorbed and the entrance to the Exhibition comes back to its normal price. The spirit of speculation has entered everywhere. You can hardly find a person who has not bought one of the bonds I mention, and sometimes at a premium, with the hope of getting one of the prizes of 200,000 francs which have been promised to the public. The lottery used to be a public institution in France, as it is still in Italy; it was abolished in 1830, and is now forbidden in principle, but *de facto* the Government can authorize a lottery when it has a charitable object, and the number of authorized lotteries is increasing every day. You can hardly enter a tobacco-shop without seeing lottery-tickets for sale. The Exhibition lottery was authorized by the State, and it has at least had the advantage of furnishing the funds necessary to the Exhibition.

Day after day some new attraction is added to the great show in the Champ de Mars and the Place des Invalides; every train brings more strangers, the hotels are crowded, the boulevards are teeming with people, and, at night, under the electric lamps, thousands of visitors are seen sitting in front of the cafés in the open air. Wherever you go, you find a crowd. The restaurants and the theatres complained at first that the Exhibition drew away all their customers, and even had the impertinence to ask that the Exhibition should be shut at night at least three times a week. They do not complain any more. I went to the Français a few days ago to see Mounet-Sully in *Hamlet* (a more admirable and poetical *Hamlet* it is difficult to imagine), and every seat was taken; the audience, which was almost exclusively composed of foreigners, showed a degree of enthusiasm not often exhibited by Parisians. Go where you like, to the races, to Buffalo Bill's, to the reviews of our gymnastic societies, to the Exhibition, you find crowds everywhere; the population seems to multiply itself and to have a sort of ubiquity.

In the midst of all this confusion and excitement, politics seems quite lost sight of. The Chamber was almost forgotten, as well as the High Senatorial Court of Justice, which is looking into the Boulangist conspiracy, till, a few days ago, some new arrests were made, houses searched, and trunks seized, containing, it is said, 30,000 letters and cards received by General Boulanger. It seems very much as if the Government wished to drag the inquest along so as to gain time and to avoid a trial during what may be called the golden days of the Exhibition. Boulanger himself is in London, and seems to be as quiet there as he was active and restless in France. I was in England a few days ago, and my English friends all agreed that his attitude was that of great reserve: he did not force himself on public attention; he was received by a few people, but he did not allow journalists to interview him, he did not make long speeches, and, whenever he dined out, he surprised the company more by his silence than by his sayings. His lieutenants here are not so quiet. They are probably discouraged, but they continue to assume an air of great confidence, and keep up the *feu sacré* as well as they can. Some days ago they were to hold a public meeting and have a banquet at Angoulême; but when they arrived in that town, they found a large military force in front of the railway station, and, after some remarks made by one of them to a commissary of police, they were all taken to the prison of Angoulême, where they were kept a few days. One of them was a deputy, M. Laguerre, who thought he should be covered by his parliamentary immunities, but who found that M. Constans, the present Home Minister, did not respect these immunities so long as he had a majority at his back. When M. Laguerre, in prison, made his protest, he was told that he would be set free if he would promise not to appear and speak at the banquet which had been announced.

It is rather curious to recall in this circumstance the famous banquet which was the cause of the Revolution of 1848, and to find the men who made a revolution in order to assure the right of public meeting, now opposing military force and all the power of the State to a few men who wish to hold a banquet in the distant and quiet city of Angoulême. An interpellation was made yesterday in the Cham-

ber on this subject, but the Minister, M. Constans, came forward, and proudly said: "Ipse adsum qui feci." He took a bold attitude: he was not going, he said, to *tolerate* any agitation in the country; he would not have a few men going about creating an unnecessary excitement in departments to which they did not belong. This promises well for the liberty of the next elections. Constans has been Governor of Cochinchina, and has learned in Asia the rules of a free government. Under public pressure, M. Laguerre and his associates have been allowed to leave their prison till the day of their trial; but it is clear that M. Constans and the prefects who received his orders have adopted a policy of intimidation. All parties in France invoke liberty as long as they are in opposition, and show their contempt for it when they are in power.

If France seems to have become indifferent to the incidents of domestic politics, she is even more so with regard to foreign affairs. It may be said that the great mass of the electoral body ignores what is going on beyond the frontier; it does not care for the journey of the King of Italy and of Crispi to Berlin—for the details of the military convention signed between Prussia and Italy, which is said to have reinforced the alliance between the two countries—for the attitude of the English Cabinet in face of the triple alliance of Prussia, Austria, and Italy. The incidents of the political life of the new principalities and kingdoms leave our public absolutely indifferent, or are only regarded on what may be called their dramatic side. There is but one sentiment which, rightly or wrongly, has pervaded the public mind, a sentiment which is spontaneous and ineradicable: it is a belief in a necessary, a fatal combination of the forces of Republican France and of autocratic Russia against the forces of Germany. Every utterance of the Emperor of Russia, in this respect, has its importance; and when, the other day, he said that his only faithful ally was the Prince of Montenegro, there was a thrill of satisfaction all through the country. This indirect denunciation of the great continental Powers, this bold assumption of Russia's independence, her content with the alliance of a poor little mountainous principality, which can only bring a few thousand men in the field—was not this an indirect promise made to France, an indirect hope extended to her, an indirect protest against the influences which are paramount in the constellation of Prussia, Austria, and Italy? It would be difficult to convince an average Frenchman that this indirect promise may be illusive, that France cannot count, in the last analysis, in case of a new war with Germany, on the support of Russia. In vain will you tell him that there is no treaty of alliance between the French Republic and St. Petersburg, that the nature of the Republican Constitution makes a secret alliance an impossibility. He will tell you that no signed document is necessary, that the interests of France and Russia are common, and that the two countries must be found together in the next European struggle.

History has many lessons which are not always understood. Prussia and Russia may be, or may appear at times, very inimical; their mutual relations may not be wrongly expressed by the verses which Catullus wrote for his mistress:

> "Odi et amo; quare id faciam, fortasse requiris.
> Nescio! sed fieri sentio et excrucior."

The two great empires of the north have combined more than they have separated their action. If the worst came to the worst, if Germany felt the pressure of a great danger, she could give Russia satisfaction which it would be difficult for France to give: she could, in the last analysis, show her the way to Constantinople, and oblige Austria to come to a settlement with Russia in the peninsula of the Balkans. A partition of Turkey, similar to the old partition of Poland, is always possible. The interests of Russia can be satisfied in a thousand ways in the East, she can obtain free access to the Mediterranean; her ambition can find many channels, and her present sullen attitude is not owing to any platonic love for France, but merely to the discontent created by the Treaty of Berlin.

Such reasonings, however, have no force here; and, what with the success of the Exposition, the lull in domestic politics, and our absolute belief in the sympathies of Russia, we are resolved to be optimists—as long, at least, as possible.

Correspondence.

WASHINGTON'S PEDIGREE.

To the Editor of The Nation:

Sir: The public interest in everything concerning Washington is my excuse for troubling you with a few words about his pedigree. All genealogists are aware of two facts—first, that Sir Isaac Heard, Garter King of Arms, in 1791 supposed that he had traced George Washington's ancestry; second, that the late Col. Joseph L. Chester in 1866 entirely disproved this affiliation on the essential point of the identification of the emigrants with any of the persons recorded in the English pedigree. Since then the problem has remained unsolved, although Col. Chester was most persistent in collecting all the data recoverable in regard to all of the name.

I am now most happy to say that Mr. Henry F. Waters, who has succeeded Col. Chester in the honorable position of the best investigator of American pedigrees in England, has discovered a very promising clue as to the parentage of Laurence and John Washington, the emigrants to Virginia. As Mr. Waters's results are to be published in the *New England Historical and Genealogical Register*, I can only state now that he has found a Laurence Washington who had sons Laurence, baptized 1635, John (baptism not recorded), and William, baptized 1641. There is positive evidence to identify the son Laurence with the Virginian colonist who died in 1676. Mr. Waters's brilliant success in tracing out the family of the Rev. John Harvard, to say nothing of the less distinguished pedigrees which he has traced, is the best proof that he will follow up and amplify this initial discovery.

But now is the time, in furtherance of his work in England, to show clearly what is known of the Washingtons in America, especially in the first generation, and therein I ask for your assistance.

Sir Isaac Heard identified the emigrants with John and Laurence, sons of Laurence W. of Sulgrave and Brington. Col. Chester proved that this John was knighted in 1623, twice married, and that his widow, Dorothy, died in 1678—all facts entirely incompatible with his being the emigrant to Virginia. His brother Laurence, born in 1602, was made Rector of Purleigh in Essex in 1633, ejected as a Royalist, and afterwards allowed to hold a poor living. His later history had not been traced by Col. Chester. Although the old error has at times shown vitality since, it may be accepted as a fixed fact that the emigrants were *not* these sons of Laurence of Sulgrave.

In 1872 the late Albert Welles published a pretentious 'Washington Genealogy,' tracing the emigrants to Leonard Washington of Warton. This affiliation was presumably a rank forgery, as no authorities were given, and the records at Warton do not mention any such children.

Col. Chester wrote me in 1879 that he had an old deed which he presumed was signed by John Washington, the emigrant, but he needed an American example of his signature for comparison.

Bishop Meade, in his admirable book on the 'Old Churches and Families of Virginia,' in 1857, vol. i, 167, states that the will of Laurence Washington was then at Tappahannock, the county-seat of Essex County. This will is printed in full in Welles's book. Meade also states that the original will of John Washington, of which he gives an abstract, was then on record at Westmoreland Court-house, "in an old book of wills, though in a somewhat mutilated form."

By the kindness of R. A. Brock, Esq., of Richmond, the highest living authority on Virginian genealogies, I learn that this will is no longer on file. This confirms the unpleasant rumor that this document disappeared during the late civil war. I therefore appeal to your readers to assist us by calling attention to the great importance of the recovery of this document, believing that it cannot have been destroyed, and may have fallen into the hands of those who are simply ignorant of the value of the paper beyond a mere curiosity. I also hope that some of your readers will take the trouble to inform us in detail of what took place in Westmoreland County during the war, what troops occupied the Court-house, and what other damage, if any, was inflicted there.

In the same connection I would state that in the *Historical Magazine* for 1867, pages 29 and 30, Mr. Dawson printed a document furnished by M. M. Jones, Esq., of Utica, N. Y. It was a copy made by him in 1862 at Annapolis, from the Colonial Records there. I hope some one will examine and report if the papers still exist there, and that search will be made for the letter of John Washington, dated September 30, 1659. This letter has been cited as a proof that John came over in Edward Prescott's ship in 1658. A careful reading makes it doubtful that Washington was anything more than an active complainant in the matter.

I remain yours very respectfully,

William H. Whitmore.

Boston, Mass., P. O. Box 3478.

GROUPING BY PARTIES VS. GROUPING BY OFFICES.

To the Editor of The Nation:

Sir: In your issue of the 13th inst., you refer with approval to a suggested amendment to the Connecticut Ballot Bill, allowing the grouping of candidates under party names upon the official ballots. The practical difference between the system of printing the whole ticket of each party in a group by itself, and that of grouping the names of all candidates for each office under the title of that office, is that the former makes it easier to vote a "straight" ticket than a "split" one. In regard to this you say:

"There is no objection to the grouping by parties. Such arrangement may aid the ignorant voters in marking their ballots, and will certainly diminish the chances of confusion and delay in putting the new system into practice."

In your issue of April 25, "J. H. W.," in his letter about the Rhines vote-recording ma-

chine, objected to the system of grouping by parties, as fostering blind adherence to party candidates by practically inviting the voter to vote a straight ticket. While fully agreeing with him, I think that even a more fundamental objection may be made. The Constitutions of Arkansas, Delaware, Illinois, Indiana, Kentucky, Massachusetts, New Hampshire, Oregon, Pennsylvania, and Tennessee require that elections shall be equal, and this equality is obviously so essential that it may probably be considered a part of the common law of all the States. This cannot be merely an equality as regards the voters; the candidates also must stand on equal terms, for the rights of voters and candidates are clearly correlative. My objection to the system of grouping by parties is simply that it violates this equality. The Constitutions of these ten States know nothing of straight tickets and give them no privileges. If I choose to vote for candidates of different parties, or representing different bodies of citizens, I have in Pennsylvania a constitutional right to do so with exactly the same ease and facility with which my neighbor votes his straight ticket, and I believe I should have a natural right to do so anywhere. The Legislature has no right to make me pick out my candidates from all parts of the ticket and mark each name separately, when my neighbor can exercise his full right of suffrage by a simple mark against the party title or even by marking every name in one single group. There are very few things in which the law does or can require equality, but an election is such a thing; and so long as practical equality can be secured, there is no reason why it should be surrendered in the smallest degree.

This inequality of party men and independents may seem trifling, but it is just such trifles that turn the scale in an election. It may be infinitesimal as regards each individual vote, but collectively it puts at a great disadvantage all candidates whose strength lies in the facility of independent voting. Human nature being what it is, thousands of voters are certain to vote the easiest way; and just so long as the party way is the easiest, we may expect to see elections carried on strict party lines, and to have candidates of the leading parties gain additional strength on that account. A system which encourages men, as "J. H. W." points out, to vote blindly, works against those candidates whose success depends upon the voters exercising some care, and not voting blindly; and if, under any method of elections, candidates or sets of candidates can receive the votes of their supporters with less trouble to them, even to a trifling extent, than other candidates can, the right of equal elections, which is secured by the constitution in some States, and should be respected in all, is violated both as to candidates and as to voters.

CHARLES C. BINNEY.

PHILADELPHIA, June 17, 1889.

A REMEDY FOR LEGISLATIVE DEGENERACY.

TO THE EDITOR OF THE NATION:

SIR: A perusal of your columns for the last ten years will show an ever-repeated complaint at the gradual degeneration of our legislative bodies. It is asserted that men of real ability will no longer be candidates for State legislatures, or that, if they consent to enter these assemblies, they do so only with a view to the quickest possible promotion into the higher sphere of national politics. As a consequence, these legislatures are said to sink gradually to the low moral and mental level which city councils and county boards throughout the country have long ago reached.

Will you allow me to suggest a possible remedy for this dangerous state of things?

The business of legislative bodies, as at present constituted, is twofold. In the first place, it is legislation proper—that is, the making of statutes of a public and permanent character. This evidently requires men of the highest character, of the widest information, greatest sagacity and experience. It is here precisely that our legislatures fail most signally. The statute-book of every State is encumbered with foolish, mischievous, or inefficient laws. But this is only the smallest portion of the business of a legislative session. The greater part of the work is really of an administrative, not legislative character. It is work of precisely the same nature as that performed by county boards and city councils. It consists of the appropriation of money for the support of public institutions, the adjustment of salaries of State employees, the granting of special privileges, like the building of dams across rivers, and a multitude of other business of a similar description. It will certainly not be claimed that work of this kind requires the same order of talents as the passing of statutes which, in their effect, may change the whole course of development of a State.

Why, then, I should ask, must these two entirely distinct kinds of business be transacted by the same set of men? Why can we not elect an administrative assembly, or whatever you may choose to call it, to meet annually and transact business of an administrative nature, while leaving the legislative function proper to a body of men sitting at longer intervals, say once in five years, and elected for this special purpose? I cannot doubt but that this arrangement would greatly elevate the character of the legislatures, for men of standing and talent would be attracted by the greater dignity attaching to a body rarely meeting, while, on the other hand, the small-bore politicians now swarming in legislative halls would find no room for the exercise of their peculiar talents in the legislature proper. They would strive to secure a seat in the administrative council, where alone they would be enabled to further the special interests each of his constituency—for it is well known that that is the only object the average well-meaning and honest member of a legislature has in view. The corrupt man, also, and his accompanying evil-doer, the lobbyist, would find little or no room for their pernicious activity in the legislature where no "jobs" are to be done and no "deals" to be effected.

There is nothing radical or revolutionary in this scheme. It is merely a further development in the direction which in former times led to the diversification of the legislative, executive, and judicial branches of government.—Respectfully yours,

ERNEST BRUNCKEN.

MILWAUKEE, WIS.

THE PLACING OF GREEK TEMPLES.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* of March 14 contains a letter from Mr. W. J. Stillman in which he asserts that the Greek temples were located rather with reference to defence than to architectural effect. While I have never been in Greece, I am fairly familiar with such of the Sicilian temples as were visible thirteen years ago, and especially with those at Segesta, Selinus, and Agrigentum which he mentions. From my memory of all of them I feel inclined to call his statement in question.

The temples at Selinus might perhaps be cited on both sides of the question, as they stand together on a slight elevation at the head of what was once the harbor, but what is now an alluvial swamp. They are in a commanding situation, which seems to have been reserved for public buildings, and might perhaps have been a citadel; but the beauty of the situation would have justified their position on that ground.

But it is more especially on the temples in the other two cities that I base my argument. Agrigentum, like Lausanne in Switzerland, but unlike any other city with which I am acquainted, is built on one long hillside sloping up about eight feet in one hundred from the Mediterranean, the nearest point of the old city having been about a mile and a half from the sea. The city in its prime was very large, and stretched upward even to the summit of the range of hills, where, indeed, are the ruins of a small temple, but nothing like an acropolis. On the contrary, the great temples, of which there are at least six, were scattered along the low southern edge of the city, the part nearest the sea. The temples of Concord* and of Lacinian Juno were situated close by the wall, on a slight elevation, the scarped face of which forms the wall in that place. This is formed of a crumbling sandstone full of recent shells, and so soft that it can almost be worked with a sharp stick; and besides this, it is honey-combed with tombs. These may of course be of later date than the temples, but the place was never one of very great strength. The temples of Olympian Jupiter and of Castor and Pollux, a little further west, as I recollect them, do not seem any more to have been situated with reference to defence, while the temple of Æsculapius was outside the walls and at a considerable distance from them.

This lowest part of the city can hardly have been chosen for the temples on account of its defensive strength; but, on the other hand, the view of the long series of public buildings standing out in bold relief must have been wonderfully impressive to the stranger approaching the city from its port—especially that of the two temples first named, which, from their position on the low scarped cliff, with no intervening wall, would have been visible down to the stylobate, and would have seemed to have all the added height of the rock. The little eminence on which they stand makes them now equally imposing from above as from below; but it is possible that the upper view may have been partially cut off by buildings.

My own idea concerning these temples is, that they were built in the long interval of prosperity between the death of Theron and the attack of the Carthaginians, when to the luxurious city the idea of danger must have seemed almost as remote as it does to us today. When all the available space in what was doubtless the earliest settlement at the top of the hill had been gradually occupied in the days of the city's early struggles, and the city, grown to greatness, had already stretched far down the hill, these new magnificent public buildings were placed along the southern wall so as best to show forth the splendor of the place.

The temple at Segesta is placed on the summit of a conical hill, which shows no signs of having had other structures on its slopes, and apparently never was inside of the city limits. Although it could have been readily fortified, it must always have been an outpost and not a

* It should be borne in mind that, with the exception of the temple of Olympian Jupiter, the names ascribed to these ruins are fictitious, being given *faute de mieux*.

citadel. The hill adjoining, on which the city is built, does not seem ever to have been so covered with buildings that a temple site could not readily have been found corresponding to the sites at Agrigentum and nearer at hand; but as I remember the majestic way in which this little green hill, rising in an amphitheatre of bare, rugged mountains, is crowned by the solemn harmony of the perfect outlines of this temple of the people's gods, it is as impossible for me to believe that this situation was not chosen for its beauty as that the temple itself was built by chance without a plan. N. J. B.

SYRACUSE, N. Y., June 17, 1889.

THE CENTURY DICTIONARY.

TO THE EDITOR OF THE NATION:

SIR: I am surprised to learn, from Mr. Peirce's very frank letter in your issue of the 20th inst., that some of the definitions of the 'Century Dictionary' which I criticised were his. The contrast which I mentioned between the definitions in mathematics and mathematical physics and those in astronomy and experimental physics I supposed to mark the line between his work and that of some less skilful hand. Still more surprising is it to see him call my strictures on the description of the 'Almagest' of Ptolemy as a "book or collection of problems" "hypercritical." Would he defend a lexicographer who should define the 'Mécanique Céleste' as a collection of mathematical and astronomical problems by Laplace? Yet the description would be fully as correct as that in question.

In the case of the word *alidade*, my objection was directed to the statement that it is an attachment of every instrument for measuring angles. Are the stone piers on which the meridian circles of our great observatories are supported ever called alidades?

The sentence under *Law of action and reaction* which I supposed to be an interpolation is, as Mr. Peirce correctly infers, this: "By *action* is here meant, according to Newton, a quantity measured by the force multiplied into the velocity of the point of application." I think he is entirely mistaken in supposing that Newton gives this definition of the word as used in his statement of the law. I can find no such definition in the 'Principia.'

Since my strictures upon some of the definitions on the 'Century Dictionary' appeared in your issue of the 13th inst., I have hastily glanced through the remainder of the letter A, and noticed the following faulty definitions. The word *approximation* is defined as if it were identical with what is known as the method of successive approximations. The definition of *diurnal arc* is meaningless: "the arc described by the heavenly bodies in consequence of the diurnal rotation of the earth." Of course there is no definite arc thus described, but only an endless repetition of one and the same circle. The term is actually applied to that portion of the sun's apparent daily path which is above the horizon. The same term is, I believe, applied to the apparent paths of the stars above the horizon. *Nocturnal arc* is new to me, but I think its definition also incorrect. *Argus*, the constellation, is omitted, though *Aries* and *Aquarius* are included. S. NEWCOMB.

CONSTITUTIONAL CHANGES IN THE PRESBYTERIAN CHURCH.

TO THE EDITOR OF THE NATION:

SIR: I desire to correct a statement made in your editorial for May 30, 1889, entitled "A Revised Westminster." In the paragraph beginning, "One should bear in mind," etc., you say:

"The analogy is fair enough, though it overlooks the fact that the same judges may be found in all three bodies, reviewing, for example, in Synod or Assembly, decisions which they themselves have helped to make in Presbytery. It is quite out of the question, then, to have a fresh and impartial review by higher judicatories of a case arising in a lower."

A little reflection would have shown you *à priori* that such a state of things would not be tolerated in a body standing so high in honesty and ability as the Presbyterian clergymen. Before making such a statement, you should have examined the Constitution of the church about which you were writing, to see if these things were really so. In the Constitution, book ii., chap. vii., section iii., par. xii., you may read: "Members of judicatories appealed from cannot be allowed to vote in the superior judicatory on any question connected with the appeal."

Please publish this correction as the only way you can make amends.

Yours respectfully,

ABEL H. HUIZINGA.

NEW PALTZ, N. Y., June 16, 1889.

[We were not writing of judicial cases, but of the method of effecting constitutional changes in the Presbyterian Church. If the Presbytery of New York votes in favor of creed revision, there will be and can be no "appeal" from that decision; and the members of the Presbytery who help to make it might be in Synod to vote the same way on the same question there, and some of them would surely be in the next Assembly to sustain their views in that body. Our correspondent must know this, and will see, on reflection, that he entirely missed the point of the remark he takes exception to.—ED. NATION.]

THE *MANHATTAN'S* CONTRIBUTORS.

TO THE EDITOR OF THE NATION:

SIR: I contributed to the *Manhattan* an article that was ready to have appeared (with illustrations) in the number after the last. In my case the editor "acted" like a gentleman until the concern suspended. He promised faithfully "as a gentleman" that he would see that my manuscript was cherished and preserved, whatever might happen to the magazine; for I had suspicions that disaster was coming. After the disaster no communications were noticed, though I have the best reasons for believing that they reached the eyes of the gentlemanly editor. The present whereabouts of my MS. and of the illustrations is unknown to "another wretched contributor" who has survived the loss. R. N.

THE IDEAL HOLIDAY.

TO THE EDITOR OF THE NATION:

SIR: Walking last night through a suburb of Boston, I passed the gate of a brewery, where a number of workmen were smoking their pipes and listening to a fat orator standing in his shirt-sleeves before them. The scraps of wisdom that I caught in hurrying by would require more space than they deserve were I to indicate all the interspersed profanity by dashes.

"I tell you," declared the orator, with a German tang to his tongue, "there's not a legal holiday in the United States!"

He paused a moment for a reply, which soon came from an Irishman: "How about the Foorth of July?"

"Ach!" said the German: "what could stop a man from working then if he wanted to?"

That was all I heard. It opened up such a vista of legal holidays in Labor's millennium, when officers of the law, armed with pistols and clubs, are to shoot or knock down the first man lifting his hand to do a stroke of work, that I think the workingman—whatever his employment—should contemplate the happy vision. M. H., JR.

BOSTON, June 17, 1889.

Notes.

FORDS, HOWARD & HULBERT have in press 'Signs of Promise,' sermons preached in Plymouth pulpit during the past two years by the Rev. Lyman Abbott.

J. B. Lippincott Co. publish shortly a midsummer novel, 'Three Days,' by Samuel Williams Cooper, with illustrations.

Ginn & Co. will publish in July 'Pages choisies des Mémoires du Duc de Saint-Simon,' edited for school use by Alphonse N. Van Daell; and, in August, Dumas's 'Trois Mousquetaires,' edited by Prof. F. C. Sumichrast.

Willard Fracker & Co. will soon publish in book form the Chicago *Tribune* prize novel entitled 'By a Hair's Breadth,' by Edith Sessions Tupper, who is now at work upon a new novel to be entitled 'By Whose Hand.'

Col. T. W. Higginson has been appointed by Gov. Ames of Massachusetts to undertake the writing of a history of the State's soldiers and sailors in the civil war, as provided by the last Legislature. Five years are allowed for the task, which has certainly fallen into good hands, and the execution of which will profit by the interval of a generation since the events in question.

The Messrs. Rivington, London, send us the new issue of the 'Annual Register' for 1888. The year was eminently one of transition in the politics of the four leading countries of the globe. The Tory policy maintained itself in Great Britain, but without inspiring any of its supporters with a belief in its finality, and with manifold signs of the growth of opposition among the electors at large. Across the Channel, Boulanger was rolling up his majorities, and disputing with President Carnot the leadership of the nation. Germany had her three emperors in quick succession. In the United States the Democratic Administration was unseated. All this the 'Register' tells with its customary incorporation of documents. It gives a part of the Republican platform on which Mr. Harrison was elected, omitting the virtuous professions in regard to civil-service reform. One might find fault with this; but the editor disarms criticism by only aiming to present "some of the most important 'planks,'" and we all know now that that on the civil service was one of the least important. The usual survey of literature, art, and science, and the obituary of eminent persons conclude the volume.

Mr. Lewis Sergeant renews his 'Government Year-Book' with a second volume for 1889 (London: T. Fisher Unwin). The peculiarity of this annual is its aim to exhibit the working of the governments included in its scope, with constant reference to the organic law of the several nations; or, in the words of the original preface, "to review each year the most striking of contemporary events, and to note how they hinge upon or tend to modify political organizations." As this is in the spirit of Mr.

Bryce's great study, 'The American Commonwealth,' one might have expected a reference to this work in the present volume, in the chapter devoted to the United States; but there is no sign that the present editor ever heard of it. He has reproduced last year's sketch of our Government with no other significant alteration than the giving in full the text of some of the amendments to the Constitution which were summarized last year. Now, as then, while telling of State railway commissions, he has no mention of the Inter-State Commerce Commission. He also allows himself to repeat his whimsical remark that the civil war was a "not very satisfactory manner" of settling the questions of slavery and national unity. The typography of the 'Government Year-Book' has been much improved, and the permanent skeleton of the work, the account of institutions, has been wisely separated from the yearly record of the events which develop and react upon the fundamental law.

Ginn & Co. put on the American market a 'Latin-English Dictionary,' for "Junior Boys in Schools," by C. G. Gepp and A. E. Haigh, whose scheme has much to recommend it. Stress has been laid on poetic usages and constructions; "words peculiar to Plautus or Lucretius, or to prose writers subsequent to the reign of Trajan, have been purposely excluded"; proper names and their derivatives are inserted in alphabetical order, as are syncopated and contracted forms, etc., etc. The references are to standard English grammars. The only fault we have to find with this admirably printed little volume is that the type is perilously fine. For infrequent reference this would be a slight objection, but for daily use it is a very serious one.

A third sheet of the whole State completes the Atlas of New Jersey published by the State Geological Survey. The first was political, the second a relief-map; the present (numbered 20) is colored for the geological formations. The newer and the older portions of the territory are clearly marked off, and their line of division very nearly coincides with that of the Pennsylvania Railroad. The course of the terminal moraine of the great northern ice-sheet, whose southernmost limit is Perth Amboy, is also exhibited, and is approximately identical with that of the Delaware, Lackawanna and Western Railroad, after the moraine begins its westerly trend at Summit. The execution of this sheet, like that of the rest of the Atlas, is of a high order, as is customary with what proceeds from Mr. Julius Bien's establishment. We should add that the sheets of the Atlas are procurable separately, at twenty-five cents apiece, by addressing Mr. Irving S. Upson, New Brunswick, N. J. The demand for them, we understand, has been large.

The annual report of the State Geologist of New Jersey, Prof. Geo. H. Cook, derives its technical interest from an extended discussion of the red sandstone area, by his assistant, Mr. Frank L. Nason. The endeavor is made to trace the synchronous horizons in this rock, to determine thereby the lines of faults, and thus to throw light upon the marked inclination of a sedimentary deposit nearly three miles in thickness, whose movement in one mass is hard to conceive of.

The seventh annual report (for 1887-88) of the Managing Committee of the American School of Classical Studies at Athens has to tell of the completion and occupancy of the new building, of the failure as yet to secure an endowment which will maintain a permanent director, of the temporary arrangement with Dr. Waldstein, etc. The work of the year is described by Prof. D'Ooge and Prof. Merriam, the excavations at Sicyon and Icaria possessing the chief interest. But of these our Greek correspondents have sufficiently spoken. The report is very freely and beautifully illustrated with heliotype views of the School and of the scene of excavations at Icaria. There is besides a map of northeastern Attica and a drawing after a graceful statue found at Sicyon.

The May *Library Bulletin* of Cornell University gives the present size of the collection as in excess of 102,000 volumes and 29,000 pamphlets.

Judge Mellen Chamberlain of the Boston Public Library read before the Massachusetts Society for Promoting Good Citizenship last February a biographical sketch of "Josiah Quincy, the Great Mayor." This has now been reprinted by the Society, with a steel portrait of the man who was both a great mayor, a great administrator, a great orator, and a very eminent statesman, and whom it would be hard to parallel now in any one of his public aspects, let alone all combined. The tract is very properly issued by a society having at heart the making of good citizens.

There was an error in our recent note on the late meeting of the American Library Association. We spoke of "modes of entry favoring popular ignorance in opposition to the more theoretically consistent practice of the British Museum—in favor, that is, of entry under much used pseudonyms in place of the real name, under the titles of British noblemen, and under the best known instead of under the last name of a married or divorced or remarried woman." The practice of the British Museum is correctly stated only in the last two cases: it enters noblemen under family names and married women under the last name; but in the first case it enters not merely well-known but all pseudonyms under the false name with a reference from the real name.

It is announced that only seven more instalments of the Life of Lincoln will appear in the *Century*.

Capt. Vangele's account of his explorations which settled the dispute among geographers as to the identity of the Mobangi and the Welle Rivers, is contained in the June Proceedings of the Royal Geographical Society. He describes the natives dwelling along the river for some four hundred miles above its confluence with the Congo as fine specimens of their race, having some mechanical skill, being "very fair workers in iron" for instance, but as inveterate cannibals. Though the various tribes are constantly engaged in raiding each other, he did not see a single slave. "All that is killed is eaten on the spot; what is captured alive is carried off, and eaten as the occasion arises." Several times he attempted to rescue these unfortunate captives. "'*It is meat*,' they always replied, 'and we don't sell it.' In fact, it is very characteristic that the names used to designate the man reserved for meat and the goat, whose destiny is the same, are almost similar, the first being *moboli* and the second *mboli*." Beyond the furthest limit reached by Mr. Grenfell in the *Peace*, he came among natives whose women had hair "hanging down in long and slender curling tresses finally united in one. I measured some of these tresses more than six feet long. Some of the women rolled these tresses round their heads like turbans," keeping them in place by "well carved and well designed" ivory pins. They also wore ivory bracelets which "seem to have been made on the lathe." The further eastward he went, the more densely populated and fertile he found the country. At the same time the friendliness of the natives changed to hostility, which culminated in a determined attack upon the expedition when within some sixty miles of a point on the Welle reached by Dr. Junker, and Capt. Vangele was reluctantly compelled to turn back.

The last three numbers of the *Portfolio* (Macmillan) continue Mr. Loftie's articles on Westminster Abbey, with numerous illustrations; the April number concludes Mr. Selwyn Brinton's two on the Certosa of Pavia, and Mr. Page's four on Dartmoor. Mr. A. H. Palmer begins in May a series on the famous animal painter, Joseph Wolf. In May and June Mr. Reginald T. Bloomfield makes use of MSS. and drawings at Chatsworth to throw a little more light on the career of Inigo Jones, not neglecting his architecture, but laying more stress on his designs for the stage—in the performance of masques at court, etc.—and his part in introducing movable scenery, which the public theatres still discarded. These details are very interesting and are well illustrated. The most striking print in the numbers of the *Portfolio* under review is a photogravure after an early marine by Turner.

L'Art (Macmillan), in its latest issues, has felt the influence of the Exposition, and has had at the same time to render an account of the Salon, employing, as usual, by way of illustration, not only autographic copies of the pictures themselves, but also facsimiles of the painters' studies for them. At the same time it has essayed a review, which might easily make a volume, of the painters of the hundred years 1789–1889, with portraits and specimens of their work. There is a still further variety in the table of contents, which we lack the room to specify; but we will recommend the article on the lamented sculptor Longepied, who died a year ago.

According to the second annual report of the Harvard Law School Association, the membership now amounts to 816, of whom a little more than half reside in Massachusetts, 100 in New York, 49 in Ohio, 24 in Illinois, 20 in the District of Columbia, etc.—no section of the Union being unrepresented. About four times as many graduates are known to be living, and as the fees (of admission and annual) are nominal, there seems to be no reason why graduate and member should not be synonymous terms. The Treasurer is Mr. Winthrop H. Wade, 10 Tremont St., Boston. The Association offers yearly prizes for essays, and also extends pecuniary aid to the Law School, for the betterment of instruction.

The thirty-eighth meeting of the American Association for the Advancement of Science will be held in Toronto, beginning on August 27.

The eighth International Congress of Orientalists will assemble at Stockholm and Christiania from the 2d to the 13th of September, 1889, under the Presidency of his Majesty King Oscar of Sweden. The programme (an English edition of which has been issued by the Smithsonian Institution) presents a variety of intellectual and other treats. Membership can be secured by addressing Dr. Cyrus Adler, U. S. National Museum, Washington, D. C. The fee ($4) entitles persons desiring to attend to all the privileges of the Congress. Persons not desiring to attend, colleges and libraries will secure by subscribing a full set of the Transactions of the Congress. When offered for sale, the Transactions usually bring more for each volume than the price of the subscription. A number of American learned bodies have sent special delegates to the Congress.

—Mr. Justice Miller opens the July *Harper's* with a history of the State of Iowa and a

brief description of the character of its people and the resources of the land. The palaces of St. Petersburg give the illustrations to the Russian article, which is from the journeyman hand of Theodore Child. The eighth "Great American Industry," glass-making, is very fully described and well illustrated. The most important contribution, however, is upon the educational condition of the South, by the Rev. Atticus G. Haygood of Atlanta, Ga. The author seems to have given great attention to the subject, and reviews the state of education among black and white, the progress made in recent years, and the resources at hand for continuing the work. He considers not only the common schools, but the higher institutions. He finds very much to praise, and very much to be done in the near future, as soon as means can be provided. The growing change in public sentiment towards the schools is the most promising sign of real advance; but the case, as it is here stated, is one of such illiteracy and inadequacy in the provision made as to furnish very sorry reading. A yachting poem, "Rounding the Stakeboat," is a clever piece of versification of technical sailing terms, which, though not quite unique in our poetry, is remarkably successful. The pictures of Adriaan van de Velde give some admirable woodcuts to accompany a short sketch of the artist. Mr. Curtis writes of the times of Washington, in contrast with our own, with pertinent observations upon the different bearing of the scandals cited against the fathers from those of the present day, and pays at the end a merited tribute to the long labors of Mr. Justice Miller, a portrait of whom is the frontispiece of the number.

—A catalogue of the second and concluding part of the Barton collection in the Boston Public Library has just been printed, an interval of nine years having elapsed since Mr. Hubbard's invaluable catalogue of the Shakspere portion appeared. While the present catalogue deals with a collection of material by no means comparable for its distinction with Mr. Hubbard's (pronounced in the Shakspere *Jahrbuch* for 1880 "the best bibliographical guide to Shakespearian literature hitherto produced"), yet it has been completed in a most painstaking and creditable manner, by Mr. Carret, with the assistance of Mr. Knapp and other members of the staff. Something of historic interest attaches to the successive steps by which this library has been collected. No less than 4,000 of its volumes, on the authority of the late Dr. Wynne, formed a portion of the library of Edward Livingston, the distinguished jurist, from whom it passed to Mr. Barton, his son-in-law. This department of the collection, if the term may be allowed, is composed chiefly of works on jurisprudence, American political history and economics, with some works also on penal law. Under such headings as "Bank of the United States," "French Spoliations," "Louisiana," and the subheadings, "Tariff," and "History: War of 1812," under "United States," a fairly numerous but by no means exhaustive list of publications will be found. The reason for this, no doubt, is, that Mr. Barton's own tastes in book-collecting were, very plainly, distinctively literary, rather than historical, and that he apparently made no attempt to fill the lacunæ in these latter portions of his collection as in the former, and especially the dramatic departments. For it is an interesting fact that, even after the Shakspere portion of the library has been set aside, it still remains largely a collection of dramatic literature, ancient, mediæval, and modern. In the classical drama the principle of collection in numerous instances places side by side with the original the various versions in modern European languages. In the case of the mediæval drama the miracle plays, mysteries, and other early or rudimentary forms of the drama are represented either in original or reprinted forms. In the English drama the catalogue will be found especially valuable as a bibliographical work of reference, since the closest approach has here been made to an exhaustive representation, and the collection includes about six hundred early quarto editions, chiefly of single plays. In characterizing the collection, so far as it represented Mr. Barton's own tastes, as literary rather than historical, the further remark needs to be added that, while he apparently made no effort at amassing the materials of a working historical library, many historical works found their way into the collection whose value, however, after all, is now chiefly a literary or bibliographical one. Such, for instance, are a notable copy of DeBry's collections of voyages, the early English chronicles, and similar works of rarity.

—In execution, this work of more than six hundred pages is worthy of hearty praise. Evidently from a desire to avoid unnecessarily increasing the bulk of the volume, there has been but slight attempt at description or annotation, though contents are carefully enumerated and dates most scrupulously entered and verified. To the same desire for compactness must doubtless be attributed the purposely condensed—sometimes, indeed, blindly condensed—model observed in the entry of titles. An instance in point is the following, on page 19: "Any, rather than fail, comedy"; where we believe that few readers would grudge the extra space needed to reset it as "Any, rather than fail. A comedy." Cross-references judiciously inserted throughout the catalogue add very appreciably to its usefulness, and are in general rightly inserted. At page 437, however, the cross-reference, "Penal law. See law," should plainly be corrected to read: "See Criminal law." In one particular the catalogue (repeating the usage of Mr. Hubbard in the Shakspere portion) observes a rule which one could wish to see widely followed—namely, the placing of the paging numerals at the foot rather than at the top of the page. In a dictionary catalogue—as indeed in a dictionary or directory—the person who turns over its pages in search of a given entry finds his eye guided not by the paging, but by the alphabetical catch-words at the top of the page.

—While on the subject of the Boston Public Library, let us say that we regret to hear that only twenty copies were printed of the useful 'Index of Articles upon American Local History' of Mr. A. P. C. Griffin, which we lately noticed. Such a list would be of great use in every town library in Massachusetts, even if the libraries have not the works referred to, for it is often of service to know that something exists, and where to go for it, even if one has to go far. Every historical society in the country, also, ought to have a copy. It is true that the material has already appeared at intervals in the Bulletin of the Boston Public Library, which is to be found in most libraries, but in that form it is practically useless, and they might as well not have it. Few have patience to refer to so many different places. In fact, the money spent in printing a bibliography in small scraps is simply thrown away.

—The one leading article of *Le Livre* for May has a peculiar value in being an inventory of the catalogues available in the Bibliothèque Nationale, which has no general catalogue for its immense collection. M. E. Pierret draws it up, in an order corresponding with the several departments of the library, viz., printed books, MSS., engravings, and coins. The good that was not interred with the bones of Napoleon III. is seen in the Catalogue of French History, "publié par l'ordre de l'Empereur," whose eleven volumes, begun in 1855, were not completed till 1879, when the Republic had nearly completed its first decade. The same thing occurred with the slow-moving catalogue of the medical sciences, ordered in 1857 and finished in 1873, though in only two volumes. The oldest book catalogue appears to be that of the "Bibliothèque du Roy," published in 1739–53, in seven volumes. The newest are the continuing monthly Bulletins of recent French and foreign publications. Among the special catalogues is one of books and documents relating to America, bequeathed by the late M. Angrand; another of Baron Ch. Davillier's legacy of sale, museum, and exhibition catalogues; a third of the collection once owned by the Comte de la Bédoyère, consisting of a vast number of newspapers, historical pamphlets, satires, posters, portraits, and caricatures, assignats, autographs, etc., dating from 1787, and especially strong for the period 1789–1800. There is besides a catalogue of a Montaigne collection, and one of Victor Schoelcher's slavery collection. *Le Livre* has a laudatory notice of Prof. H. C. Bolton's 'Counting-out Rhymes of Children,' a title which the reviewer proposes to render paraphrastically thus: "Pièces rimées, sur les quelles les enfants se comptent dans leurs jeux"; and yet, as he confesses, he omits the notion expressed by *out*—the going out (*sortir*) and the being put out (*mis hors*). The French, it seems, say, like ourselves, "He's *it*" (*il l'est*). Their rhymes, however, with only one exception known to (and here cited by) the reviewer, have a show of sense.

—Viscount Melchior de Vogüé, who has lately been elected to the chair in the Académie Française made vacant by the death of M. Nisard, took his seat on the 6th of June. His speech upon his reception made a good deal of a stir in the Academy and in the French newspapers. M. de Vogüé is the youngest of the Immortals; he was born at Nice in 1848. Twelve years of his life have been spent in the diplomatic service, as attaché of the French legations at Constantinople and St. Petersburg. His six years' residence in Russia, where he married a Russian wife, the sister of Gen. Annenkoff, made him familiar with the language and literature, the knowledge and love of which have been his chief distinction. Before he gave up diplomacy for a literary life he was the author of a book of travels in the East and also a volume of 'Histoires Orientales.' Upon his return to Paris he entered seriously upon authorship, publishing a volume a year for several years in succession. His best-known book is 'Le Roman Russe," mainly a study of Tolstoi and Dostoyevsky, which appeared in the year 1886. M. de Vogüé was not the earliest of the French lovers of Russian literature, nor has he been, perhaps, the most judicious of them and the wisest, but he has done very good work, and a good deal of it, and may be said to have fairly earned his place in the Academy. Besides his books he has written much in the *Revue des Deux Mondes* and in the *Journal des Débats*.

—We said that M. de Vogüé's address has made some commotion in the newspapers. It must have stirred the Academy itself still more profoundly. M. Rousse began his reply by saying that some parts of it would doubtless

have caused surprise to M. Nisard, if he could have been present, and would have spoiled his pleasure a little. One can well believe this, for M. Nisard was one of the oldest Academicians, and represented a past generation, while M. de Vogüé's address is probably the most modern in tone and temper that has ever been heard in the Academy. The two chief divisions of it were suggested by M. Nisard's two books, the 'Poètes de la Décadence Romaine' and the 'Littérature Française.' Latin, M. de M. de Vogüé thinks, is dying out. Forty years hence only a few "délicats" here and there will study it. The mass of men will get their classical culture through the medium of the great writers of the seventeenth century, the true inheritors of classical tradition and learning. A new generation will have grown up who will understand us little, and whom we shall not understand at all. But, whatever be the final verdict of history upon this age, at least it will be counted as a century of renascence and not of decay. So far we have no reconstructive philosophy—we have only positivism. This has done excellent work in levelling obstructions and clearing a road. It has done away with controversies by superseding them. But it is not final; it is temporary only, and an expedient. The future will have in it something much more satisfying—not the old ways of thought and the old philosophies; they never can come back—but something new. And so M. de Vogüé looks with a not unkindly eye at all modern thought, in fact, at the whole modern world, not so much because it seems to him in any wise absolutely good, but because it looks everywhere full of promise.

SKEAT'S CHAUCER.

Chaucer. The Minor Poems. Edited by the Rev. Walter W. Skeat. Oxford: Clarendon Press; New York: Macmillan. 1888.

ALMOST four hundred years went by after the death of Chaucer before anything like a satisfactory edition of his greatest work appeared. Nearly five hundred years have passed, and we witness for the first time a critical edition of his minor poems. Single pieces have indeed been brought out before, but no attempt has hitherto been made to gather together, with sufficient aids to comprehension, the shorter productions of one of the four greatest authors of our literature. The fact is a curious commentary upon the treatment which English classics have received at the hands of the English-speaking race. For a long period, in truth, it was deemed rather discreditable for a scholar who had (or who thought he had) sufficient learning to edit the most unimportant Greek or Latin text, to spend his time upon the most important work of a far greater man of his own race. When, in 1737, Dr. Morell published the initial volume of a contemplated edition of the 'Canterbury Tales,' he felt it incumbent upon him to apologize for the undertaking. "This, then," he wrote towards the end of his preface, "has been my amusement for some time, and I hope with no great detriment to the more severe and decent studies required by my place and character: I believe many a leisure hour might have been spent worse."

But though we have had to wait so long for such an edition as this, there are compensations that make up for the delay. The work has fallen into the hands of a scholar who does not feel called upon to apologize for the labor he has spent upon it, or who has been disposed to look upon it merely as the amusement of leisure hours. Prof. Skeat has brought to its preparation not only industry, interest, and enthusiasm, but wide knowledge of the early language in general and of the language of Chaucer in particular. It is this that has enabled him in several places to clear up obscurities that have defied the efforts of previous investigators to dispel, or have been passed over by them in silence. Some of the emendations are of the very happiest character. In fact, it is scarcely possible to speak in too high praise of this edition in many respects. The notes are ample, and embrace with the prefatory matter about half of the volume. In them Prof. Skeat has brought to bear upon the elucidation of the text all the great learning he has accumulated in the preparation of the various works with which his name is now so honorably connected. We have little hesitation in saying that there is no student of Chaucer living to whom this volume will not be an absolute necessity.

The book itself must therefore always be regarded as a landmark in the literary history which concerns itself with the poet. A brief analysis of its contents will give the reader a general idea of its character. It consists in the first place of 86 pages of preface, in which the editor gives a full catalogue of the pieces that have been attributed to Chaucer from the time his works were first collected in 1532, with an account of their character and an examination of the proofs of their genuineness. An enormous mass of information has here been summed up in a small space. Far as we should be from accepting every statement made in it, no one can deny its interest, its importance, or its helpfulness. In the account of the works at various times attributed to the poet we note only one error. The pieces numbered 66, 67, and 68 are mentioned as having first appeared in the folio of 1602, according to the statement quoted in the folio of 1687. We cannot say when they were first printed; but they can be found in the folio of 1598 and in that of 1561; and in the undated edition of about 1550, which now lies before us, they occupy their usual place at the end of the prefatory matter.

The poems included in this volume take up the 222 pages that follow the preface. They are twenty-three in all, three of them being placed in an appendix as having a certain character of doubtfulness. All of the undisputed minor poems are included, with the exception of the 'Legend of Good Women,' which has apparently been discarded on the ground that its length—over 2,700 lines—does not entitle it to be so considered. This reason applies with more force to the 'Troilus and Cressida,' which naturally finds here no place. This work is, indeed, often loosely classed among the minor poems of Chaucer. But a production which is nearly as long as the 'Æneid' can hardly be included under such a category with any propriety. On the other hand, Prof. Skeat adds two pieces, entitled respectively 'An Amorous Compleint' and 'A Balade of Compleynt,' that have never before been printed at all; one, entitled 'Merciless Beaute,' which has never been included previously in any edition of Chaucer's writings; and two, entitled 'Against Women Unconstant' and 'A Compleint to His Lady,' that have never been printed save in the folio editions of the poet's works, or in the collections of Anderson and Chalmers.

To balance these gains, he has excluded the prayer to the Virgin beginning "Mother of God and virgin undefouled," as being the work of Occleve. Of it he says that there is clear evidence that it was written by the pupil and not by the master. This may be so; but, whatever be the evidence that exists, the evidence that is produced can hardly be called clear. The fact that the poem is found in Occleve's handwriting does not prove of itself that it is Occleve's composition. We are not yet, in truth, in a position to pronounce decisively upon that author's works. "The Misrule," for instance, published with five other pieces in 1796 by George Mason, shows a mastery of metre on Occleve's part much superior to anything exhibited by Lydgate. Still, it is far from being up to the literary level of the "Mother of God." This poem, it may be remarked in passing, is said by Prof. Skeat to have been printed in the volume which Mason brought out in 1796. We fail to find it there, though its title is given in the preface describing the manuscript from which the selections were made.

The nearly 250 pages that follow the poems are taken up with the notes and glossary. In them will be found nearly everything essential to the full comprehension of the text. We are anxious, indeed, to express in the strongest terms the excellence of the edition as a whole, because a large share of this notice must be devoted to criticising and controverting doctrines that are earnestly advocated by its author. The result will seem, therefore, to imply a disproportionate and unintended degree of censure. It is because this work exemplifies peculiarly certain methods of investigation which have of late begun to prevail in the treatment of the text, that it is desirable to direct attention to the discussion of these general views rather than to the interpretation of particular passages. It is the more easy to do this because, while dissenting from some of the explanations given of the latter, there is very little to say of most of them but praise. When we come to the consideration of the former, however, there is frequently wide room for dissent.

For it is perfectly evident that the text of Chaucer is now going through the same process which in the last century was applied to that of Shakspere. A standard of composition, of versification, and of grammar is to be set up for the poet to which his lines must be made to conform. If they do not, the scribe can always be held responsible for the failure, just as in the case of the dramatist it was easy to take to task the actor or the type-setter. The verse is, in consequence, to be reformed to suit modern conceptions of what it ought to be, and reformed according to a theory which admits of no possible modifications. This theory, stated baldly, is, that Chaucer lived from his earliest years a life of absolute metrical, grammatical, and linguistic virtue. This life he led, too, not according to the view of this kind of virtue which he may have had himself, but according to the view which modern scholars have been induced to entertain from a study, more or less full, of the manuscripts of his works that have survived. The result is, that when his practice fails apparently to conform to their conclusions, it must by some means be set right. One result of this has been, that, in judging of his writings, the purely literary test—one of the most important of all, and in right hands the most important of all—has been practically discarded, and other and inferior ones elevated to its place.

Let us take first the matter of metre. Chaucer for a long period was spoken of as a rude and inharmonious poet, careless about the nature of his melody, careless about the character of his rhyme. This was a view begotten of ignorance and misconception, and it needs no longer to be controverted. His mastery of melodious expression places him in the front rank of English poets, in the opinion of all competent to express an opinion. The licentiousness of versification, once widely imputed to

him, was due either to inferences drawn from spurious poems, or from corrupt texts, or from lack of knowledge of the language. But there is just now a tendency to go to the other extreme. Chaucer, in this later view, is no longer the master of metre, but its slave. He does not anywhere allow himself the slightest liberty. He began a life of rigid metrical purity, and continued in it unflinchingly to the end. In no moment of carelessness, in no mood of caprice, did he wanton into the slightest deviation from the absolute precision of the versification which he had set before himself to observe. Not even was he once tempted to abandon it by the desire to produce effects of an unusual sort.

That Chaucer was generally observant of rule, that he was solicitous about the perfection of his verse, would naturally be inferred from the fact that he was a great poet. But he never turned regularity into a fetish. He reserved the right to depart from the practice he generally followed if he saw that any higher effects were to be gained by such a course. He never felt himself bound by the compulsion of a monotonous and therefore tasteless uniformity. For this fact we have his own authority. In his invocation to Apollo, at the opening of the third book of the 'House of Fame,' he asks the "god of science and of light" to make his rhyme "somewhat agreeable," even if the lines do occasionally lack a syllable. We may be sure that if some of them occasionally lacked a syllable, there were others that made up for it by occasionally having too many of them. But this is a view abhorrent to modern editors. Apollo having at any rate done his duty in making the verse agreeable, it seems to have struck Prof. Skeat that it was his duty to make it regular. It will therefore be pretty difficult to find a line in this edition which either lacks or exceeds in the duly authorized number of syllables.

No student of Chaucer will indeed deny the necessity of emendation, especially in the case of the poems written in the line of four accents. Of these the manuscripts are very few, and the few are unsatisfactory. For them it is almost impossible by any collation to furnish a text absolutely free from error. There must be emendation. About the character and extent of it there will always be room for honest and intelligent difference of opinion. Still, there is no safe rule in editing an imperfect text but the general one, that when the existing text makes fairly satisfactory sense and satisfactory metre, it is not to be altered to make it accord with certain theoretical standards of perfection which exist in the mind of the editor, but cannot be proved to have existed in the mind of the author. The result of any such procedure is sure to be harmful. We see the fact exemplified at times in this very volume. Changes are occasionally made in the text for which there is not the slightest authority in the manuscripts and for which there cannot be urged necessity, which is usually as much the devilish plea of the commentator as it is that of the tyrant. Some of these introduced readings will strike the observer from the purely literary point of view as impossible for the poet even to have contemplated.

An example or two must suffice. In the 'Book of the Duchess' the hero is represented as bewailing the death of his wife, and at the end of a series of expressions of ardent love he calls her

> "Myn hap, myn hele, and al my blisse,
> My worldes welfare and my goddesse."

There is in all this a natural climax. The intensity of the language corresponds to the intensity of the feeling. The student of poetry as poetry feels it at once. How does it appear in this edition? *Goddesse*, which is found in all the sources of the text, is, we are told, an obvious blunder. It clogs the line with an extra syllable and produces a false rhyme such as Chaucer never makes. We are furthermore gravely informed that the word *goddesse* was probably substituted for *lisse*—which means 'cessation,' 'alleviation'—because the latter was obsolescent. Accordingly, *lisse* appears in the couplet just given, though included between brackets. We need not comment upon the fact that in other instances the scribes experienced no difficulty with this obsolescent word, for as a noun or verb they found and left it half-a-dozen times in the poet's works. It is the literary rather than the linguistic sense that is struck by the alteration. Fancy a lover as the climax of an impassioned speech about his mistress describing her as his 'alleviation.'

There is just as bad an ins'ance in the 'House of Fame,' though of a somewhat different character. In that poem mention is made of musicians that piped "in doucet and in *rede*" (variants *riede*, *ryede*)

> "That ben at festes with the brede [variants *bride*, *bryede*]."

To be at feasts with the bride is a duty to which musicians would naturally be assigned by a poet who aimed to depict both the truth and the beauty of life. But such an interpretation of the passage involves a rhyme that Prof. Skeat cannot away with. He therefore rejects *bride* in its modern sense, and substitutes for it *brede* in the sense of "roast meat." This word with this meaning is not to be found elsewhere in Chaucer, but it does occur in Old English. The scribe of the Fairfax MS., the editor tells us, has turned *brede* into *bride*, regardless of the rhyme. It is therefore not the marriage festivity which Chaucer had in mind, at which the musicians assembled. It is at feasts where roast meat is furnished. This is poetry with a vengeance. It is editing a text from the culinary point of view rather than the literary.

We should be sorry to give the impression that emendations and interpretations of the kind just given are frequent. This they are not, and in the poems written with lines of five accents illustrations of such a sort could hardly be found at all. But the undue magnifying of rhyming and metrical tests has had a reflex influence. The editor has added to the list of Chaucer's works certain pieces. These he believes to have been his composition, not because they have literary value — which they can hardly be said to have—nor even because they are contained in manuscripts along with other productions that are well known to be the work of the poet. It is clear that the supreme determining reason in his mind for attributing them to him is the fact that they conform perfectly to certain metrical tests. We cannot affirm, indeed, because a poem is a poor one that therefore it was not written by a great author. Still, justice to a great author demands that he shall not be saddled with the reputation of begetting every ordinary production floating about in his time merely because its rhymes are correct and there can be found for it no other reputable parentage. In speaking of one of his additions, 'An Amorous Compleint, made at Windesor,' the editor triumphantly remarks: "If he did not write it, we may well ask who did?" This is a singular argument to come from a scholar who has been most urgent in maintaining the spuriousness of poems, long attributed to Chaucer, which are far superior to anything written by any of his avowed disciples, and are not unworthy of even his genius.

Now, we venture to assert that Chaucer was never so particular about the observance of verse tests, rhyme tests, dialect tests, as his editors have come to be for him, and that while it is perfectly legitimate to affirm that he generally followed certain practices, it is impossible to maintain that he did not deviate from them occasionally. Let us take for illustration the use of Northern dialectic forms which Prof. Skeat has more than once insisted upon as an argument against the genuineness of the existing version of the 'Romaunt of the Rose.' There is little doubt that Chaucer, especially in his earlier work, was to some extent under the influence of that dialect. It was natural that he should be. In the region where it was spoken he spent a portion of his life. It was inevitable that he should become more or less familiar with it, and, being familiar with it, that on occasions he should resort to its forms. The fact we can see illustrated in his employment of several words that belong specially to that dialect. But far more striking is his use of one of its most remarkable grammatical peculiarities. This is in the formation of the third person singular of the present tense of the verb. In the North this ended regularly in *-s*. In the Midland dialect, in which Chaucer wrote, it ended just as regularly in *-th*. Never once did the poet use the form in *-s* in the 'Legend of Good Women,' in the 'Canterbury Tales,' or in fact in any production written in the line of five accents. We of course exclude corruptions that can be found in particular manuscripts which the comparison of other manuscripts shows conclusively to have been foisted in by the copyists. But this Northern form does occur in the 'Book of the Duchess' and in the 'House of Fame.' In them it is not due to any blunder for which the scribe can be held responsible: it is absolutely essential to the rhyme; it is therefore the work of the poet. In the first of these two productions *telles* rhymes with *elles* (lines 73-4), and *falles* with *halles* (lines 257-8). In the second *elles* again rhymes with *telles* (lines 425-6). In the latter poem also another peculiar grammatical form of the Northern dialect is found. This is the second person singular in *-s* instead of *-st*. In lines 1907-8 *tydinges* can be found rhyming with *bringes*. The editor, so far from commenting upon these dialectical peculiarities, makes not even the slightest allusion to them, so far as we can discover. Yet were the genuineness of the poems in question, it is safe to say that no one would point with more confidence to these same rhymes as positive proof that the pieces containing them could not have been the production of Chaucer himself.

We find the same difference between author and commentator in the comparative deference paid to rigid rule in the matter of rhymes depending upon grammar. Prof. Skeat assures us in this volume, with great positiveness, as he has done on several other occasions, that Chaucer never rhymes a weak past participle with a weak preterite. It is a point, he informs us, upon which the poet was very particular. Accordingly, in a previous work, he changed *he wente* in line 534 of the Second Nun's tale into *is went* on the authority of a single manuscript, and that an inferior one, against the authority of all the others that have been printed. Now, that this sort of rhyme is comparatively rare in Chaucer can be conceded; but that in this respect he had not attained to the pitch of linguistic and metrical virtue of his editors is quite as certain. In the 'Legend of Good Women' he rhymes the preterite *heryede* with the past participial form *beryed*

(lines 787-8). In lines 2384-5 of the same poem he rhymes the past participle *served* with the preterit *deservede*. Even in the poem included in the present volume, the 'Parliament of Foules,' the weak verb *broughte* rhymes with the weak past participle *y-wrought* (lines 121-3), though the latter appears in this edition as *y-wroghte*, a form which has at best the authority of but two out of a dozen manuscripts that have been printed. We have not exhausted the illustrations that could be given, but they are enough to establish the point.

Equally unfounded, it seems to us, are some of the editor's contentions in his preface. He is very positive, in the two following lines from the passage in which Lydgate gives a list of Chaucer's works,

> "He wrote also full many a day agon
> Dant in English, himself doth so expresse,"

that the 'House of Fame' is the translation of Dante which is here mentioned, if indeed we can employ so large a word as "translation" as the equivalent of Lydgate's phrase. Still, that the 'House of Fame' is meant is perfectly clear to him, though he admits that he can find no one else who seems to have thought of it. We are disposed to go further and maintain that he is the only one who will ever think it. The obligations of Chaucer to Dante in this poem have been absurdly overrated by German scholars, but the views expressed here exceed anything that has as yet been formulated. A far more satisfactory explanation of Lydgate's remark can easily be given. His only authority, indeed, for the assertion is the assertion of the poet. "Himself doth so express," he tells us. But in the sense in which such a statement would now be understood, Chaucer never said anything of the sort, so far as we have any evidence. In the sense in which the statement would probably then have been understood, he did say so. He did versify lines from Dante, he quoted him once or twice by name. It is reasonable to suppose that the passages avowedly taken from him and the references to him are all that Lydgate had in mind. There are many reasons to believe that the word 'translation' was then used in a far looser sense than now, and that translating an author meant sometimes little more than translating from him.

Lack of space compels us to omit the discussion of several other points to which the statements in this volume give rise. We are far from wishing to be understood as undervaluing the importance of these tests, upon which Prof. Skeat, in common with many German scholars, lays so much stress. It is the exalting them to supreme dignity from the subsidiary position in which they hold an honorable place, that calls for vigorous exception. It is the representation, that is objectionable, of the poet as servilely submitting to rules having in the nature of things no binding authority, but which neither temptation nor provocation nor the chance of securing better results could induce him in a single instance to disobey. But these differences of opinion do not hinder us from recognizing the exceeding merits of this work and the excellence of the editorial labor that has been devoted to its preparation. These will speak for themselves to the student upon every page, and we cannot better close our notice than with the renewed assertion that to every one who wishes to make himself familiar with the writings of the first great poet of English literature, the possession of this volume is an absolute necessity.

On first thought one is tempted to say that the most remarkable thing about 'Passe Rose' is its experimental boldness; but, on reflection, the justification of that boldness by complete success is more surprising still. In the beginning of the century there would have been neither risk nor rashness in selecting for a scene the forest of Ardennes, when Charlemagne, resting from battle, kept court beneath its shade. Then people did not realize the worthlessness of works of the imagination in which imagination is perceptible, and revelled in the bliss of their ignorance: then the air was ringing with the song of romantic poets; then Sir Walter Scott was busily conferring immortality on kings and queens long dead, and on all the splendor that had died with them, little dreaming that he was doing a most wicked thing, and that in wiser and more righteous times a voice would be heard crying from an American Republic to lay bare his iniquity. Fortunately for the literature of that Republic, 'Passe Rose' was written before the American father had been warned against that pernicious old tuft-hunter, Sir Walter, and solemnly urged to impress upon his children the insidious evil lurking in those apparently harmless nursery tales which uninformed generations have been accustomed to call novels, collectively, the Waverley novels. Mr. Hardy might have dared to disregard instruction in insignificant matters of form and method, even to fly in the face of authority; but the bare suspicion that he was about to abet base designs on the political faith of his country would surely have stayed his hand. However, what is done cannot be undone, and we have got, by the skin of our teeth, as it were, a story of uncommon beauty, all about people whose eyes turned to the King as the sunflower turns to its god—a king, too, whose kingdom was won by the sword, and bound together by the shackles of the slave, from the Elbe to the Ebro and from the North Sea to the Adriatic.

To Passe Rose the divinity of the King was no more questionable than that of the saints, and the delights of his court were more seductive than those of Paradise, probably because to a girl of her spirit they seemed more surely attainable. Passe Rose is herself a creature of delight. Nobody's child, she dances along through wood and town, in the wake of barbarian armies, at the tail of merchant caravans, seizing the joy of to-day and careless of to-morrow's sorrow. A gold-beater of Maestricht finds her asleep by the roadside, and takes the pretty thing, in her tawdry costume of Folly, home to his good wife, who adopts her as a gift from God. Thus far Passe Rose is so perfectly imagined that we fear the future. Is she to be reformed by respectability with a thoroughness that shall discredit every lesson of human experience? Is she to develop a strain of coarseness, or dissolute propensity, the worst possible effects of childish vagabondism? Or, disaster dire and most probable, will she straightway begin to live, move, and breathe with self-conscious rectitude, torturing herself into conformity with an entirely modern standard of propriety? Into any of these pits a slight dimness or deflection of vision might easily have led the author. His sight was clear and true: so Passe Rose goes dancing on, in sun and shower, requiting love with loyalty, quick and ruthless in resentment of injury or offence. truthful when she may be, dissembling when she must, and most resolute to get whatever she strongly craves. She lives with all her might, and we have always a woman before our eyes, never an isolated faculty or part acting independently of the whole.

One such character as Passe Rose is enough to give rank to a novel; but her position is not that of the star actress who is at once exalted and belittled by incompetent support. Great lady and peasant woman, knight and monk, each is given a part so well adapted to his nature that spontaneously he could play no other. The Saxon, Rothilde, a traitor among traitors, has enough unscrupulous cruelty and utter selfishness to accomplish her treachery, had not circumstances thwarted her; and again, had not fate been kind, Brother Dominic's vast vanity must surely have hurled him to perdition. The Prior, Sergius, is dominated by that worldly ambition which gives the lie to professions of holiness, and the Abbot, Rainal, is possessed of that holiness which makes itself felt without profession. By the grace of imagination, the gift of God, and of scholarship and technical skill, the rewards of hard labor, Mr. Hardy has written a rarely perfect story, combining the undying and inexplicable charm of a fairy tale with the definable merits of the best fiction that deals with actual life and human character.

The American who reads 'Greifenstein' close upon 'Passe Rose' may well tremble for the Republic, and sorrowfully reflect that its novelists have conspired for its destruction. The feudal aloofness of 'Greifenstein' takes the democratic breath away. Two baronial castles share the action, castles amply supplied with mediæval necessaries, such as turrets, battlements, and donjon keeps. The castles are perched on all but inaccessible crags in the gloomy heart of the Black Forest of Swabia, and are of an antiquity little less high and hoary than that of the crags and the fir trees. The inhabitants of the castles are the noble remnant of noble lines, and though the Sigmundskrons are extremely poor, and the Greifensteins extremely rich, the former have the consolation of a flawless family honor, stretching backwards for a thousand years to Sigmund the Volsung, while on the escutcheon of the latter there is just a little speck. This little speck has a terrible power of expansion, and magnifies itself into a black cloud of crime which swallows the nobility of the Greifensteins, and effaces their name for ever. The crime perpetrated in Greifenstein castle by two most high-born gentlemen would perhaps appear more probable if it were ascribed to two unshaven anarchists in a beer cellar; but no scene or actors could modify its atrocity.

Guarding against general incredulity, Mr. Crawford, before entering on the narration, excuses it by the assertion that what he has to tell is not fiction, but fact. With the excuse he is in a worse predicament than without it, for, granting that somewhere, at some time, two strong men saw fit to strangle a silly, helpless, tawdry old woman, human judgment, to which Mr. Crawford appeals, rejects the deed as impossible to two men of the character, breeding, and experience attributed by him to Count von Greifenstein and his half-brother, Von Rieseneck. When the narration of a tragedy fails to inspire that horror which is the intrinsic property of tragedy, then there is a false note either in the conception or their execution. In this case we have Mr. Crawford's word that he is responsible only for the execution, for the description of actors in the

tragedy, and of the way they brought it about. When the punishment of the wicked fails to fill the righteous with satisfaction, and, on the contrary, excites contemptuous indignation against those who have taken upon themselves the office of avengers, then, for all moral and for all artistic purposes, the punishment of the wicked is profitless and a bald atrocity.

The great Greifenstein crime is enacted early in the history, and the difficulties of keeping excitement up to such a pitch are obvious. The author wrestles with these difficulties sternly and overcomes them gallantly. The sins of the fathers are visited on the children with Judaic severity, and their dreadful, complicated secrets keep leaking out at most critical moments, threatening to blast every sweet hope and joy of the later generation. As a woman ruined the two fathers, so, by a beautiful, poetic sense of contrast with which fate is not often credited, a woman saves the two sons. There is nothing in the way of averting impending calamity of which Hilda, the last fair flower of the Volsung stock, is incapable. Her mere presence revives her lover, the young Greif, when already the death-rattle is heard in his throat, and her heroic common sense saves him later from an irretrievable folly which, if committed, would have sent the noble Sigmundskrons to join the Greifensteins in dishonorable extinction. Essentially 'Greifenstein' is no more than a very cheap sensational romance; and it is only in the unaffected, easy-going style that we recognize a sane and reputable novelist. The high-born ones do not habitually ask the time of day with an elegance of manner which at once proclaims their long descent; they are not constantly quaffing priceless wines from jewel-studded beakers, nor do they use bank-notes for kindling, but, in spirit and in deed, they are the great people of the chromo fiction and of the mob the best-beloved.

The title of Dr. Mitchell's 'Far in the Forest' is not misleading. The pages echo the music of rustling leaves and chattering brooks, and at times reflect that melancholy which sits brooding in wooded solitudes. The wilderness in which the scene is laid has none of the attractions or advantages for a story-teller possessed by the forests of Ardennes and Swabia. The horn of courtly huntsman never sounded down its glades, the shock of battle never wounded its silence. No elf or fay ever meditated mischief beneath its "murmuring pines and hemlocks." It is an innocent American forest, quite without experience, and having accumulated through all its centuries no more knowledge than that its leaves bud and fall and bud again, and that the rivers are always hurrying by, but never getting away. In such a scene, if anywhere, total exclusion of the perilous aristocratic element might be expected, yet the hero of the story is a German, a baron, and he is the hero by virtue of qualities inherited from ancestors who had the habit of command and of self-control. Riverius is indeed more attached to ideas than to traditions, but his ideas alone would never have excited the suspicion and hatred of the aggressively free and independent lumbermen, nor brought about the culminating tragedy. The mere presence of Riverius as a power in the camps implies a coming tragedy, and when it comes, it is the natural result of all that has gone before—an inevitable catastrophe. The figures of the well-tutored German and of the ungoverned woodsmen are well contrasted, are solid and vigorous, but lack the touch of vivid life which a lighter and freer style than Dr. Mitchell's might have given them. Elizabeth Preston, too, is heavy, and, till the last moment, rather negative and uninteresting; but in the child of an actress and the blind giant Philetus we have a charming baby, with subtle indications of the eternal woman. All the characters, however, contribute something to the clearly conceived plot, and none could have been omitted without loss to the dramatic intensity of the last chapters.

Between the actual life of times present or past and that represented in Mrs. Burnett's 'Pretty Sister of José,' the resemblance is microscopic. The pretty sister has flirted and pirouetted and warbled through innumerable operettas. A satisfactory synopsis of her history could be made by judicious selection and arrangement of those sheets of thin white paper, much decorated in blue, which lie between the wood and the fruit of boxes of raisins imported from Malaga. There is imprinted, and there has been imprinted from time out of mind, the pretty sister in short skirts and mantilla, with the deep-red rose in her hair, flirting her fan or thrumming her mandolin; there are the vine-clad cot and the leathery-faced grandmother busied about pots and pans which doubtless smell strongly of garlic; there is the supremely beautiful matador, proudly advancing, and there are the arena and the bull and a promiscuous multitude of mantillas and moustaches and red roses and brigand hats. Now, the only question that arises is whether the matador will conquer the pretty sister, so haughty of mien and cold of heart—for, of course, the bull is doomed. By the pictorial method of reading the story, one could answer according to his degree of ingenuity, and he who should show less than Mrs. Burnett would be dull indeed. There are novelists in Spain to-day who are neglecting the mantilla and mandolin, the matador and the bull, and Mrs. Burnett's well-meant intention may have been to jog the national memory and to protest against deliberate consignment to oblivion of so much picturesqueness.

Doubtless the sun, in the course of its shining, has been obliged to endure passively much that a less well-regulated planet, or, let us say, a planet with more of free-will, would have flown out at and publicly denounced. But Miss Rives goes too far. The sun never saw those things she calls upon it to witness and suffered them to be. It is a mad world, but were it half so mad as Miss Rives represents it, the sun, the stars, and all the celestial bodies would start from their spheres to demolish it, and chaos would be come again. No, the sun never shone on the land Miss Rives describes, and God never made the creatures that there abide. Ouida created all. Hers is that land of the ilex and laurel, of the palm and the pomegranate, the olive and almond, all growing together in perpetual blossom—hers and no other's. Hers are the crumbling marble temple and the fallen pagan God, with red rose leaves staining his polished limbs, like "drops of fragrant blood." Hers, most unquestionably of all, are the creatures, "neither man nor woman, neither beast nor human," who love madly, hate venomously, and intrigue vilely in the fair estate provided for their delectable pursuits and performances. By the force of a corrupt yet ardent imagination, by the license of total indifference to common decency, and by considerable observation of varied forms of human depravity, Ouida was able to throw that *verve* into her work which made her famous and her novels infamous. Lady novelists ambitious of rivalling her, and lacking any of her qualifications in their full perfection, can only make their books ridiculous and expose themselves to the jeers of the vulgar. Miss Rives, on the whole, falls far short of her model. She takes herself most seriously, not to say solemnly, but there is no salvation in that. Yet there are indications that her ambition is not quite vain, and even instances of the disciple's equality with the master. The Ouida version of the classics contains nothing more surprising than the conversion of Æneas into a "celebrated Greek.' Among her host of literary geniuses we remember none more gifted than Miss Rives's Nadrovine, and none of a physical force comparable to that of this incendiary Russian, who was so well preserved that "at twenty-nine his light-brown curls were as free from any tinge of gray as they had been seven years before." Finally, in the Ouida collection of curiosities, by her called mothers, there is no such rare specimen as Madame Nadrovine. Miss Rives, in dwelling upon the quality of a mother's love for her only son, has wrought herself into a species of frenzy, and poured such floods of light on the elements of the maternal passion and its possible expression, that the ordinary mother may blush with shame for her guilty inadequacy. To be wise for her son, self-sacrificing and tender is nothing. She must chain him to her by the seduction of the senses, by burning caresses, by words that tear away the artificial barriers set up between men and women by theories about modesty and propriety. To insure what she believes to be her son's welfare, she must concoct schemes that involve her own degradation, and, above all things, she must not forget to prove her self-abnegation by tramping about the country after him in unbuttoned boots. Any mother who, beguiled from the path of duty by the leisure of a long railway journey, should employ that leisure in buttoning her boots, would fall contemptibly below the standard for mothers set by Madame Nadrovine.

A RECONSTITUTED LATIN GRAMMAR.

A Grammar of the Latin Language, for the Use of Schools and Colleges. By E. A. Andrews and S. Stoddard. Revised by Henry Preble. Boston: Houghton, Mifflin & Co. 8vo, pp. xii, 453.

THE appearance of a new Latin grammar would not, under ordinary circumstances, call for any extended notice. Still less would the publication of a "revised edition" of a well-known school-book demand attention. But there are some things connected with both the old and the new editions of 'Andrews and Stoddard's Latin Grammar' a knowledge of which will be useful to some of our readers, and perhaps interesting to all.

The first edition of the work was published in Boston, by the old firm of Crocker & Brewster, in 1836. During the last half century it has been used in the schools and colleges of the United States more than any other Latin grammar, perhaps more than all others combined. During the half-century preceding 1836, 'Adam's Latin Grammar' had been used in almost every school, public and private, in which the Latin language was taught. In all that time it had remained unchanged. The boys who hurrahed for Jackson learned their Latin in the same way and out of the same book as the boys who gazed with awe upon George Washington. When Andrews and Stoddard's grammar appeared, its success was as astonishing as it was deserved. In the twenty years succeeding its first publication, sixty-four editions were issued, and before the end of that period Adam's grammar lived only on the shelves of libraries and in the memories of men who had studied it in their youth. No substantial change was made in these rapidly

appearing editions. Manifest errors were corrected, slight changes in phraseology and some small additions were made, especially in the forty-sixth edition, which appeared in 1854; but in all important particulars the sixty-fourth edition was like the first.

In the meantime, the progress in every department of philology had been enormous. Many rival grammars had appeared and were competing sharply for public favor. Prof. Stoddard was dead, but Dr. Andrews recognized the fact that, if their grammar was to maintain the high position it had acquired, he must bring it more into harmony with advanced ideas. He did not wish, and had he wished, he would probably have been unable, to make a new grammar materially different from the old one. He was essentially a scholar of the old school, and the wonderful success of his book was due, not to the introduction of any new system, but to the accuracy and completeness with which he had carried the old system out. The grammar as originally published offended no deep-seated prejudices, violated no long-established customs, ran counter to no ancient traditions. Andrews and Stoddard's grammar was a lineal descendant of Adam's, but the public had said of it what Hector prayed the gods might be said of his son:

. . . πατρός γ' ὅδε πολλὸν ἀμείνων.

Dr. Andrews gave the sixty-fifth edition of his grammar, which appeared in 1857, a thorough revision. He brought to the accomplishment of his task a very minute and accurate knowledge of the details of the Latin language. He had published in 1845 a school dictionary of the Latin language, and in 1850 his extensive Latin-English Lexicon based upon the Latin-German dictionary of Freund. During the years devoted to the preparation of these works he had noticed such points as he supposed would be useful to him in a revision of the Grammar. All these resources were brought into play, and when, in 1857, the sixty-fifth edition appeared, it was enlarged by more than a fifth of its original size. But the identity of the book was not destroyed. The plan and construction remained the same. The division into sections and their numbering remained unchanged. The same subjects were treated under the same heads and in the same manner; the chief difference consisted in the addition of a mass of details the utility of which was perhaps disproportionate to the space they occupied. The sixty-fifth edition was the first filled in, corrected, and extended. Teachers who had used the earlier editions changed without difficulty to the use of the new one. They could refer their pupils to the same section for the explanation of a point with the utmost confidence that, though the explanation might be fuller and clearer, yet it would not be inconsistent with what they themselves had learned years before. During the thirty years which followed the publication of the new and revised edition the Grammar continued to be extensively used — probably more extensively than any one grammar of the Latin language, but not, as for several years it had been, more extensively than all other Latin grammars combined.

But the book was fast becoming antiquated. Its lack of harmony with the principles of modern philology and the modern methods of teaching language was every year becoming more apparent. The publishers and owners of the copyright were aware of this, and they called upon Prof. Preble to attempt the task of rejuvenation. The result is before us, and we think it may without exaggeration be summed up as follows: On the back of the book is printed 'Andrews and Stoddard's Latin Grammar'; the first part of the title-page reads, as of old, "A Grammar of the Latin Language for the use of Schools and Colleges"—and that is about all there is to identify the work. The volume is taller and wider and has more pages; the paper is finer and whiter, the type is larger and clearer, it is in all respects handsomer. It is printed at a different press, by a different process, and by a different firm. The original authors and owners of the copyright have long since gone to their rest. The property in the copyright has passed to their legal representatives, and, as if to emphasize the contrast, these, five in number, are, with the exception of the publishers, all women. The division of the work into sections and their numbering has nothing in common with the old grammar. In that the syntax commenced at §200, in the new one it begins at §309. The text of the work has not been revised; it has been rewritten and rearranged. Had Prof. Preble published the work as it stands, under the title 'A New Grammar of the Latin Language,' omitting all reference to Andrews and Stoddard, we do not believe any reviewer would have accused him of plagiarism, nor could any suit for infringement of copyright have been brought against his publishers with any chance of success. Profs. Andrews and Stoddard began, as they tell us in their original preface, with the intention of preparing a revised edition of 'Adam's Latin Grammar,' but abandoned that intention and produced a new work. Prof. Preble began with the intention of preparing a revised edition of 'Andrews and Stoddard's Grammar,' and he has given us a new work without formally abandoning his original intention. The book is a new one, and, as such, we will point out, in the limited space at our command, a few of the many points in which it differs from the old grammar.

The pronunciation of the Latin language, as taught in 'Andrews and Stoddard's Grammar,' was that known as the "English method," and it had been in use for several generations in all English and American schools. The authors did not pretend to anything new, except in their manner of presenting it. On this they prided themselves, and it was as effectual as could be devised. But in 1857, when Dr. Andrews published the revised edition of his Grammar, the revolt against the "English method" had become a rebellion, and the rebellion gave strong promise of becoming a revolution. The only concession, however, which he made to the new practices was to print in brackets a table of the sounds of the vowels according to what was called the "Continental method," and to append to the directions for pronouncing the letter *c* the remark in fine print: "In the pronunciation of the ancient Romans, the hard sound of *c* and *g* seems to have been retained in all their combinations." The method actually taught in the revised Grammar was the same as in the old. That method not only converted the language into a gibberish which would have shocked Cicero and Virgil, and which was unintelligible to the Latinists of all other countries, but it violated all the phonic laws of the language, and rendered their explanation impossible. But its evil effects were not confined to Latin. The "English method" was applied to Greek as well, and we recognize in this absurd way of pronouncing the classical languages one of the chief reasons why England has lagged so far behind Germany in the science of comparative philology.

Prof. Preble has made short work with the "English method." He has tossed it overboard as so much rubbish. In the Grammar he has not noticed it even as matter of history. In his preface he briefly refers to it merely to let us know what has become of it and save us the trouble of looking for it. As to the "Continental method" of pronouncing Latin, Prof. Preble does not mention it. The phrase was always ill-chosen and misleading. In the pronunciation of the simple vowels there was always a substantial uniformity throughout continental Europe. In all other respects there were marked differences in the different nations. No method existed. A Frenchman said Sisero, a German Tsitsero, an Italian Tchitchero; and Cicero himself would have told each of them that he was not acquainted with any person of that name. The system adopted by Prof. Preble is the one now universally admitted by the best scholars to represent most nearly the actual pronunciation of the ancient Romans. Latin thus pronounced would have been intelligible to the Roman Senate in the days of Cicero, and that is more than can be said of the burlesque which still lingers in most English and many American schools and colleges.

Prof. Preble has adopted throughout his work the plan of marking the long vowels, and has rightly insisted upon the distinction between long vowels and long syllables. The first syllable in *captus* is, for the purposes of versification, long; but the vowel *a* in that syllable is not and was not pronounced as a long vowel either in verse or prose. For reasons which we have no room to give, we think it would have been better to have left unmarked those vowels which he has marked as "common" and directed to be pronounced short in prose. Neither have we any room to explain and defend another opinion, of the truth of which we are profoundly convinced, namely, that most of the "rules of quantity" which occupy so large a space in all our Latin grammars should be sent after the "English method" of pronunciation.

The subject of the inflection of words of course occupies a large part of this, as of every other Latin grammar. Prof. Preble's treatment of it is a great improvement on the old grammar. It takes the learner along the road marked out by comparative philology, perhaps as fast and as far as either pupils or teachers are at present able or willing to go.

Of the syntax it may be said generally that, as compared with the old grammar, it aims more at explanation and illustration, and depends less upon the reduction of everything to fixed and rigid rules. The treatment of the subjunctive mood affords an apt illustration. In the original grammar this part of syntax occupied twelve pages; in the revised edition of 1857 it had grown to sixteen; Prof. Preble gives it fifty. But it is evident from what he says in his preface, and from occasional remarks in the text of the Grammar, that he depends not so much on formal statements as on the number and fitness of the passages which he cites from the classical writers. These passages he has arranged in parallel columns. In one column are sentences with a verb in the indicative; in the other, sentences in other respects similar in construction, but with the verb in the subjunctive. Then, by a careful translation, he has endeavored to bring out the distinction between the two. This is a very good method, but we think it might be improved. In many of these sentences the subjunctive might be substituted for the indicative or vice versa, and the sentence would still remain grammatical and intelligible. No doubt this change of mood makes the author say something more or less different from what he actually did

say. But that is the very point which the learner needs and desires to see brought out, and it can hardly be brought out in any other way than by a comparison of sentences identical in all respects except in the mood of the verb.

Prof. Preble gives about thirty pages to the subject of versification, treating it according to the method of Dr. J. H. H. Schmidt, the general adoption of which seems to be only a question of time. On the whole, the new grammar is much more in accordance with the results of modern scholarship and the modern methods of teaching than the old. Teachers who have been accustomed to the latter will probably find it easier to use this new one than they would one constructed without any special reference to Andrews and Stoddard's. The prestige which the old grammar still enjoys will to some extent smooth the way for the introduction of the new one. But the time has gone by for any such phenomenal success as attended the publication of the original work; the rivals are too numerous and too excellent.

Reports on Elementary Schools, 1852-1882. By Matthew Arnold. Edited by the Rt. Hon. Sir Francis Sandford, K.C.B. Macmillan & Co. 1889.

Mr. Arnold's inspection of schools was no inconsiderable portion of his life work. Besides his tours of observation on the Continent, with the fruits of which educators have long been familiar, his services at home, extending from 1851 to 1886, covered his mature life continuously, and the more general portions of his successive Reports are reprinted in this volume. He was, from the start, an advocate of culture, of forming rather than informing the mind, and his long observation strengthened him in his opinion. In 1852 he expresses himself, in connection with the subject of pupil-teachers, as "much struck, in examining them towards the close of their apprenticeship, when they are generally at least eighteen years old, with the utter disproportion between the great amount of positive information and the low degree of mental culture and intelligence they exhibit. . . . I cannot but think that with a body of young men so highly instructed, too little attention has hitherto been paid to this side of education; the side through which it chiefly forms the character; the side which has perhaps been too exclusively attended to in schools for the higher classes, and to the development of which it is the boast of what is called classical education to be mainly directed." This is the text upon which a large proportion of the remaining Reports expand. Twenty years later he declares "the great fault" of elementary instruction to be that it "at most gives to a child the mechanical possession of the instruments of knowledge, but does nothing to *form* him." He regards this distinction as marking the barrier between the education of the upper and lower classes.

In matters of detail he pleads hard for the study of grammar. He praises it as an "exact" study, most useful at a period when a child's mind is naturally vague in its workings. "Grammar," he says, "is an exercise of the children's wits; all the rest of their work is in general but an exercise of their memory. To learn the definitions and rules of grammar is, indeed, but an exercise of memory, but, after learning the definition of a noun, to recognize nouns when one meets with them, and to refer them to their definition, that is an exercise of intelligence." For this reason he recommends the study of Latin, as well as in order to give a child a *second* language, which of itself is an incalculable benefit. He puts forth in connection with this his singular suggestion of a Latin text-book made up from the Vulgate, to the entire disregard of classical Latin. He objects very strongly to the system under which the efforts of the schools were directed to pass examination in fixed books, since it tended to make the mastery of these the only aim; the classes could read fluently what they had practised long, but could not read a new simple passage from another book with the same readiness. To examinations in general he had a hardly veiled dislike, so far as they were restricted to testing acquisitions of knowledge instead of acquisitions of power; the strain on the mind, he says, is much greater in storing up knowledge passively to be reproduced in examination than it is in any active mental work in which the mind itself contributes a share. He acknowledges, as all must, that the end of elementary education is primarily to give the power of reading, writing, and casting accounts. Of these the first is most important, but in 1878 he asserts that it "may be doubted whether this is not given more seldom" than the other two; "it is bestowed in much fewer cases than we imagine"; and he adds here and in other passages excellent advice on the matter of reading-books. He especially warns elementary teachers that Pestalozzi and other reformers are not to be too much yielded to; and humorously says that the result of these new systems is that "one sees a teacher holding up an apple to a gallery of little children, and saying, 'An apple has a stalk, peel, pulp, core, pips, and juice; it is odorous and opaque, and is used for making a pleasant drink called cider.'" He enumerates the branches necessary for children from eight to ten, as "reading, writing, arithmetic, poetry or poetic literature, grammar, geography, *Naturkunde*, and music." Other things, such as needlework, domestic economy, cookery, technical instruction, gymnastics, and drill, however important or necessary, and however the code may mix them up with mental training, should be kept by the teacher resolutely separate from it.

He seems to have been perpetually struck by the small vocabulary of the children. In one school of seventy children, in 1874, which had annual grants and pupil-teachers, "there was not one single child who knew the meaning of the word *feeble*." In 1880 he reports from London schools of children of twelve years who were able to pass well in reading, writing, and arithmetic, that they did not know what a *steed* was, and in a head class of thirty only one knew what a *ford* was. "I have ceased to feel surprise at any failure of that kind," he says, "so thoroughly has experience convinced me of the excessive scantiness of vocabulary, which is the rule amongst our school-children. It is the signal feature of their mental condition, and constitutes their real inferiority to the children of the cultivated classes." Scantiness of vocabulary means, of course, scantiness of ideas. In another school he reports that "not one child in the upper class had ever heard of the Stuarts, had ever heard of Charles the First, had ever heard that a King of England had had his head cut off." This was a girls' school, well-dressed, well-behaved, with high fees, age from eleven to thirteen. For defects of vocabulary, of mechanical education, and, in general, the worst features of the system, he continually recommends that poetry or poetic literature be made a part of the curriculum, or more attended to. He observes that the great merit of the system of classical education was that it brought the mind constantly in contact with masterpieces of literature; he thinks this should be done in English education also. He recommends Scott, provided the extract contains the climax of the interest, Gray's "Elegy," and some of Mrs. Hemans's short pieces for being committed to memory. The conditions of choice are that the poem "should have real beauties of expression and feeling, that these beauties should be such as the children's hearts and minds can lay hold of, and that a distinct point or centre of beauty and interest should occur within the limits of the passage learnt." He asserts, controverting Sir John Lubbock's report that science was the most popular study among the children, that by his observation poetry was most interesting. The high value he placed upon it is most fully expressed in the following passage:

"The acquisition of good poetry is a discipline which works deeper than any other discipline in the range of work of our schools; more than any other, too, it works of itself, is independent of the school-teacher, and cannot be spoiled by pedantry and injudiciousness on his part. Some people regard my high estimate of the value of poetry in education with suspicion and displeasure. Perhaps they may accept the testimony of Wordsworth with less suspicion than mine. Wordsworth says: 'To be incapable of a feeling of poetry, in my sense of the word, is to be without love of human nature and reverence for God.' And it is only through acquaintance with poetry, and good poetry, that this 'feeling of poetry' can be given. Good poetry does undoubtedly tend to form the soul and character; it tends to beget a love of beauty and truth in alliance together; it suggests, however indirectly, high and noble principles of action, and it inspires the emotion so helpful in making principles operative. Hence its extreme importance to all of us."

It should be said, however, that the extent to which poetry then entered into the studies of the schools was the memorizing and reciting of from one to two hundred lines. We give space to this suggestion because it is preëminently the main one which was enforced upon Arnold by his long and intimate acquaintance with the workings of elementary schools.

The Reports gain by being written in a more sober and unrhetorical style than belongs usually to this brilliant writer, and they are interesting from the number of minor topics of a practical nature touched upon. Those interested in education will find much of immediate value in the series, apart from the general view and the broad literary temperament which give its principal value. The attempt to raise the common schools to the plane of real mental cultivation of the old academies seems less hopeless after reading the volume, but the gap between the two systems is made too clear for comfort.

The Coming of the Friars, and Other Historic Essays. By the Rev. Augustus Jessopp, D.D., author of 'Arcady: for Better for Worse,' etc. G. P. Putnam's Sons. 1889. 8vo, pp. 344.

For several years past, students of social life in the Middle Ages have welcomed from time to time in the pages of the *Nineteenth Century* these graphic and instructive papers by Dr. Jessopp, based upon the original study of out-of-the-way documents, which we have before us at last gathered in a handsome volume. The papers are seven in number; besides that which gives a title to the volume, there are, "Village Life in East Anglia Six Hundred Years Ago," "Daily Life in a Mediæval Monastery," "The Black Death in East Anglia" (two papers), "The Building Up of a University," and "The Prophet of Walnut-Tree Yard." Taken together, they present a picture of the life and social environment of our ancestors—and East Anglia was peculiarly the home of the New England colonists—such as we believe cannot anywhere else be found. We know no-

thing to compare with it except Pauly's 'Pictures of Old England'; and Pauly, if a greater scholar than Dr. Jessopp, did not possess his direct personal interest in and associations with his subject.

Of these papers the last, which treats of Lodowick Muggleton, belongs to the seventeenth century; all the others are devoted to the Middle Ages, and especially to the thirteenth and fourteenth centuries. The account given here of the ravages and the effects of the Black Death, perhaps the most eventful pestilence in history, is no doubt the most careful study to which this event has been submitted in its details, and deserves to be read in connection with Mr. Rogers's discussion of its results, with which Dr. Jessopp's view does not agree in all particulars. To us the most attractive paper in the series is the second, which was read as a lecture in an East Anglian village, describing the life in a neighboring village in the thirteenth century, the fruits of rummaging in some boxes in Rougham Hall, containing "a complete apparatus for the history of the parish of Rougham from the time of Henry the Third to the present day—so complete that it would be difficult to find in England a collection of documents to compare with it" (p. 53). The conclusion drawn from the study of these documents is:

"The people who lived in this village six hundred years ago were living a life hugely below the level of yours. They were more wretched in their poverty; they were incomparably less prosperous in their prosperity; they were worse clad, worse fed, worse housed, worse taught, worse tended, worse governed; they were sufferers from loathsome diseases which you know nothing of; the very beasts in the field were dwarfed and stunted in their growth, and I do not believe there were any giants on the earth in those days. The death-rate among the children must have been tremendous. The disregard of human life was so callous that we can hardly conceive it. There was everything to harden, nothing to soften; everywhere oppression, greed, and fierceness. Judged by our moral standards, the people of our country village were beyond all doubt coarser, more brutal, and more wicked than they are" (p. 112).

But Dr. Jessopp's impressions are not wholly unfavorable. If village life was lower than we have been taught to believe, on the other hand, monastic life he believes to have been higher. "As a body, the monks of the thirteenth century were better than their age. Vicious and profligate, drunken and unchaste, as a class, they certainly were not. . . . On the other hand, the intense *esprit de corps* of a convent of monks went beyond anything that we can now realize, and led to grave sins against truth and honesty. The forgeries of charters, bulls, and legal instruments of all kinds for the glorification of its members was at least condoned only too frequently" (p. 160). The brief estimate which follows of the functions of the monastery in that age, from a social point of view, and the comparison with the modern club, which answers somewhat to the same needs, is interesting and ingenious. "Our modern monks look out at the windows of the Carlton and the Athenæum with no suspicion that they are at all like the monks of old. Nor are they. They lack the old faith, the old loyalty to their order, and, with the old picturesqueness, something else that we can less afford to miss—the old enthusiasm."

In the introduction to the lecture on village life, we read (p. 55): "They who are acquainted with Mr. Rogers's 'History of Prices' will observe that I have ventured to put forward views, on more points than one, very different from those which he advocates. Of the value of Mr. Rogers's compilation, and of the statistics which he has tabulated, there can be but one opinion. It is when we come to draw our inferences from such returns as these, and bring to bear upon them the side lights which further evidence affords, that differences of opinion arise among inquirers." One of these differences, we suppose, is in the judgment just passed upon village life in the Middle Ages: Mr. Rogers deduces his conclusions chiefly from figures—in these papers we get the side lights. Of his questioning some of Mr. Rogers's conclusions as to the effects of the Black Death we have already spoken.

Some of Dr. Jessopp's incidental observations are worth quoting: "St. Francis saw, and saw much more clearly than even we of the nineteenth century see it, that the parochial system is admirable, is a perfect system for the village; that it is unsuited for the town; that in the towns the attempt to work it had ended in a miserable and scandalous failure" (p. 47). "We are in the habit of saying, 'Those old monks knew how to build: look at their work, see how it stands!' But we are very much mistaken if we suppose that in the twelfth or the thirteenth or the fourteenth century there was no bad building. On the contrary, nothing is more common in the monastic annals than the notices of how this or that tower fell down, and how this or that choir was falling into ruins, and how this or that abbot got into debt by his mania for building" (p. 122).

The book is clearly and handsomely printed, but the proof-reading has not been done altogether well.

Cartas Americanas. Por Don Juan Valera. Primera Serie. Madrid: Fuentes y Capdeville; New York: *Las Novedades* Co. 1889. Pp. xii, 278.

NOVELS leap the barriers of foreign languages more easily than other forms of literature, and it is as a novelist that Valera is best known to English readers. His critical work, however, is probably what brings him more repute in Spain, where he is regarded as certainly the leading critic of his day and country, and as perhaps the best exponent of that modern intellectual movement in Spain which, while aiming at the broadest culture, and drinking deep of the spirit of the present, seeks to free the national literature from the reproach of being purely imitative, and to contribute something original and purely Spanish to the world's literary production. Valera's critical writings, at any rate, have reached a considerable bulk, numbering three volumes of 'Estudios Críticos,' two volumes of 'Disertaciones y Juicios Literarios,' one volume of 'Nuevos Estudios Críticos,' besides his 'Apuntes sobre el Nuevo Arte de escribir Novelas.' After the fashion of Sainte-Beuve's *Causeries du Lundi*, Valera has been for some time in the habit of printing literary and critical articles in the Monday issue of *El Imparcial*, and this last volume of his is made up of letters on Spanish-American literature published in the course of 1888.

The subject possesses great novelty even in Spain; it is on that ground that Valera justifies himself in publishing a work on it which is, he confesses, "ligerísimo." Rarely, he says, does a refluent tide bear back to Spain literary drift from her ancient colonies. Spanish publishing-houses find their best customers in Spanish America; but the trade is not reciprocal, and the books of Spanish-American authors seldom find their way to the mother country except as presentation copies or volumes in search of a review in the leading critical journals. The writings which Valera here discusses almost all came to him in one of those ways, and he continually laments his lack of a wider acquaintance with modern Spanish-American literature, about which he should not dare to write, he says, except with the object of "giving a moment's entertainment, if I can, and making public a little knowledge of which many honest folk are ignorant, and which they would not disdain to have brought to their notice."

The book opens with a dedicatory epistle to Cánovas del Castillo, which consists of an admirable sketch of the political and literary relations of Spain with the Spanish-American countries, before and since their independence. Political rupture came very near resulting in mental divorce, Valera thinks, owing to Spain's grudging and tardy recognition of Spanish-American independence, and to her various ambitious projects and wars for the recovery of her American prestige. During all this period of separation and growing jealousy, and even hate, was the opportunity of English culture to stamp itself upon the Spanish-American mind with a power equal to that with which English political ideas were lodged there. "If English culture had been more communicative, it would have penetrated the Spanish-American republics; but it is not communicative, and its influence was scarcely felt. That of France, on the contrary, given to invasion as it is, was powerfully exercised, and informed the intellectual movement, while stimulating the progress of Spanish America." This seems to us to be something of an exaggeration, in regard to the dearth of English influence, and not altogether a full account of the derivation of French influence, in South America. It would be hard to name a writer who has fecundated the best minds of South America more than Mill, and the influence of English poetry on the Spanish-American muse Valera himself more than once points out. It may well be doubted, too, if the predominance of French literature in Spanish America has been much more than a reflex of the state of things in Spain, where, as is well known, it fixed every literary fashion for years with a tyranny from which escape has yet been by no means made. So far from meaning hatred of Spain and the deliberate choice of a foreign literature, it may have meant only the continuance of the colonial custom of taking the tone slavishly from the mother country.

It is upon another opinion expressed in the dedicatory letter, however, that the American reader will fix his attention with the greatest interest, if not amazement. "In the natural and exact sciences," says this first critic of Spain, "and in industry and commerce, English America, independent first, has flourished most; but in letters, it may be said without boasting, both in quantity and in quality, Spanish America is superior to English America." Either this is so immense a mistake as to be ridiculous, or there are treasures of Spanish-American literature of which most of us have had no hint. There may be some truth in each of these suppositions. Certainly Valera is a man with a reputation to lose, and would not recklessly throw it away in wild assertions. If he does not display a profound acquaintance with our literature, he at least shows that he knows it as well as most of us know the writers of Spanish America. If it is a question of ignorance on one side or the other, the chances are that it lies with us more than with him. At any rate, he should not be condemned unheard, and in this book he makes a beginning in setting forth the evidence for the Spanish-American side of the comparison.

In "quantity" we may as well "acknowledge the corn." Mexico had printing-presses and

books by native authors, and an Academy, long before the Pilgrims landed. While we were still at our witch-burning stage, Chili was laying the foundations of a native dramatic literature. To come down to our own days, the 'Parnaso Colombiano,' published in 1886-87, contains extracts from the writings of more than a hundred poets who have flourished in the United States of Colombia during the past seventy years, besides sixteen poetesses. Well may Valera affirm, "Spanish America is very far from being intellectually barren." Turn to his account (p. 65) of the intellectual ferment now at work in Buenos Ayres, keeping pace with the city's wonderful material expansion, read his lists of names of Argentine historians and economists, archæologists and anthropologists, jurists and writers on international law, and we shall at least see that he is not speaking at random.

As to "quality," this book itself will greatly help to reassure us. Valera writes about the best Spanish-American literature that has fallen under his observation, especially about the best Spanish-American poetry. It is in lyrical and narrative poetry, he remarks, that the genius of Spanish America is most clearly seen to be Spanish in origin. Many long extracts from the leading poets find a place in his pages, on which he bestows much praise and much severe censure. It is not always easy to follow him in his admiration. This might easily be due to a lack of appreciation of the genius of Spanish poetry, and very likely is; but at least his criticisms hit off exactly an American's idea of the great and glaring faults of Spanish-American poetry, even at its best. He admits that it may be fairly charged with "exuberance." What he means by this appears in his remarks on Andrade, where he speaks of those poets who "escriben sin arte y allá corren desbocados, dando rienda suelta á su portentosa facilidad." And concerning that poetry which he praises most highly—the Colombian—he makes a remark which will go far towards restoring our complacence, saying: "En la poesía colombiana, en la más original, en la más castiza, en la más español, hay un vago perfume, un dejo sabroso de poesía inglesa, que yo celebro, por que le da un gusto verdadera y naturalmente sentimental y le conviene muy bien, refrenando la propensión á lo redundante y á lo hueco."

Perhaps enough has been said to indicate the nature and value of the book. If it is followed up, as Valera promises, with other volumes on the same subject, the result will be to bring into at least all the prominence it deserves a literature which, if it is unknown in Spain, is almost undreamed of here. The book makes very delightful reading. Many of the author's critical passages—as where he discusses the true function of descriptive poetry, or writes of the various sorts of "Prometheus" poems—are of the highest order. His range is large and his humor enjoyable. The 'Letters' are conceived in the most leisurely vein, and leave room for frequent excursions, such as, for example, remarks on the reading habits of Spaniards, and on female education in Spain, which fall out decidedly to the reader's pleasure.

BOOKS OF THE WEEK.

Annual Register, for the Year 1888. London: Rivingtons. 18 shillings.
Boldrewood, R. Robbery under Arms. Macmillan & Co. $1.25.
